PROCEEDINGS AND DEBATES OF THE 91st CONGRESS, FIRST SESSION

SENATE—*Tuesday, October 21, 1969*

The Senate met at 12 o'clock noon and was called to order by the President pro tempore.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God of all the earth, we thank Thee for the beauty of life about us, for the symphony of sound and color in the world of nature. And we thank Thee for the world within, deep and mysterious, which Thou hast made for Thy spirit. Keep our inner being so in harmony with the outward beauty, that the invisible and the visible world may be one in the kingdom of the spirit. With the passing of each day may we grow both in personal piety and in social righteousness. Give us wisdom to remove every discord between man and man, and all that blemishes the landscape of human existence. Make us strong to help others, banish poverty, eliminate injustice, and set up Thy kingdom of peace and good will among men. Be with those who serve in this place that America may lead in all that is beautiful and good and true.

In the Redeemer's name. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, October 20, 1969, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS AND JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that on October 17, 1969, the President had approved and signed the following acts and joint resolution:

S. 265. An act for the relief of John (Giovanni) Denaro;

S. 620. An act for the relief of Richard Vigil;

S. 1110. An act for the relief of Nickolas George Polizos;

S. 1836. An act to amend the Federal Seed Act (53 Stat. 1275), as amended;

S. 2564. An act to amend the act fixing the boundary of Everglades National Park, Fla., and authorizing the acquisition of land therein, in order to authorize an additional amount for the acquisition of certain lands for such park; and

S.J. Res. 150. Joint resolution to authorize the President to designate the period beginning October 12, 1969, and ending October 18, 1969, as "National Industrial Hygiene Week."

EXECUTIVE MESSAGES REFERRED

As in executive session, the President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S. 74. An act to place in trust status certain lands on the Standing Rock Sioux Indian Reservation in North and South Dakota;

S. 775. An act to declare that the United States shall hold certain land in trust for the Three Affiliated Tribes of the Fort Berthold Reservation, North Dakota; and

S. 921. An act to declare that certain federally owned land is held by the United States in trust for the Cheyenne River Sioux Tribe of the Cheyenne River Indian Reservation.

The message also announced that the House had passed the following bills of the Senate, each with an amendment, in which it requested the concurrence of the Senate:

S. 73. An act to amend the act entitled "An act to authorize the sale and exchange of isolated tracts of tribal land on the Rosebud Sioux Indian Reservation, South Dakota; and

S. 210. An act to declare that certain federally owned lands are held by the United States in trust for the Indians of the Pueblo of Laguna.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 4293. An act to provide for continuation of authority for regulation of exports;

H.R. 9163. An act to authorize the disposal of certain real property in the Chickamauga and Chattanooga National Military Park, Ga., under the Federal Property and Administrative Services Act of 1949;

H.R. 13767. An act to authorize the appropriation of funds for Fort Donelson National Battlefield in the State of Tennessee, and for other purposes; and

H.R. 14030. An act to amend section 358a (a) of the Agricultural Adjustment Act of 1938, as amended, to extend the authority to transfer peanut acreage allotments.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 11039) to amend further the Peace Corps Act (75 Stat. 612), as amended, and it was signed by the President pro tempore.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred, as indicated:

H.R. 4293. An act to provide for continuation of authority for regulation of exports; to the Committee on Banking and Currency.

H.R. 9163. An act to authorize the disposal of certain real property in the Chickamauga and Chattanooga National Military Park, Ga., under the Federal Property and Administrative Services Act of 1949; and

H.R. 13767. An act to authorize the appropriation of funds for Fort Donelson National Battlefield in the State of Tennessee, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 14030. An act to amend section 358a (a) of the Agricultural Adjustment Act of 1938, as amended, to extend the authority to transfer peanut acreage allotments; to the Committee on Agriculture and Forestry.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

NATIONAL LIBRARY OF MEDICINE

The bill clerk read the nomination of William O. Baker, of New Jersey, to be a member of the Board of Regents, Na-

tional Library of Medicine, Public Health Service, for a term of 4 years from August 3, 1969;

And of Jack Malcolm Layton, of Arizona, to be a member of the Board of Regents, National Library of Medicine, Public Health Service, for a term expiring August 3, 1973.

The PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of measures on the calendar, commencing with Calendar No. 478 and the succeeding measures in sequence.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE ON LABOR AND PUBLIC WELFARE URGES THE PASSAGE OF SIX BILLS TO IMPROVE HEALTH CARE FOR VETERANS—S. 1279, H.R. 693, H.R. 2768, H.R. 3130, H.R. 9334, AND H.R. 9634

Mr. YARBOROUGH. Mr. President, as chairman of the Labor and Public Welfare Committee, I am proud to recommend to the Senate six important veterans' bills which will greatly expand and improve the hospital, nursing home and outpatient care available to the men who have served our Nation in the military services. This is probably the largest package of veterans' medical care bills to be reported at any one time by the committee. I wish to commend all of my colleagues on the committee, both Democrats and Republicans, for their nonpartisan efforts with regard to these bills.

The committee urges the Senate to approve S. 1279, which would greatly ease the burden of those veterans who are former prisoners of war in establishing that the disabilities they suffer are service connected. More specifically, this bill would create a rebuttable presumption that any disability suffered by a former prisoner of war is service connected for purposes of that veteran's right to hospital and outpatient care. The committee recognizes that many veterans who are former prisoners of war have great difficulty in proving the origin of their disabilities because of incomplete or destroyed medical records. Unless there is a presumption in the veteran's favor, such as S. 1279 creates, a former prisoner of war in many cases would have an almost impossible task of qualifying for hospital and medical care.

At present there are approximately 115,000 former prisoners of war in the United States, not including those who are now imprisoned by North Vietnam. As a result of the harsh and often inhumane treatment these men have received, many of them suffer with physical and psychiatric disturbances which will be with them for the rest of their lives. The committee believes that because of the sacrifices these veterans have made for our country, they should not have the burden of proving the service connection for their disabilities.

The second bill which the committee urges the Senate to adopt is H.R. 693. This bill, as amended by the committee, would eliminate the requirement that a veteran who is in receipt of a Veterans' Administration pension sign a pauper's oath as a prerequisite to receiving hospital care for non-service-connected disabilities. This requirement that a veteran sign this onerous and degrading oath of poverty is a disgrace which has been allowed to exist for much too long a time. H.R. 693 is a positive step toward removing this stain from our veterans' laws. With the adoption of H.R. 693, approximately 194,869 veterans would be exempted from having to swear to this oath in order to obtain hospital and outpatient care.

A third bill which the committee recommends to the Senate is H.R. 2768. This bill would authorize community nursing home care for an unlimited period of time for those veterans hospitalized with service-connected disabilities. At present such veterans may stay in a community nursing home for only 6 months. Permission for a veteran to remain in a nursing home for longer than 6 months rests in the sole discretion of the Veterans' Administration. H.R. 2768 greatly expands the veterans community nursing home program which has proved to be so successful in the past.

The fourth bill favorably reported by the committee is H.R. 3130, which permits the Veterans' Administration to furnish medical service to a veteran having a service-connected disability whether or not the care is needed for that particular disability. This relieves the veteran of the burden of showing that he is seeking care for the disability known to be service connected, a medical question that is often disputable, and time consuming in determination. This present limitation on medical care to the precise disability that was incurred in service is unwarranted, and should be dropped, as this bill provides.

Fifth, the committee considered and favorably recommends H.R. 9334, to improve the care and treatment of veterans in State veterans homes. It raises the Federal payment per diem for each veteran from $3.50 to $7.50, and authorizes $5 million matching funds each year for 10 years, for remodeling or altering State home facilities. This bill will permit the renovation of many State veterans homes which desperately need it.

The final bill the committee recommends, H.R. 9634, authorizes the Veterans' Administration to enter into sharing arrangements with other hospitals so vital medical resources can be used where needed. More flexibility in the administration of personnel will permit the best use of interns, residents, and nurses within an area, rather than just for the particular Veterans' Administration hospital.

These bills are a great tribute to hard work and leadership the new chairman of the Veterans' Affairs Subcommittee, Senator CRANSTON. It is an honor for a new Senator to be chairman of any subcommittee in the Senate, and in the case of the Senator from California, we can thank him for the speed with which he mastered the subject matter of these bills and the complicated business of medical care and treatment for veterans.

The subcommittee and the full committee worked diligently and thoroughly. The reports attest to the detailed consideration given all six of these bills.

I urge their prompt enactment by the Senate. They will mean better, and more efficient health care for the Nation's veterans. I submit that these bills are a proper tribute to our veterans from a grateful nation.

Mr. CRANSTON. Mr. President, I rise in support of S. 1279, H.R. 693, H.R. 2768, H.R. 3130, H.R. 9334, and H.R. 9634. As chairman of the Veterans' Affairs Subcommittee of the Labor and Public Welfare Committee, I reported these bills from the Labor and Public Welfare Committee on October 17, 1969, under authority of the order of the Senate of October 16, 1969, with committee amendments in four of them. I commend all of these bills to the Senate.

One of these bills, H.R. 9634, contains minor administrative amendments to authorities governing the Veterans' Administration hospital and medical care program. This bill is explained in the committee report as follows:

EXPLANATION OF H.R. 9634

Sections 1, 2, and 3 incorporate the provisions of S. 2623 to amend 38 U.S.C. § 4114, to provide greater flexibility in the Veterans' Administration hospital and medical care program. The modifications these sections make would generally provide the Administrator of Veterans' Affairs with greater administrative discretion in the appointment of nurses, particularly in recruiting career nurses; in the Veterans' Administration internship and residency program by authorizing agreements for the central administration of the administrative and personnel aspects of the programs of those interns and residents serving part time in Veterans' Administration hospitals and part time in other non-Federal hospitals; and in the appointment of dentists of high academic and research standing on a temporary full-time or part-time basis.

More specific explanations of these three sections follow:

Section 1 of the bill provides for the amendment of section 4114(a)(3)(A) of title 38, United States Code, to authorize the temporary full-time appointment, for a period not to exceed 1 year, of persons who have completed a full course of nursing in a recognized school of nursing and are awaiting registration.

Nursing school graduates who are awaiting registration in a State are recruited for the purpose of ultimate career appointment as nurses in the Veterans' Administration following such registration. The ability of the Veterans' Administration to offer employment to them immediately upon graduation provides an invaluable source for recruiting career nurses. While most of these employees are registered and converted to career nurse appointments within 90 days of their employ-

ment, circumstances are such that this is not always possible. This can result from such reasons as State delay in processing registration applications, examination scheduling practices, and the inability of a candidate (e.g., illness) to be available on the scheduled date of an examination. In these situations, it is necessary that these employees be kept in an employment status if they are to be retained until they can become career nurses.

This legislative change would be of further assistance in meeting nursing needs of the medical program.

Section 2 of the bill would amend section 4114(b) of title 38, United States Code, to authorize the Administrator to enter into agreements for the central administration of interns and residency training and would allow him to expend appropriated funds for the purpose of paying to the central administrative body the costs involved for the periods during which the trainee serves with the Veterans' Administration.

Under present Veterans' Administration programs, there are three types of residents and interns: (1) those whose residency program is established and directed by a Veterans' Administration hospital and who although they may serve a portion of their residency in other hospitals, receive the entire amount of their stipends, fringe benefits, and leave privileges under Veterans' Administration regulations; (2) those whose residency program is established and directed by other than a Veterans' Administration hospital but who serve a portion of their residency in a Veterans' Administration hospital, receiving their stipends, fringe benefits, and leave privileges under Veterans' Administration regulations only for the periods they are serving in a Veterans' Administration hospital; and (3) those whose residency program is established and directed jointly by a Veterans' Administration hospital and one or more participating institutions and who serve on a rotating basis in the participating institutions, receiving their stipends, fringe benefits, and leave privileges under Veterans' Administration regulations only for the periods they are serving in a Veterans' Administration hospital. It is in the latter two types that administrative problems arise.

The movement of Veterans' Administration residency and internship programs toward professional unification with the programs of medical school hospitals continues to increase. The Advisory Subcommittee on Programs for Exchange of Medical Information, a subcommittee of the Special Medical Advisory Group, authorized by section 5055 of title 38, United States Code, recently passed the following resolution:

"The subcommittee is conscious of the fact that the geometric advances of medical science are moving beyond the capacity of the single hospital to provide all that is required to produce the best educated resident. Thus, with increasing frequency, the residency is becoming an educational endeavor shared by a group of hospitals. Each participating hospital must be convinced that the individual resident "belongs" to all and not just to the hospital in which he is physically present at the moment. For this reason, the Veterans' Administration is urged to do all in its power to create mechanisms which will provide the utmost flexibility in the scheduling and movement of residents between VA hospital and non-VA hospital. There should be no limitations of movement based upon distinctions of being on duty at the VA hospital or away from the VA hospital. Similarly every effort should be made to minimize differences in pay scales and in fringe benefits among hospitals grouped for residency training, to assure a total income to the resident commensurate with his education and provision of valuable service as a byproduct of his training as a resident. It is recommended, therefore, that in each VA-hospital-non-VA hospital(s) combination, local VA hospital management be permitted the utmost discretion and capability to establish pay rates and make scheduling arrangements appropriate for the local situation. This local adaptability will produce many individual variations in patterns of operation throughout the Nation, but this diversity will undoubtedly serve to "graduate" the type of residents which the Veterans' Administration and the Nation need critically."

To accomplish intern and residency training within the concept now growing more prevalent, the Veterans' Administration feels that it must more and more resort to the integrated type of training wherein the trainee will serve a portion of his time in a Veterans' Administration facility and may receive training in several other nongovernmental hospitals. This creates tremendous problems in that the pay, fringe benefits, and leave policies differ in the various institutions involved. Thus, when a trainee moves from one institution to another, it results in a great deal of confusion as to his entitlement to fringe benefits and leave. Moreover, it involves different rates of pay and there are routine delays, particularly while serving with the Veterans' Administration, as would be the case in any Federal agency, in receiving pay as a result of pay administration procedures. This situation can be remedied insofar as the nongovernmental hospitals are concerned and, in the past few years, the Veterans' Administration has been presented with more than 20 proposals for some type of accommodation which would permit it to participate in an intern or residency operation administered from a central point.

The Veterans' Administration feels, and the committee agrees, that participation in a centrally administered program would greatly enhance its ability to train medical personnel. Moreover, it would be less costly in that Veterans' Administration payments would be limited to those periods when the trainee is serving in the Veterans' Administration facility and the Veterans' Administration is receiving his service.

The five other bills are designed to expand and improve medical and hospital care benefits and facilities for the treatment of seriously disabled veterans.

Two of the House-passed bills, H.R. 2768 and H.R. 3130, were reported by the Labor and Public Welfare Committee without amendment. These bills are explained in the committee reports as follows:

EXPLANATION OF H.R. 2768

Section 620 of title 38, United States Code, authorizes the placement in a community nursing home at the Veterans' Administration's expense (generally for a period of 6 months), hospitalized veterans who are no longer in need of hospital care and whose primary requirements are for nursing care. This bill would authorize such community nursing home care of unlimited duration for veterans hospitalized for a service-connected disability. Service-connected veterans are admitted as a matter of right for their service-connected disabilities to all Veterans' Administration hospitals. Veterans with non-service-connected disabilities are admitted on a bed-available basis if unable to defray the necessary expenses.

Placement in community nursing homes under 38 U.S.C. § 620 has been a factor in bringing about the desired reduction of the workload of the Veterans' Administration hospital system. In the committee's view, the bill's provisions would further reduce that workload and also the cost for medical care for service-connected veterans in Veterans' Administration facilities. Cost of care for beneficiaries of this bill now ranges as high as $50 a day for hospital care in contrast to approximately $19.50 a day for community nursing care.

The committee is also of the view that the original intention of section 620, to aid the veteran and his family in making the transition from a hospital to his place in the community, should be expanded for veterans hospitalized with service-connected disabilities. Such a veteran should be entitled to all necessary nursing home care at Veterans' Administration expense as close as possible to his home community. Indeed, the longer the duration of his stay in a nursing home, the greater may be the veteran's need for location in his home community in order to permit visits by friends and relatives residing there. Unfortunately the location of Veterans' Administration operated nursing home beds does not in many cases permit a veteran to be near his home community.

The Veterans' Administration estimates that approval of this proposed legislation would increase the daily nursing care load in community nursing homes by approximately 350 at a cost of $1,500,000 annually.

As part of its consideration of H.R. 2768, the committee also considered H.R. 692, which the subcommittee had ordered reported to the full committee without recommendation. That bill, also amending section 620, would permit community nursing home confinements of 9, rather than the present 6, months. With the adoption of H.R. 2768 for service-connected veterans, the impact of H.R. 692 would be limited to veterans with non-service-connected disabilities. The full committee did not feel that favorable action on H.R. 692 was warranted in light of testimony from the Chief Medical Director, and the Director, Extended Care Service, of the Veterans' Administration that since establishment of the community nursing home program in 1965 only 302 requests for extensions beyond 6 months confinement were made from a patient population of over 25,000 and that 92 percent of them had been granted.

These officials also testified that the Veterans' Administration was "not reluctant" to grant these exceptions and did so "when there is medical and economic necessity" or "factors of humanity" (hearings, p. 64). However, VA regulation section 6051.1, which limits extensions to "circumstances of a most unusual nature such as when additional time is needed to complete imminent arrangements for other care," seems narrower than the testimony quoted above. In the committee's view, these regulations should be revised in accordance with the testimony. When that is done, the committee believes that extensions will be granted to those non-service-connected veterans for whom there is no other reasonable alternative to continuation of community nursing home care at Veterans' Administration expense beyond 6 months.

Finally, the committee was concerned that a blanket extension from 6 to 9 months of community nursing home care for non-service-connected veterans might, by virtue of budget limitations, significantly reduce the number of needy veterans who could receive any care in such facilities at Veterans' Administration expense.

EXPLANATION OF H.R. 3130

This measure would make available to any war veteran who has a permanent total disability resulting from a service-connected condition, complete medical services, which in effect means outpatient care for a non-service-connected disability.

Although outpatient treatment for veterans is generally restricted to service-connected disabilities under 38 U.S.C. § 612, the prehospital and posthospital care program now operative in the Veterans' Administration medical system applies in thousands of instances to non-service-connected cases. The "pre" system permits a workup prior to admission to a hospital; the "post" system

authorizes a followup of the care and treatment prescribed in the hospital.

The committee supports this bill for several reasons. First, it recognizes the need to provide the fullest possible medical care to veterans with service-connected disabilities. A veteran totally disabled by a service-connected condition should not be troubled with the necessity of trying to prove in particular cases that certain other conditions may be considered related to the service-connected disability. It is felt that their service-connected total disability status should entitle them to full medical care from the Veterans' Administration without need for investigation as to the exact relationship between their service-connected disability and other conditions. Second, the elimination of the need for such investigation will save the Veterans' Administration the often complicated and time-consuming task of making medical judgments as to whether certain conditions are related to or separate from a totally disabling service-connected condition. Third, substantial evidence exists to indicate that the extension of outpatient services to veterans such as this group would cause a further decline in the inpatient care program of the Veterans' Administration hospital system and would have an overall effect in reducing cost.

The Veterans' Administration estimates, however, that the enactment of this legislation would cost approximately $8 million the first year.

One of the House-passed bills, H.R. 9334, was reported by the Labor and Public Welfare Committee with a very minor amendment which is explained in the committee report. This bill is explained in the committee report as follows:

EXPLANATION OF H.R. 9334

Following the Civil War, a tier of Northern States built and operated State soldiers' homes which were for the care and treatment of Federal veterans of the War Between the States. Each home, naturally, set up its own criteria for admission and some homes permitted the veteran to bring his wife with him at the time he was admitted. Originally they were conceived as old soldiers' homes and provided largely domiciliary care. Lately they have developed into more sophisticated facilities, providing the full spectrum of care—domiciliary, hospital, and nursing. The program has expanded, in recent years, to cover homes constructed in Georgia, West Virginia, and Oklahoma.

Historically, the Federal Government has made a contribution for the care of each such State home veteran who is eligible under the provisions of title 38 for care in a Veterans' Administration hospital. That level of payment today stands at $3.50 per day for medical care and the same amount for hospital care; but a $5 rate is provided for nursing home care, the higher rate being justified because nursing home care has only recently been added to the State home system.

One of the provisions of Public Law 88-450 was to create this special rate for nursing home care for State homes, and in addition it authorized a $5 million yearly appropriation for 10 fiscal years through fiscal year 1974 to be used on a matching fund basis for the construction of new nursing home facilities. * * *

Section 1 of the bill would amend pertinent provisions of title 38 to increase the Federal payment for hospital care in a State home from $3.50 to $7.50. As a companion to the present continuing authorization of appropriations for the construction of State veterans nursing home facilities, section 2 of the bill would authorize a $5 million appropriation on a matching fund basis for 10 years to assist the States in remodeling and modifying or altering existing hospital and domiciliary facilities at State homes.

It should be borne in mind that domiciliary costs in the Veterans' Administration facilities now average $6.63 per day in contrast to $3.50 which the Government pays to a State home for similar care; that nursing care in a State home averages $5 per day, while the Veterans' Administration figure on an average is $15.60 per day in its own facilities and for a community nursing home, $13.24. If the proposed hospital rate of $7.50 is enacted into law, this will contrast with a VA cost of $21.63 a day for psychiatric hospitals and $40.90 for care in a general hospital.

The committee received testimony indicating that many existing State home facilities had been constructed around the turn of the century and were in desperate need of renovation. Testimony also was provided that at least 16 States presently have plans for alterations, expansion, or modernization of present facilities. The matching Federal funds that could be made available under this bill should prove an accelerating factor in these plans. Thus, there would seem to be a clear need for matching Federal participation in raising the capital for making the necessary renovations.

The Veterans' Administration estimates that the first-year cost of the bill would be $2,803,000. This would be increased by $2,500,000 in 1971 because of the funds for remodeling and alteration and another $2,500,000 in 1972 for the same reason.

Two of the bills, S. 1279 and H.R. 693, were reported by the Labor and Public Welfare Committee with amendments of some significance. These amendments are fully explained in the reports on those bills. I wish to commend the Senator from New Mexico (Mr. MONTOYA) for his introduction of S. 1279 to assist former prisoners of war in claims for hospital and medical care from the Veterans' Administration. The committee amendment carries out the essential purpose of the bill as introduced by Senator MONTOYA.

S. 1279 and H.R. 693 are explained in the committee reports as follows:

EXPLANATION OF S. 1279

The bill, as amended by the committee, would establish, for the purposes of chapter 17 of title 38, United States Code, relating to hospital, domiciliary, and medical care for veterans, a rebuttable presumption that any disability from which a veteran of any war, or of service after January 31, 1955, is suffering is service connected where any one of the following three conditions is met:

(1) When the Veterans' Administration is not, within a reasonable period of time, able to locate and examine any medical records covering such a veteran's active duty service during any particular tour of duty—that is, where there has been an enlistment and a discharge, or a discharge and a new enlistment or tour of duty. It is important to note in connection with this category that the absence of records must be total and that it is not intended by the committee that the creation of this category should open the door to claims that records for particular alleged medical conditions are absent and that the presumption should thus obtain. Rather, there should be relatively little, if any, dispute as to which cases fit this category—namely, those in which the Veterans' Administration calls for the file of a veteran for a particular tour of duty and no medical records for that tour of active duty are forthcoming. Although the committee considered the possibility of extending the presumption to cover cases in which no medical records were available for any substantial portion of service, this was rejected as impracticable in light of military record-keeping practices. Since no regular (for example, monthly) positive entries are required on a serviceman's medical record, such a provision would inevitably lead to numerous claims of missing records for particular illnesses or injuries, and the Veterans' Administration would be required to spend significant time just determining whether the burden of proof should be shifted.

(2) When the Veterans' Administration is not able, within a reasonable period of time, to locate and examine the medical record of any separation physical examination which was required to be conducted by law or regulation in effect at the time of or shortly before separation of the veteran. Again, the absence of this key record should be readily ascertainable and should not serve to proliferate claims that the presumption be raised. It is the committee's understanding that separation physical examinations are generally required for servicemen who have served at least 30 days of active duty or active duty for training unless they are being separated for immediate enlistment.

(3) When the veteran in question was a prisoner of war or was forcibly detained or interned in line of duty by a foreign government or power. With respect to claims by former prisoners of war, it is the committee's understanding that the Veterans' Administration already awards to them the most expeditious treatment and medical examinations as well as the benefit of the doubt on medical interpretations. This provision of the bill would codify the benefit of the doubt as a rebuttable presumption. At the same time, this provision is not intended in any way to alter or replace the expeditious handling of such cases currently required in Veterans' Administration regulations.

In the case of those veterans who were not held during a "period of war" as defined in 38 U.S.C. 101(11) (such as during the post-Korean conflict (after January 31, 1955) and before the Vietnam era began (on August 5, 1964), the "line of duty" concept is intended to exclude the same category of cases which would generally be excluded for workmen's compensation purposes when an employee is clearly on "a frolic of his own." This would include misconduct or disobedience of orders such as being absent without leave (AWOL). Generally, servicemen on authorized leave would be entitled to the benefit of the presumption if captured during that period by a foreign government or power or a force purporting to act in the name of such government or power.

The committee is aware of the provision of 38 U.S.C. 354(b) that veterans of combat with the enemy shall have resolved in their favor all reasonable doubts with regard to claims of service connection of any disease or injury. However, the committee believes that in cases in which the unavailability of records, through no fault of his own, virtually precludes a veteran from successfully carrying the burden of proving service connection, the law should affirmatively relieve him of that burden. Thus, in the three enumerated circumstances, the burden would be shifted to the Veterans' Administration, and it would have to disprove service connection.

In introducing this bill, Senator Montoya, its principal sponsor, estimated that somewhat less than 115,000 former prisoners of war (not including those presently held by the North Vietnamese) are now living and that many already have disabilities which are rated as service connected. He also stressed at that time and later in testimony before the committee, the very serious nutritional deficiencies and psychiatric disturbances resulting from such imprisonment which may plague a former prisoner of war for the rest of his life and which may many years after discharge be manifested by new symptoms difficult to prove as having arisen out of service. The committee agrees that, in light of the extensive sacrifices many of these men have been called upon to make for their country, they should be relieved of the bur-

den of proving service-connection for their disabilities.

This statutory recognition of the special medical problems of prisoners of war is recognized in present law in 38, U.S.C. 612(b)(3) which provides for furnishing of outpatient dental services and treatment and related dental appliances to former prisoners of war.

The presumption provided by the committee amendment has been made rebuttable rather than conclusive so as to preclude successful claims of service connection for disabilities resulting from conditions clearly arising before or after and independent of service. There are a number of precedents for raising such presumptions. For example, for purposes of disability compensation under 38 U.S.C. 311, there is a rebuttable presumption of sound medical condition upon enrollment in military service; and for the same purposes under sections 312 and 313 certain diseases—Chronic, tropical, tuberculosis, multiple sclerosis, and Hansen's disease—manifesting themselves after service under certain conditions are rebuttably presumed to have been service conncted in their origins. By contrast, the section amended by the bill, section 602, presently raises a *conclusive* presumption of service connection for any active psychosis developed within 2 years of discharge.

The Veterans' Administration estimates the total first-year cost of this bill for the former prisoners of war (not including those presently held as prisoners of the North Vietnamese or listed as missing in action) as approximately $1,017,000 including approximately $215,000 in administrative costs. Because of the uncertainty of the number of veterans who would apply for the benefit of the presumption under the first two categories, it is impracticable to make a precise estimate of the annual cost for those categories. However, there is no reason to believe that these categories would entail substantial expenditures.

EXPLANATION OF H.R. 693

Section 1 of the bill would provide that a veteran who is in receipt of a Veterans' Administration pension would no longer be required to sign, under oath, a statement of inability to defray the necessary expenses of hospital or domiciliary care in order to gain admission to a Veterans' Administration hospital for a non-service-connected disability. Presently, veterans with service-connected disabilities are admitted to Veterans' Administration hospitals and domiciliaries as a matter of right; but non-service-connected veterans must complete an oath of inability to defray necessary expenses, which under 38 U.S.C. § 622 is required to be accepted by the Veterans' Administration as sufficient evidence of such inability. The oath form which non-service-connected veterans must complete also includes a number of questions regarding financial data.

Although under present Veterans' Administration practice veterans receiving non-service-connected pensions need not complete the financial data items, they are still required to swear or affirm to the oath. The committee believes that such an oath is entirely superfluous for such pensioners whose financial need has already been verified for pension purposes.

The House-passed bill premised the exemption on an age test (72 years or older), thereby eliminating a needs test for care for non-service-connected conditions of such veterans. The committee's amendment to substitute a pension test would apply to considerably more veterans than the age test. Based on the number of VA patients discharged from VA and non-VA hospitals in 1968, the age test would exempt from taking the oath 110,056 non-service-connected veterans who were 72 years or older. Based on these same figures, the amended section 1 using a pension test would cover 194,869 such non-service-connected veterans and would fail to cover only 17,232 non-service-connected veterans 72 years of age and over who were not in receipt of pensions.

Thus, the pension yardstick would apply to 84,813 individual veterans whose neediness had clearly been established and who would not be covered by the age test, and would extend coverage to approximately 67,581 more veterans than the House-passed provision. Whereas the House-passed measure would have an estimated first-year cost of $1,825,000—since it is expected that some veterans 72 years or older presently unwilling or unable to subscribe to the oath would receive Veterans' Administration hospital or domiciliary care—the pension test adopted by the committee would entail no additional expenditures.

The committee also gave considerable attention to the form of the oath and income questions . . . [on the] . . . present oath form (VA form 10–P–10 (November 1966)).

As a result of its review, the committee believes that items 36A through 40 on page 2 of the form (regarding valuation of residential property, mortgages or other indebtedness, all real and personal property, and estimates of average monthly net income and personal expenditure) needlessly invade the privacy of the non-service-connected veteran, especially at a time when the reason for his completing the form is that he is in need of medical assistance.

In addition, the committee believes that inquiry regarding these items is not fully consistent with the intent of the section 622 requirement that the oath of inability to defray necessary expenses be conclusive on that question for admission to VA facilities. These items would seem justifiable for one of three reasons or for a combination thereof: (1) to discourage the veteran from taking the oath; (2) to render him liable to Federal prosecution for false statement of a material fact (18 U.S.C. § 1001); or (3) to assist the veteran in determining ability or inability to pay. The committee finds only the third purpose to be appropriate in light of section 622. Moreover, recent studies of persons taking similar oaths (for welfare purposes) indicate that people are just as apt to be truthful when taking the oath without a requirement for full income disclosure as when taking the oath followed by full financial investigation.

Consequently, the committee is of the view that items 36A through 40 on the form should be deleted or prefaced by a statement in large print to the following effect:

"You need not complete any or all of the following items in order to receive Veterans' Administration hospital or domiciliary care. These items are set forth for whatever assistance they provide you in determining whether or not you wish to subscribe to the oath of inability to defray the necessary expenses of such care."

Finally, the committee is also of the view that the notarization requirement be eliminated under item 45. Section 622 does not require such a degree of formality, and the committee is not aware that any similar notarization is required on other Veterans' Administration forms, such as the income questionnaire for pension or dependency and indemnity compensation purposes. And no such notarization is required for subsequent criminal prosecution under 18 U.S.C. § 1001 or civil liability under the False Claims Act (31 U.S.C. § 231, *et seq.*). A standard certification of "true and correct to the best of my knowledge and belief" would be more in keeping with standard Government forms.

Section 2 of the bill authorizes the Administrator to furnish outpatient care and such other medical services as he finds to be reasonably necessary to any veteran who is in receipt of pension or compensation based on need of regular aid and attendance or who is permanently housebound. Inasmuch as care for service-connected veterans in this category is already administered on the most liberal basis, the only substantial change would occur in the pension field and is restricted to those individuals who are the most severely disabled and in demonstrated financial need. The aid and attendance group is so helpless or blind as to need the regular aid and attendance of another person. The housebound are so disabled as to require them to remain in their homes constantly.

Section 3 would authorize the furnishing of drugs and medicine at Veterans' Administration expense to those veterans who are receiving additional compensation or pension by reason of being permanently housebound. As with the amendment made by section 2, the basic change effected by section 3 would be in the pension field since, under present law, drugs and medicine prescribed by a physician are furnished to veterans for their service-connected disabilities. They are also furnished to the veteran during periods of hospitalization and during periods of prehospital and posthospital care regardless of whether his disability or disease is service-connected or nonservice-connected in character. In addition, under existing law, pensioners who are in need of regular aid and attendance are furnished drugs and medicine prescribed by a physician. By providing for the furnishing of drugs and medicine at Veterans' Administration expense to veterans receiving additional pension by reason of being permanently housebound, section 3 seems to the committee a logical extension of the above provisions to a demonstrably needy group of seriously disabled veterans.

Section 1 of the bill, providing for admission of veterans in receipt of pension to a Veterans' Administration hospital or domiciliary without subscribing to the oath of inability to pay is estimated not to entail any additional expenditures. Section 2, providing outpatient care for aid and attendance pensioners and the housebound group of pensioners would cost approximately $9,503,000 the first year; and section 3, authorizing the furnishing of drugs and medicine for the housebound pensioners would cost $3,400,000 the first year.

Testimony on these bills was heard by the Subcommittee on Veterans' Affairs on July 17, and the subcommittee considered the bills and reported them to the full committee on October 2 in the form in which the full committee, on October 9, ordered them reported to the Senate. I urge all of my colleagues to join in the bipartisan spirit which pervaded the subcommittee's and full committee's consideration and unanimous action on these bills.

Mr. SCHWEIKER. Mr. President, I rise in support of the pending bills H.R. 693, H.R. 2768, H.R. 3130, H.R. 9334, H.R 9634, and S. 1279. These bills represent an important contribution to the welfare of veterans who need medical care and domiciliary care. All of these bills were approved by the Subcommittee on Veterans' Affairs and by the full Committee on Labor and Public Welfare without a dissenting vote.

As ranking minority member of the subcommittee, I had the privilege to work in a most cordial and bipartisan manner on this legislation with the chairman of the subcommittee, the able and distiguished junior Senator from California.

H.R. 693 would eliminate the so-called pauper's oath for about 195,000 non-service-connected veterans on pensions who might seek hospital or domiciliary care at the expense of the Veterans' Administration. The bill as passed by the House would have exempted all non-

service-connected veterans over 72 from the means test or pauper's oath. However, our subcommittee agreed that all non-service-connected veterans receiving pensions, regardless of their age, should be spared from the means test, since they have already had to meet this test to draw a pension. So we have amended the bill to accomplish that.

Other provisions of H.R. 693 would assist some 144,000 veterans who are on pensions or other compensation due to their regular need for regular aid and attendance, or who are permanently housebound. H.R. 693 would see that these veterans received outpatient care, drugs and medicines at VA expense.

H.R. 2768 eliminates the 6-month limitation on length of community nursing home care extended to veterans with service-connected disabilities.

H.R. 3130 would assist veterans with a total disability resulting from duty in the Armed Forces, by providing these veterans with outpatient medical care for their non-service-connected disabilities.

H.R. 9334 will increase the Federal payment for hospital care in a State veterans home from $3.50 a day per patient to $7.50 per day. It will also authorize an annual $5 million appropriation on a matching fund basis to help States improve the physical facilities at State veterans homes over the next 10 years.

In this regard, I am pleased that the State veterans home in my home State of Pennsylvania, the Pennsylvania Soldiers' and Sailors' Home located in Erie, would be one potential recipient of this construction aid, since it is considering adding 175 beds to its present capacity of 285 beds.

H.R. 9634 would provide for the Administrator of Veterans' Affairs greater flexibility in operating the hospital and medical care programs of the Veterans' Administration. It authorizes the use of shared specialized medical resources of other hospitals, and it allows more flexible personnel policies in the recruiting of nurses, interns, and dentists. This bill has been requested by the Veterans' Administration itself in the interest of furthering its medical programs.

Finally, S. 1279 will add to the law a presumption that a former prisoner of war's disability is service connected. This will put the disability of a former prisoner of war, or any other veteran whose medical records are not available, in the status of a service-connected disability unless the VA can rebut the presumption by its own evidence.

Mr. President, I am pleased to give my full support to this measure to give former prisoners of war an additional degree of access to the medical care programs of the VA. Unfortunately, America today still finds herself at war, and there are American prisoners of war being held by the enemy in Vietnam. The legislation today that I urge the Senate to pass, S. 1279, is one small measure of the obligation which our Nation owes to its returning prisoners of war, both those who have already returned and those who, we hope and pray, will return in the future.

Mr. President, all of these six pending bills merit the favorable attention of the Senate. They will strengthen the medical and hospital programs being carried on by the Veterans' Administration, so that veterans in need of help will have easier access to it. I urge that the Senate act promptly to pass H.R. 693, H.R. 2768, H.R. 3130, H.R. 9334, and S. 1279.

MEDICAL BENEFITS FOR OLDER VETERANS

The Senate proceeded to consider the bill (H.R. 693) to amend title 38 of the United States Code to provide that veterans who are 72 years of age or older shall be deemed to be unable to defray the expenses of necessary hospital or domiciliary care, and for other purposes, which had been reported from the Committee on Labor and Public Welfare, with amendments, on page 1, line 7, after the word "the", strike out "Administrator may not require any statement under oath from an applicant referred to therein who is seventy-two years of age or older for the purpose of determining inability to defray necessary expenses, and such applicant shall be deemed to be unable to defray the expenses of necessary hospital or domiciliary care", and insert "receipt of pension under any law administered by the Veterans' Administration shall constitute sufficient evidence of inability to defray necessary expenses, and any veteran in receipt of such pension shall be exempt from making any statement under oath regarding his inability to defray necessary expenses."; and, on page 2, after line 23, strike out:

SEC. 4. Subsection (a) of section 610 of title 38, United States Code, is amended (1) by striking out "and" at the end of clause (2); (2) by striking out the period at the end of clause (3) and inserting in lieu thereof "; and"; and (3) by adding at the end thereof the following:

"(4) any veteran for a non-service-connected disability if such veteran served in the active military or naval service in Mexico, on the borders thereof, or in the waters adjacent thereto during the period beginning on May 9, 1916, and ending on April 6, 1917."

SEC. 5. (a) The provisions of section 201 of the Revenue and Expenditure Control Act of 1968 shall not apply with respect to employees of the Veterans' Administration and such employees shall not be taken into account in applying the provisions of such section to the other departments and agencies of the executive branch.

(b) Section 4 of the Act entitled "An Act to amend title 38 of the United States Code to provide nursing home care and contract hospitalization for certain veterans living in Alaska and Hawaii, and for other purposes", approved October 21, 1968 (Public Law 90-612, 82 Stat. 1202), is hereby repealed.

(c) Subsections (a) and (b) of this section shall take effect on the date of the enactment of this Act.

The amendments were agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended, so as to read: "An act to amend title 38, United States Code, to provide that veterans who are in receipt of pension shall be deemed unable to defray the expenses of necessary hospital or domiciliary care, and for other purposes".

NURSING HOME CARE FOR SERVICE-CONNECTED VETERANS

The bill (H.R. 2768) to amend title 38 of the United States Code in order to eliminate the 6-month limitation on the furnishing of nursing home care in the case of veterans with service-connected disabilities was considered, ordered to a third reading, read the third time, and passed.

OUTPATIENT CARE FOR CERTAIN SERVICE-CONNECTED VETERANS

The bill (H.R. 3130) to amend title 38, United States Code, to provide that the Administrator of Veterans' Affairs may furnish medical services for non-service-connected disability to any war veteran who has total disability from a service-connected disability was considered, ordered to a third reading, read the third time, and passed.

CARE OF VETERANS IN STATE HOMES

The Senate proceeded to consider the bill (H.R. 9334) to amend title 38, United States Code, to promote the care and treatment of veterans in State veterans' homes which had been reported from the Committee on Labor and Public Welfare, with an amendment, on page 3, after line 15, strike out:

SEC. 3. Section 5034(1) of title 38, United States Code, is amended by striking out "one and one-half" and inserting in lieu thereof "three".

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

SHARING PROGRAM OF AND EMPLOYMENT OF CERTAIN PROFESSIONAL PERSONNEL IN THE DEPARTMENT OF MEDICINE AND SURGERY, VETERANS' ADMINISTRATION

The Senate proceeded to consider the bill (H.R. 9634) to amend title 38 of the United States Code in order to improve and make more effective the Veterans' Administration program of sharing specialized medical resources which had been reported from the Committee on Labor and Public Welfare, with amendments. On page 1, after the enacting clause, insert:

That section 4114 of title 38, United States Code, is amended by inserting in subsection (a)(3)(A) immediately after the first sentence thereof the following: "Temporary full-time appointments of persons who have successfully completed a full course of nursing in a recognized school of nursing, approved by the Administrator, and are pending registration as a graduate nurse in a State, shall not exceed one year."

On page 2, after line 2, insert a new section, as follows:

SEC. 2. Section 4114 of title 38, United States Code, is amended by deleting "(b)" at the beginning of subsection (b) and inserting in lieu thereof "(b)(1)" and by adding the following new paragraph:

"(2) In order to more efficiently carry out the provisions of paragraph (1) of this sub-

section, the Administrator may contract with one or more hospitals, medical schools, or medical installations having hospital facilities and participating with the Veterans' Administration in the training of interns or residents to provide for the central administration of stipend payments, provision of fringe benefits, and maintenance of records for such interns and residents by the designation of one such institution to serve as an agency for this purpose. The Administrator may pay to such designated central administrative agency, without regard to any other law or regulation governing the expenditure of Government moneys either in advance or in arrears, an amount to cover the cost for the period such intern or resident serves in a Veterans' Administration hospital of (A) such stipends as fixed by the Administrator pursuant to paragraph (1) of this subsection, (B) hospitalization, medical care, and life insurance, and any other employee benefits as are agreed upon by the participating institutions for the period that such intern or resident serves in a Veterans' Administration hospital, (C) tax on employers pursuant to chapter 21 of the Internal Revenue Code of 1954, where applicable, and in addition, (D) an amount to cover a pro rata share of the cost of expense of such central administrative agency. Any amounts paid by the Administrator to such fund to cover the cost of hospitalization, medical care, or life insurance or other employee benefits shall be in lieu of any benefits of like nature to which such intern or resident may be entitled under the provisions of title 5 of the United States Code, and the acceptance of stipends and employee benefits from the designated central administrative agency shall constitute a waiver by the recipient of any claim he might have to any payment of stipends or employee benefits to which he may be entitled under this title or title 5 of the United States Code. Notwithstanding the foregoing, any period of service of any such intern or resident in a Veterans' Administration hospital shall be deemed creditable service for the purposes of section 8332 of title 5 of the United States Code. The agreement may further provide that the designated central administrative agency shall make all appropriate deductions from the stipend of each intern and resident for local, State, and Federal taxes, maintain all records pertinent thereto and make proper deposits thereof, and shall maintain all records pertinent to the leave accrued by each intern and resident for the period during which he serves in a participating hospital, including a Veterans' Administration hospital. Such leave may be pooled, and the intern or resident may be afforded leave by the hospital in which he is serving at the time the leave is to be used to the extent of his total accumulated leave, whether or not earned at the hospital in which he is serving at the time the leave is to be afforded."

On page 4, line 7, insert a new section, as follows:

SEC. 3. Section 4114 of title 38, United States Code, is amended by inserting in subsection (d)(1) immediately after the word "physician" the following: "or dentist".

And, at the beginning of line 11, strike out "That section" and insert "SEC. 4. Section".

The amendments were agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended, so as to read: "An act to amend title 38, United States Code, to authorize the Administrator of Veterans' Affairs to appoint certain persons in the nursing service in the Department of Medicine and Surgery of the Veterans' Administration and to enter into agreements with hospitals, medical schools, or medical installations for the central administration of a program of training for interns or residents, to improve and make more effective the Veterans' Administration program of sharing specialized medical resources, and for other purposes."

REBUTTABLE PRESUMPTION OF SERVICE CONNECTION FOR DISABILITIES OF CERTAIN VETERANS UNDER CERTAIN CIRCUMSTANCES

The Senate proceeded to consider the bill (S. 1279) to provide that any disability of a veteran who is a former prisoner of war is presumed to be service-connected for purposes of hospitalization and outpatient care which had been reported from the Committee on Labor and Public Welfare, with an amendment, strike out all after the enacting clause and insert:

That (a) section 602 of title 38, United States Code, is amended by inserting "(a)" immediately before "For"; and by adding a new subsection as follows:

"(b) For the purposes of this chapter, the disability of any veteran of a war or of service after January 31, 1955, shall be deemed to be service-connected if—

"(1) there are no medical records available to the Veterans' Administration for the period of such veteran's active military, naval, or air service;

"(2) there is no medical record available to the Veterans' Administration for such veteran showing the results of any physical examination which was required by law or regulation, in effect at the time of such veteran's discharge or release from active duty, to be given members of the Armed Forces immediately prior to discharge or release from active duty; or

"(3) for any period of time during his active military, naval, or air service such veteran (A) was held as a prisoner of war, or (B) while in line of duty was forceably detained or interned by a foreign government or power;

unless the Administrator can show by clear and convincing evidence that such disability was not incurred in or aggravated in line of duty by such veteran while serving in the active military, naval, or air service."

(b) The catch line of section 602 of title 38, United States Code, is amended to read as follows:

"§ 602. Presumption relating to certain disabilities".

(c) The table of sections at the beginning of chapter 17 of title 38, United States Code, is amended by striking out

"602. Presumption relating to psychosis."

and inserting in lieu thereof

"602. Presumption relating to certain disabilities.".

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill to create a rebuttable presumption that a disability of a veteran of any war or certain other military service is service connected under certain circumstances".

AUTHORIZATION TO PRINT THREE HOUSE BILLS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the bills H.R. 693, H.R. 9334, and H.R. 9634 be printed in full as passed.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXPRESSION OF APPRECIATION ON PASSAGE OF VETERANS BILLS

Mr. CRANSTON. Mr. President, it is a particular pleasure and privilege for a freshman Senator to see the Senate pass legislation originating in a subcommittee which he chairs. This was made possible only because of the outstanding cooperation and assistance of many Senators to whom I would now like to express my personal thanks.

First, I wish to think the distinguished majority and minority leaders for their cooperation in securing such speedy passage of the six bills—S. 1279, H.R. 693, H.R. 2768, H.R. 3130, H.R. 9334, and H.R. 9634—which were just passed by the Senate.

I wish also to express my appreciation to all of the members of the Veterans' Affairs Subcommittee and of the full Committee on Labor and Public Welfare for their bipartisan support of these measures.

Next, I wish especially to express my gratitude to the chairman of the Labor and Public Welfare Committee, Senator RALPH W. YARBOROUGH, who is also the ranking majority member of the Veterans' Affairs Subcommittee. Senator YARBOROUGH has labored vigorously to see this legislation through the subcommittee and the full committee and has in every respect been true to his reputation as the Senate's foremost champion of legislation to aid the veterans of this Nation.

Finally, and certainly not least in my gratitude, I wish to thank the Senator from Pennsylvania (Mr. SCHWEIKER) the ranking minority member of the Veterans' Affairs Subcommittee. Senator SCHWEIKER has exhibited a great bipartisan spirit in the consideration of these bills by the subcommittee and the full Labor and Public Welfare Committee.

THE VIETNAM MORATORIUM

Mr. AIKEN. Mr. President, after the so-called moratorium of October 15, I received approximately 300 letters from Vermont, largely from young people attending college. Ninety-nine out of 100 of these young people were very conscientious and well meaning, and of course they urged an immediate termination of the war in Southeast Asia.

I felt that they were entitled to know the facts as I saw them, and I prepared a letter to send to each of them. Then it occurred to me, instead of sending 300 letters to these young people, I might as well make a statement for the RECORD so that others, besides the students, could also know the facts of the situation as I see them to be today.

Just 3 years ago on October 19, 1966, I urged President Johnson to withdraw

our military personnel from South Vietnam.

At that time our troops there numbered 313,000.

The military situation was relatively well in hand and it was virtually certain that no outside nation could take over the country.

The President did not see things as I did and continued to send additional troops to South Vietnam until by the time President Nixon assumed office on January 20, 1969, they numbered approximately 550,000.

Soon after taking office, the President decided to withdraw a substantial part of our troops from Vietnam.

As of October 16, there were 501,000 remaining there, with the speed of withdrawal accelerating.

Unless the unexpected happens, I expect that practically all of our ground troops will be withdrawn by a year from now.

Some of the unexpected things that might happen would be a step-up of military aid, intervention in the war by another country, or violent upsurge of war on the part of the North Vietnamese and the Vietcong.

While we all wish withdrawal could be done immediately, the movement of all our personnel and equipment poses a tremendous transportation problem.

Further than that, however, is the fact that the safety of minority groups must be assured, unless we are now willing to assume responsibility for wholesale massacre.

I have been kept well informed from my own sources as to the progress of the President's withdrawal policy and feel that it is progressing on schedule, except for the loss of possibly a month in late summer.

North Vietnam, the Vietcong, South Vietnam, and the United States now appear to realize the futility of continuing an American war which never should have been started.

The only people—in this country—who now oppose our withdrawal appear to be our own minority group who look upon war as the solution to all our problems and visualize the United States as the dominant nation.

As for the moratorium of October 15, I doubt that it will change the President's policy because of the physical and political difficulties involved.

However, the moratorium has not done any harm, and it might even strengthen the President's hand in dealing with the pressure groups who hold that the war should go on until complete military victory is achieved.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following communication and letters, which were referred as indicated:

PROPOSED AMENDMENTS TO THE BUDGET, FISCAL YEAR 1970, LEGISLATIVE BRANCH (S. DOC. NO. 91–37)

A communication from the President of the United States, transmitting proposed amendments to the budget for the fiscal year 1970, in the amount of $4,316,319, for the legislative branch (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

REPORT ON CANCELLATION OF REIMBURSABLE IRRIGATION CHARGES

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a report on cancellation of reimbursable charges against individual Indians or tribes of Indians, dated October 23, 1968 (with an accompanying report); to the Committee on Interior and Insular Affairs.

REPORT OF THE FOUNDATION OF THE FEDERAL BAR ASSOCIATION

A letter from the Secretary of the Foundation of the Federal Bar Association, transmitting, pursuant to law, its annual audit report, dated September 30, 1969 (with an accompanying report); to the Committee on the Judiciary.

THIRD PREFERENCE AND SIXTH PREFERENCE CLASSIFICATION FOR CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports relating to third preference and sixth preference classification for certain aliens (with accompanying papers); to the Committee on the Judiciary.

FORMULA GRANTS TO SCHOOLS OF PUBLIC HEALTH

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to extend for an additional period the authority to make formula grants to schools of public health (with an accompanying paper); to the Committee on Labor and Public Welfare.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the Natchitoches Parish Chamber of Commerce, Natchitoches, La., praying for a redress of grievances; to the Committee on Commerce.

A resolution adopted by the City Council of Livonia, Mich., praying for the rejection of any and all proposals relating to the taxing of sovereign states and their municipalities; to the Committee on Finance.

A memorial adopted by the King County Council, State of Washington, praying for the defeat of any attempt to increase costs of local governments such as imposing a tax on the interest paid to individual investors in local securities; to the Committee on Finance.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CRANSTON, from the Committee on Labor and Public Welfare, with amendments:

H.R. 11959. An act to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons under such chapters (Rept. No. 91–487).

By Mr. MUSKIE, from the Committee on Government Operations, with amendments:

S. 1. A bill to provide for uniform and equitable treatment of persons displaced from their homes, businesses, or farms by Federal and federally assisted programs and to establish uniform and equitable land acquisition policies for Federal and federally assisted programs (Rept. No. 91–488); and

S. 11. A bill to reinforce the federal system by strengthening the personnel resources of State and local governments, to improve intergovernment cooperation in the administration of grant-in-aid programs, to provide grants for improvement of State and local personnel administration, to authorize Federal assistance in training State and local employees, to provide grants to State and local governments for training of their employees, to authorize interstate compacts for personnel and training activities, to facilitate the temporary assignment of personnel between the Federal Government, and State and local governments, and for other purposes (Rept. No. 91–489).

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations, without reservation:

Executive D, 91st Congress, first session, a Convention on the Conduct of Fishing Operations in the North Atlantic (Executive Rept. No. 91–8); and

Executive E, 91st Congress, first session, Vienna Convention on Consular Relations and Optional Protocol relating to the settlement of disputes (Executive Rept. No. 91–9).

BILLS AND A JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. BYRD of West Virginia:

S. 3046. A bill to amend title II of the Social Security Act to increase the annual amount individuals are permitted to earn without suffering deductions from the insurance benefits payable to them under such title; to the Committee on Finance.

By Mr. RIBICOFF:

S. 3047. A bill to provide for the licensing of personnel on certain vessels and to require the inspection of certain vessels; to the Committee on Commerce.

(The remarks of Mr. RIBICOFF when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. DODD:

S. 3048. A bill for the relief of Hamilton Joseph; and

S. 3049. A bill for the relief of Marianna Pegal; to the Committee on the Judiciary.

S. 3050. A bill to suspend for a 3-year period the import duty on certain raw silk and certain yarns of silk wholly of noncontinuous silk fibers; to the Committee on Finance.

(The remarks of Mr. DODD when he introduced S. 3050 appear later in the RECORD under the appropriate heading.)

By Mr. FANNIN (for himself and Mr. HART):

S. 3051. A bill to extend Letters Patent No. 2,322,210, and for other purposes; to the Committee on the Judiciary.

By Mr. HART:

S. 3052. A bill for the relief of Corazon H. Roche; to the Committee on the Judiciary.

By Mr. HARTKE:

S. 3053. A bill for the relief of Mrs. Constancia M. Lozano; to the Committee on the Judiciary.

By Mr. TYDINGS (by request):

S. 3054. A bill to extend the protection of the mechanic's lien law of the District of Columbia to subcontractors beyond the first tier, and for other purposes; to the Committee on the District of Columbia.

By Mr. MURPHY (for himself, Mr. BOGGS, Mr. CRANSTON, Mr. FONG, Mr. INOUYE, and Mr. MUSKIE):

S.J. Res. 162. A joint resolution in recognition of the Fifth International Conference on Water Pollution Research; to the Committee on Foreign Relations.

(The remarks of Mr. MURPHY when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 3047—INTRODUCTION OF A BILL RELATING TO LICENSING OF PERSONNEL ON CERTAIN VESSELS

Mr. RIBICOFF. Mr. President, today I introduce legislation designed to bring greater safety to inland water commerce.

Each year, towing vessels become more powerful and push larger numbers of barges carrying greater amounts of hazardous materials. In its 1968 report, "The Nation's Water Resources," the Water Resources Council forecasts a 350-percent increase in inland waterborne commerce in the next 50 years, a doubling of the horsepower of towing vessels, and a 25-percent increase in speed.

Each day, tons of oil and chemicals are barged up inland waters by unlicensed operators in uninspected vessels. Many run aground severely damaging inland beaches, marshes, and wildlife with their foul smelling, life killing contents. Others come loose, drift downstream to damage highway bridges and set afire moored vessels and port facilities.

The National Transportation Safety Board has in its "Study of Towing Vessel Safety and Accident Preventive Recommendations" set out a series of typical towing vessel accidents that clearly show the hazards of inland waters commerce. These documented accidents clearly evidence the need for Coast Guard inspection of the towing vessel and Coast Guard licensing of the towing vessel operator.

Following are some of the accidents set out in the Safety Board's study:

First. An uninspected tug pushing a barge collided with a major highway bridge knocking out one section of the bridge. No lives were lost, but the bridge was closed to traffic for some time, and damages estimated at $200,000. This collision occurred on a clear night with light winds, no current, and the bridge well lighted. The operator of the tug was unlicensed, and had only 4 months experience operating tugs of the type involved.

The report of the investigation stated that the proximate cause of the casualty was that the operator fell asleep while operating the tug. It further concluded that the operator on watch was probably quite fatigued, having worked for 7 days, on a 6-hour watch, 6-hour off-duty basis. There were three crewmembers on board the tug, two of whom alternated as operator, and a deckhand, none licensed by the Coast Guard.

Second. A towing vessel pushing a large tow of barges was bound downriver on a clear night in the Mississippi River above Baton Rouge, La. It was displaying proper navigation lights on the vessel and the barges in its tow. Another towing vessel, without tow, attempted to cross the river to the east bank. It was displaying masthead lights only. This latter vessel attempted to cross ahead of the downbound tow, and sounded no whistle signal. The downbound operator saw the other get underway and head towards his tow. He illuminated the tow with his searchlight and attempted unsuccessfully to raise the other vessel by voice radio. He sounded the danger signal, reversed engines in an attempt to clear the crossing vessel. The lead barge failed to clear the other vessel and capsized it. One of two in her crew drowned.

The unlicensed operator of the crossing vessel was at fault for reckless or negligent operation. In the absence of a crossing agreement and without sounding appropriate whistle signals, he attempted to cross the lead barge of the other vessel's tow when risk of collision was imminent and apparent to an experienced operator. He also was at fault in failing to keep clear of a privileged vessel or to sound the danger signal. Another violation was operating without lighting the red and green side lights. Radio communication could probably have avoided this collision.

Third. A towing vessel backed a double-up tow of barges into the river after they had been loaded with highly volatile "Southern" crude oil, and was in the process of securing them in tandem for pushing. During this process, the lead barge collided with an anchored tanker as the swift current set the barge down on the anchor chain and tanker's bow. Fire engulfed the tanker and two barges, injuring nine crewmembers of the tanker, and resulted in damages totaling $700,000.

The cause of this casualty was inadequate power on the towing vessel to control its tow under existing current conditions, resulting in her inability to back clear of the tanker. There was also negligence or reckless operation evident on the part of the unlicensed operator of the tug for failure to recognize the existing conditions and for attempting such a maneuver.

Fourth. A low-powered towing vessel attempted to tow a sulfuric acid barge alongside, on inland waters, despite small craft warnings in effect. The weather deteriorated, and high winds and seas forced the tug to abandon trying to push the barge alongside. The tug tried to rig a bridle for astern towing. Only one lead of the bridle was secured, and the tug lost control of the barge, which drifted down on a trestle of a bridge. Damages to the bridge and barge totaled over $300,000.

The tug was not adequately powered to control her tow in existing weather and sea conditions. The crew of the tug were inexperienced and seasick. Only two of the crew had Coast Guard documents, but no licenses. The operator failed to take prudent action when the weather forecast was heard, but continued on his voyage, losing control of his tow when the weather deteriorated.

The legislation I am introducing will require that towboats of more than 15 tons weight or 26 feet in length be inspected every 2 years and be operated by licensed pilots. This legislation will also require towing vessels of 750 horsepower and over to have on board an engineer licensed by the Coast Guard while under way, and limit the time a towboat operator can work to 12 hours a day.

I ask unanimous consent that the bill be printed in the RECORD at this point.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objecton, the bill will be printed in the RECORD.

The bill (S. 3047) to provide for the licensing of personnel on certain vessels and to require the inspection of certain vessels, introduced by Mr. RIBICOFF, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 3047

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4427 of the Revised Statutes (46 U.S.C. 405) is amended by inserting "(a)" immediately before the first word thereof, and by adding at the end thereof the following new subsection:

"(b) (1) As used in this subsection—

"(A) the term 'Secretary' means the Secretary of the Department in which the Coast Guard is operating;

"(B) the term 'towing' means pulling, pushing, or hauling alongside or any combination thereof;

"(C) the term 'towing vessel' means a vessel engaged in or intended to engage in the service of towing which is above fifteen gross tons or twenty-six feet or more in length;

"(D) the term 'uninspected' means not required by law to have a valid certificate of inspection issued by the Secretary.

"(2) A towing vessel in order to assure safe navigation shall while underway, be under the actual direction and control of a person licensed by the Secretary under regulations prescribed by him. A person so licensed may not work a vessel while underway or perform other duties in excess of a total of twelve hours in any consecutive twenty-four-hour period except in case of emergency.

"(3) A towing vessel of seven hundred and fifty horsepower and over shall, while underway, have on board as engineer, a person licensed by the Secretary under regulations prescribed by him.".

SEC. 2. All towing vessels regardless of manner of propulsion, and whether documented or not, shall be inspected under the provisions of this Act.

"(a) The Secretary shall, before a towing vessel is put into service, and at least once every two years thereafter, cause it to be inspected, and shall satisfy himself that it (1) is of a structure suitable for the service in which it is to be employed; (2) is equipped with the proper appliances for lifesaving and fire protection; (3) has suitable accommodations for the crew; and (4) is in a condition to warrant the belief that it may be used, operated, and navigated with safety to life and property in the proposed service.

"(b) The Secretary may, in order to secure effective provision against hazard to life and property created by vessels subject to this section, prescribe such regulations as may be necessary with respect to the following matters:

"(1) The design, construction, alteration, or repair of towing vessels.

"(2) Operation of towing vessels, including the waters in which they may be navigated.

"(3) Manning of towing vessels and the duties of the licensed officers and members of the crews of such vessels.

"(4) Licensing and certification of crews of towing vessels.

"(c) In prescribing regulations for towing vessels the Secretary shall give consideration

to the age, size, service, route, and other factors affecting the operation of the vessel. If the Secretary determines that the application to any towing vessel of the regulations prescribed for towing vessels is not necessary in the public interest, he may exempt that vessel from the application of the regulations, or any part thereof, upon such terms and conditions and for such periods as he may specify.

"(d) The Secretary may prescribe reasonable fees or charges for (1) any inspection made and (2) any certificate, license, or permit issued under this section or the regulations prescribed hereunder.

"(e) A certificate of inspection issued to a towing vessel may at any time be voluntarily surrendered.".

SEC. 3. The amendments made by this Act shall become effective on January 1, 1970, or on the first day of the sixth month which begins after the month in which regulations are first issued under the amendments of section 4427 of the Revised Statutes (46 U.S.C. 405) made by this Act whichever date is later.

S. 3050—INTRODUCTION OF A BILL SUSPENDING FOR A 3-YEAR PERIOD THE IMPORT DUTY ON CERTAIN RAW SILK AND CERTAIN YARNS OF SILK

Mr. DODD. Mr. President, I introduce for appropriate reference a bill which would remove a serious impediment from an old and respected American industry.

For many years, the American silk industry has been burdened with increased operation costs because it must wind the duty-free silk it imports. A slow and tedious task, winding has attracted few new workers, and the expensive process has backed the silk industry into a corner.

Therefore, I am introducing a bill to suspend for 3 years the import duty on raw silk which is prewound on spools and cones.

By freeing its labor force from winding tasks and reducing the period of time needed to produce silk fabric, the silk industry will hopefully be able to regain its former competitive position with foreign silk fabric imports.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3050) to suspend for a 3-year period the import duty on certain raw silk and certain yarns of silk wholly of noncontinuous silk fibers, introduced by Mr. DODD, was received, read twice by its title, and referred to the Committee on Finance.

SENATE JOINT RESOLUTION 162—INTRODUCTION OF A JOINT RESOLUTION IN RECOGNITION OF THE FIFTH INTERNATIONAL CONFERENCE ON WATER POLLUTION RESEARCH

Mr. MURPHY. Mr. President, I have frequently labeled pollution, both air and water, as one of the most serious problems confronting our country. We know, however, that pollution is not only a problem of this Nation but also a worldwide one.

The pollution of our environment seems to increase along with industrialization, urbanization, and population growth. We know that we cannot continue past practices of polluting our environment. The growing concern in the Congress and in the country over water pollution can be seen with the passage by the Senate of S. 7, the Water Quality Improvement Act, and by the House action of almost tripling the budget for sewage treatment construction.

Mr. President, with world demands on our water resources likely to increase as populations grow and industrialization continues, we simply must stop or greatly reduce industrial waste and domestic sewage if we are going to have supplies sufficient to meet these growing demands.

The United States has been giving increasing attention to the water pollution problem. I have been pleased to have supported the various measures enacted to accelerate our country's battle against this water pollution. The search for a solution to the water pollution problem continues here and also in the other countries of the world.

Earlier this year, Mr. President, the Fourth International Conference of the International Association on Water Pollution—IAWPR—was held in Czechoslovakia. One thousand one hundred research workers and engineers in pollution prevention studies attended the conference to exchange and explain recent advances in the important water pollution field. This conference was similar to the first IAWPR conference held in London in 1962, the second held in Tokyo in 1964, and the third conference held in Munich in 1966.

Today I introduce Mr. President, a joint resolution recognizing the Fifth International Conference on Water Pollution Research, which is scheduled to be held in one of the favorite cites of the world, San Francisco, Calif., from July 26 through August 1 of next year, and a reconvened conference which will be held in another great city, Honolulu, Hawaii, from August 2–5, 1970. The joint resolution is cosponsored by Senators BOGGS, CRANSTON, FONG, INOUYE, and MUSKIE.

The growing worldwide concern over the pollution problem as well as the magnetic lore of San Francisco promise that a minimum of 3,500 individuals from at least 50 countries will be in attendance at the San Francisco meeting. The proceedings of this international conference will be presented in five languages. In addition, there have been submitted twice as many papers as have been submitted in any previous international conference.

President Nixon in his September 19 address to the United Nations stated that the task of "protecting man's environment is a matter of international concern," and further pledged the support of the United States for "international initiatives toward restoring the balance of nature, and maintaining our world as a healthy and hospitable place for man."

Mr. President, I certainly want to commend this Fifth International Conference on Water Pollution Research. Surely the pollution problem transcends both national and international boundaries, as well as ideologies, and is an area where nations can and must work together for the good and safety of all mankind.

Mr. President, I ask unanimous consent that the language of the joint resolution be printed at this point in the RECORD.

The PRESIDENT pro tempore. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 162) in recognition of the Fifth International Conference on Water Pollution Research, introduced by Mr. MURPHY (for himself and other Senators), was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

S.J. RES. 162

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Congress declares that—

(1) the International Association on Water Pollution Research was formed throughout the world together in the fight against water pollution;

(2) the objectives of the association are to contribute to a better understanding of water pollution problems, to encourage the exchange of scientific knowledge, to better enable the nations of the world to combat water pollution problems, to narrow the gap between actual and optimum use of water resources, and thus to contribute to continuing social and economic progress;

(3) a lack of maximum communication and coordination between research programs has retarded efforts to effectively utilize all funds available for water pollution research performed in various countries;

(4) efforts by the International Association on Water Pollution Research have materially assisted in alleviating duplication in pollution research, have fostered the exchange of scientific research data, and have significantly benefited all nations in their programs to control water pollution;

(5) the international association has sponsored biannual conferences on water pollution research which have provided scientists, engineers, and administrators a forum for formulating an international activities program to permit concerted and cooperative water pollution research;

(6) President Richard Nixon, in his address of September 19, 1969, to the United Nations, stated that "the task of protecting man's environment is a matter of international concern";

(7) in that address the President pledged the strong support of the United States for "international initiatives" toward restoring the balance of nature, and maintaining our world as a healthy and hospitable place for man"; and

(8) the Fifth International Conference on Water Pollution will be held in San Francisco, California, July 26, 1970, through August 1, 1970, and will be reconvened in Honolulu, Hawaii, from August 2, 1970, through August 5, 1970, to deal with water pollution, one of the most important problems of the United States and the world.

(b) Therefore, all Federal departments and agencies, the States, and all interested persons and organizations, both public and private, are urged to cooperate with, and assist fully, the Fifth International Conference on Water Pollution, the United States National Committee, and the California and Hawaii Host Committees in making the 1970 conference the most outstanding, productive, and successful yet held.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

S. 232

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at

the next printing, the names of the Senior Senator from Alaska (Mr. STEVENS) and the junior Senator from Oklahoma (Mr. BELLMON) be added as cosponsors of S. 232, to promote the economic development of the Trust Territory of the Pacific Islands.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 1362

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Delaware (Mr. BOGGS), I ask unanimous consent that, at the next printing, the name of the Senator from Oklahoma (Mr. HARRIS) be added as a cosponsor of S. 1362, to provide Federal financial assistance to Opportunities Industrialization Centers.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 3035

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Indiana (Mr. HARTKE), I ask unanimous consent that, at the next printing, the name of the Senator from New Hampshire (Mr. MCINTYRE) be added as a cosponsor of S. 3035, to amend title II of the Social Security Act.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE JOINT RESOLUTION 144

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Junior Senator from Alaska (Mr. GRAVEL), the junior Senator from South Dakota (Mr. MCGOVERN), the junior Senator from North Dakota (Mr. BURDICK), the senior Senator from Nevada (Mr. BIBLE), the junior Senator from Montana (Mr. METCALF), the junior Senator from Utah (Mr. MOSS), the senior Senator from Oregon (Mr. HATFIELD), the senior Senator from Alaska (Mr. STEVENS), and the senior Senator from Arizona (Mr. FANNIN) be added as cosponsors of Senate Joint Resolution 144, to provide for the appropriation of funds to assist school districts adjoining or in the proximity of Indian reservations, to construct elementary and secondary schools and to provide proper housing and educational opportunities for Indian children attending these public schools.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE JOINT RESOLUTION 153

Mr. SCOTT. Mr. President, at the request of the Senator from Maryland (Mr. MATHIAS), I ask unanimous consent that, at the next printing, the name of the Senator from Ohio (Mr. SAXBE) be added as a cosponsor of Senate Joint Resolution 153, to establish a commission to report upon the condition and future of American policy respecting all aspects of international trade and tariffs.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 42—SUBMISSION OF A CONCURRENT RESOLUTION TO TERMINATE THE JOINT RESOLUTION COMMONLY KNOWN AS THE GULF OF TONKIN RESOLUTION

Mr. YOUNG of Ohio submitted a concurrent resolution (S. Con. Res. 42) to terminate the joint resolution commonly known as the Gulf of Tonkin resolution, which was referred to the Committee on Foreign Relations.

(The remarks of Mr. YOUNG of Ohio when he submitted the concurrent resolution appear later in the RECORD under the appropriate heading.)

SENATE RESOLUTION 276—SUBMISSION OF A RESOLUTION RELATIVE TO SCHUYLKILL RIVER STUDY

Mr. SCHWEIKER (for himself and Mr. SCOTT) submitted the following resolution (S. Res. 276); which was referred to the Committee on Public Works:

S. RES. 276

Resolved, by the Committee on Public Works of the United States Senate that the Board of Engineers for Rivers and Harbors, created under section 3 of the Rivers and Harbors Act, approved June 13, 1902, is requested to review the reports on the Schuylkill River, Pennsylvania, contained in House Document Numbered 529, Seventy-ninth Congress, and other pertinent reports, with a view to determining whether any modifications of the recommendations contained therein are advisable, with particular reference to the needs for flood control, navigation, water supply, recreation, environmental and other allied water purposes in the Schuylkill River Basin.

ADDITIONAL COSPONSORS OF RESOLUTIONS

SENATE RESOLUTION 30

Mr. SCOTT. Mr. President, at the request of the Senator from Vermont (Mr. PROUTY), I ask unanimous consent that, at the next printing, the name of the Senator from Minnesota (Mr. MCCARTHY) be added as a cosponsor of Senate Resolution 30, to amend the Standing Rules of the Senate relative to the Select Committee on Small Business.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE RESOLUTION 271

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Kansas (Mr. DOLE), I ask unanimous consent that, at the next printing, the name of the Senator from North Carolina (Mr. JORDAN) be added as a cosponsor of Senate Resolution 271, for peace in Vietnam.

The PRESIDENT pro tempore. Without objection, it is so ordered.

TAX REFORM ACT OF 1969—AMENDMENT

AMENDMENT NO. 252

Mr. MILLER submitted an amendment, intended to be proposed by him, to the bill (H.R. 13270) to reform the income tax laws, which was referred to the Committee on Finance and ordered to be printed.

(The remarks of Mr. MILLER when he submitted the amendment appear later in the RECORD under the appropriate heading.)

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, if no other Senator is seeking the floor at this time I ask unanimous consent that I may be permitted to proceed for 15 minutes in the morning hour.

The PRESIDENT pro tempore. Without objection, it is so ordered. The Senator is permitted to proceed for 15 minutes.

NIXON PLANNING TO REORGANIZE THE FEDERAL BANKING AGENCIES

Mr. PROXMIRE. Mr. President, there have been recent press reports that the administration is planning to reorganize the Federal banking agencies. The central feature of the administration's proposal seems to be an effort to strip the Federal Reserve Board of its bank regulatory duties and divide them between the FDIC and the Comptroller of the Currency.

Additional details on the reorganization are cloaked in secrecy. A call to the Federal Reserve Board indicated that none of the governors of the Board have even seen the plan other than newspaper stories about it. Other officials were also in the dark. According to press reports, the most knowledgeable sources about the plan seem to be Under Secretary Charles E. Walker, former executive director of the American Bankers Association and a committee of the American Bankers Association which has been reviewing the plan. It seems a little strange that the American Bankers Association, a private trade association, seems to be better informed about the plan than the Federal Reserve itself.

Press reports do indicate that President Nixon might implement the reorganization by Executive order. Under this procedure, the reorganization plan goes into effect automatically in 60 days unless specifically disapproved by either House of Congress.

Mr. President, under the present regulatory framework, bank supervision is divided between three agencies. There are about 4,700 national banks with 60 percent of banking assets supervised by the Comptroller of the Currency. There are about 1,300 State member banks with 23 percent of banking assets which are supervised by the Federal Reserve. And there are about 7,500 State nonmember banks with 17 percent of banking assets supervised by the FDIC. The average sized bank supervised by the Comptroller is $63 million, for the Federal Reserve it is $93 million, and for the FDIC it is $11 million.

The issue of reorganizing the banking agencies has been around for many years. A number of proposals have been advanced, including the establishment of a single Banking Commission to assume all regulatory duties. Many of these proposals have been debated in congressional hearings and in other discussions. From these discussions, one thing seems clear: the reorganization of the banking agencies involves more than administrative efficiency. The structure of our bank regulatory agencies can have a profound impact upon the banking industry and the economy. The present threefold division of responsibility was deliberately created by Congress to maintain our dual banking system and to avoid excessive concentration of power in the hands of a single agency. A thorough review of

this structure is long overdue, but I firmly believe that Congress should actively participate in any change.

I am, therefore, concerned over reports that the President might seek to implement a far reaching reorganization of the banking agencies through the Reorganization Act procedures. If this were done, Congress would be treated as voters in a Russian election. We could only disapprove the plan worked out by the administration. We could not participate in shaping the plan or in amending its details. We would not have adequate time to study the ramifications of the plan. We would not have time to hear the views of interested organizations and outside experts on banking. The House and Senate Banking Committees would not have an opportunity to consider the plan since reorganization plans are generally considered by the Government Operations Committees.

The purpose of the Reorganization Act is to promote economy and efficiency in Government. By making reorganization plans automatic unless specifically disapproved by Congress, the President is given a powerful tool for streamlining procedures and eliminating bureaucratic deadweight. I thoroughly support these objectives and the use of the Reorganization Act to achieve them.

However, I do not believe the Congress intended the Reorganization Act to be used when major policy matters are involved. In that connection, Congress amended the act to prohibit its procedures to be used to create or abolish any executive deportment. This prohibition properly reflects the view that a major organizational change should be through the positive affirmation of Congress rather than the negative veto procedures of the Reorganization Act. A major overhaul of the banking agencies should also require positive legislation since such a reorganization could have a significant impact on our economy. Any far-reaching reorganization of the Federal banking agencies should be thoroughly discussed in hearings before the House and Senate Banking Committees.

A dangerous precedent would be created should the administration transfer responsibilities from the Federal Reserve through the Reorganization Act. The primary job of the Federal Reserve is to execute monetary policy and in carrying out this assignment, Congress has intended that the Federal Reserve be independent of the President and the Treasury. If the President can relieve the Federal Reserve of its bank supervisory duties through the Reorganization Act, there is nothing to prevent him from using the same approach to transfer the Fed's monetary policy responsibilities to the Council of Economic Advisers. The power to reorganize is the power to control. How long could the Fed maintain its traditional independence if the President threatened to reorganize it out of its job?

I certainly think a good case can be made for closer coordination of economic policy between the Fed and the administration. Perhaps the President ought to have more control over the Fed. But only Congress can decide this question. We should not legislate the independence of the Fed and then turn around and give the President the power to undermine that independence through the Reorganization Act. Nor should we set a precedent for such action by approving a transfer of bank supervisory responsibilities under the Reorganization Act.

According to press reports, the underlying reasons for getting the Fed out of bank regulation are twofold: First there is a feeling by some Fed officials and others that its bank supervisory responsibilities detract from its main job of making monetary policy; second, there is a feeling by some bankers that the Fed is "too strict" in its regulatory approach and that regulations would be softer under another agency. The decision by the House Banking Committee to put one-bank holding companies under the Fed's supervision may have increased the sentiment to get the Fed out of bank regulation.

Without attempting to prejudge the answers, I would like to raise a number of questions concerning the proposed reorganization of the banking agencies. These questions should be thoroughly debated and aired in hearings before the Banking Committees of Congress.

First, what impact would the reorganization have upon the execution of monetary policy? If the Fed were stripped of its regulatory powers, would it be in a weaker position to induce commercial banks to restrain their lending activities during periods of tight money? We have seen commercial banks develop a variety of devices to avoid tight money including borrowing eurodollars and issuing commercial paper through holding company affiliates. Efforts to avoid monetary restriction could intensify if banks were no longer supervised by the Fed.

Second, who should exercise control over the rates of interest which banks can pay on time deposits? Such limitations were originally imposed as a regulatory tool to promote safety, but in recent years they have grown into a powerful supplement to general monetary policy.

Third, what will be the impact on bank mergers? Reorganizing the banking agencies can have a substantial effect on bank mergers. There are major differences in the importance which each agency attaches to the competitive and antitrust aspects of bank mergers. For example, the Bank Merger Act requires each banking agency and the Justice Department to prepare an advisory opinion on all merger applications. The advisory opinion must indicate if the proposed merger would have a substantially adverse effect upon competition. Whenever a merger case is before one of the three banking agencies the other two agencies and the Justice Department must issue an advisory opinion.

By comparing each agency's findings with those of Justice, we can see how each agency views threats to competition. From 1960 to 1969, the FDIC said there was some adverse competitive effect on 60 percent of the mergers on which they issued an advisory opinion. The comparable figure for Justice on the identical cases was 54 percent. Likewise, the Federal Reserve found some adverse competitive effect on 61 percent of its advisory opinions compared to 50 percent for Justice on the same cases. These two agencies were actually tougher than Justice.

However, when we look at the Comptroller of the Currency, the situation is dramatically reversed. The Comptroller could only see some adverse competitive effect on 22 percent of its advisory opinions compared to 45 percent for Justice on the same cases.

If we look at these same merger statistics in terms of the dollar value of the assets involved, the comparisons are even more striking. From 1960 to 1969, the FDIC issued advisory opinions on bank mergers involving assets of $316 billion. They found some adverse effect upon competition in mergers involving $168 billion in assets or 53 percent of the total. The Justice Department, looking at the same cases, found an adverse competitive effect on 67 percent of the total assets involved.

Likewise, the Fed found anticompetition effects on 67 percent of the dollar volume of merger cases it considered compared to 59 percent by Justice on the same cases. The Comptroller could only see an adverse competitive effect on 35 percent of the dollar volume of merger cases it considered compared to 75 percent by Justice on the same cases. Once again, the Comptroller appears to have myopia when competition is an issue.

It is interesting to compare each of the three agencies to Justice in terms of their propensity to see anticompetitive effects. The Fed is 8 percentage points ahead of Justice, while the FDIC is 14 percentage points behind and the Comptroller is a whopping 40 percentage points behind. These differences have occured despite the fact that each of the three agencies is interpreting the identical law.

The Comptroller seems to have a constitutional inability to perceive threats to competition. It has clearly demonstrated that it is substantially more lax in its regulatory philosophy than the other two banking agencies.

Since the proposed reorganization apparently assigns greater responsibility to the Comptroller, the effect on bank competition could be disastrous. We could have a wave of bank mergers under the benign sponsorship of the Comptroller resulting in the concentration of banking assets in the hands of a few large banks. This would be especially true if the Comptroller rather than the Fed, passed upon mergers and acquisitions involving bank holding companies.

A fourth question about the reorganization plan is what impact would it have upon the dual banking system? The proposed reorganization could undermine the dual banking system. If the State banks supervised by the Federal Reserve were shifted to the FDIC, many of them might convert to national charters since the FDIC has traditionally been oriented to the problems of smaller banks. Such a move could spell the end of State banking. As I pointed out earlier,

the average size of a federally supervised bank is $93 million compared to $11 million for an FDIC supervised bank. In addition, many State banks might elect to convert to national charters if the Comptroller took over the responsibilities for approving mergers and acquisitions by bank holding companies.

On the other hand, if the larger State banks elected to stay under FDIC supervision, they could dominate the agency and small banks would lose their independent voice at the Washington level.

In summary, the proposed reorganization of the banking agencies could undermine our dual banking system and lead to a monopoly by a handful of the Nation's largest banks. We need to move with extreme care and caution. I have raised a number of questions about the proposal. These are difficult and complex questions which need to be carefully explored by the two banking committees, which have the expertise on banking matters. I would hope the administration would not try to ram such a proposal through Congress under the Reorganization Act in which Congress has only 60 days to say yes or no. We need to consider the reorganization of our banking agencies, and I am glad that the administration is developing a proposal. But I hope that the administration would recommend positive legislation to accomplish the reorganization instead of relying upon the Reorganization Act procedures which were never intended for such a far-reaching action.

Mr. President, I ask unanimous consent to have printed in the RECORD following my remarks a table showing the bank merger statistics I referred to in my speech, an article from the New York Times about the reorganization, and a paper presented by Gov. Andrew Brimmu of the Federal Reserve Board on bank mergers.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AGENCY ADVISORY OPINIONS UNDER THE BANK MERGER ACT, 1960 TO MAR. 31, 1969

	Number of cases	Percent of Total considered Percent of	Dollar volume of assets involved (in billions of dollars)	Percent of total considered	Difference in percentage points between banking agency and Justice
Cases considered jointly by Justice and FDIC	930	100	316.4	100	
Some adverse effect on competition found by:					
Justice	506	54	210.8	67	
FDIC	563	60	167.8	53	−14
Cases considered jointly by Justice and Federal Reserve	1,047	100	225.5	100	
Some adverse effect on competition found by:					
Justice	524	50	132.3	59	8
Federal Reserve	641	61	151.8	67	
Cases considered jointly by Justice and Comptroller of the Currency	525	100	147.7	100	
Some adverse effect on competition found by:

Comptroller	114	22	51.9	35	−40

BANKING REFORM PLAN STIRS INDUSTRY CONCERN

(By H. Erich Heinemann)

On Tuesday and Wednesday of this week, a select group of bankers are due to gather in Washington to consider the possibility of a fundamental overhaul in the Governmental machinery that regulates their industry.

The Nixon Administration, largely in the person of Under Secretary of the Treasury Charls E. Walker, has made little effort to conceal its desire to reshuffle the powers of the three Federal banking agencies, so that the Federal Reserve Board would be left free to concentrate on the management of the nation's money supply, while the Federal Deposit Insurance Corporation and the office of the Controller of the Currency would have responsibility for such things as examinations, merger and branching applications and holding company expansion.

Rumors that such a reorganization was brewing have been circulating in Washington for many weeks, but the banking industry did not become fully aware that it was imminent until The New York Times reported the broad outline of the Administration's plan on Sept. 15.

NOVEMBER DATE REPORTED

Now, according to the authoritative newsletter, Washington Financial Reports, there is a "very high probability" that the reorganization will be announced by Nov. 15.

Nat S. Rogers, president of the First City National Bank of Houston, and the newly elected president of the American Bankers Association, appointed a special committee on the Federal bank regulatory structure as his first significant action in office. It is this group that will meet in Washington this week, to try to get a line on the details of what the Administration has in mind.

The chairman of the group is Rex J. Morthland, president of the Peoples Bank and Trust Company, Selma, Ala., and its members include John J. Cummings, president of the Industrial National Bank, Providence, R.I., Paul Hanna, senior vice president of the Manufacturers Hanover Trust Company, New York and Leslie C. Peacock, executive vice president, the Crocker-Citizens National Bank, San Francisco.

According to one insider, there is likely to be a sense of urgency in the proceedings, because of clear indications that the Administration plans to push ahead quickly with its idea.

WALKER SEES AGREEMENT

At a news conference at the American Bankers Association convention in Honolulu two weeks ago, Mr. Walker left no doubt where he stood on the issue. Mr. Walker, who was formerly executive vice president of the American Bankers Association, said that there was "growing agreement" that the Federal Reserve should get out of bank regulation, although the details of the reorganization were still to be worked out.

In any event, Washington sources emphasize that the reform is likely to be carried out in an Executive Order by President Nixon, which the Congress would then have the authority to veto within 60 days. There is a suspicion among some bankers that the Administration may be attempting to press its plan quickly before opposition to it has a chance to organize.

According to Washington Financial Reports, plans call for the details to be settled in consultation between Federal Reserve Chairman William McChesney Martin Jr., Kenneth A. ("Kay") Randall, chairman of the F.D.I.C., and William B. Camp, the Controller of the Currency. Once an agreement had been reached, a formal recommendation would be made to the White House, which would then accept it in whole or in part, or reject it.

An added complication may well come, bankers say, from the fact that all three men could be leaving their present jobs soon. Mr. Martin and Mr. Randall are near the end of their terms and will retire, and there are persistent reports that the Republican Administration would like to replace Mr. Camp, a Democrat.

Whatever the outcome, it is likely to generate a lively political controversy. Many bankers, although certainly not all of them, have been chafing for years under what they regard as unnecessarily tight and rigid regulation by the Federal Reserve authorities. These men would like to see the Federal Reserve get out of the bank regulation business.

At the same time, many Congressmen—some of whom are normally hostile to the Federal Reserve authorities—like the strict job of regulation that the seven-man board is doing, and indeed have been insisting that regulation of one-bank holding companies, an issue which is now pending before the House of Representatives, be given to the Reserve, just for this reason.

REACTION AWAITED

How these men—who include Representative Wright Patman, the Texas Democrat who is chairman of the House Banking and Currency Committee—will react to a reorganization plan that takes the Federal Reserve out of bank regulation, remains to be seen.

Then, too, while the principle of the reorganization sounds simple enough, it turns out in practice to be a highly complex affair. Assuming the Federal Reserve is to be stripped of its regulatory powers, just how are these powers defined, and to which other agency are they to be assigned?

For example, is the Federal Reserve's authority to set interest rates on time and savings deposits a regulatory or monetary function? It was originally conceived as a regulatory power, but lately the Reserve has used it to restrict the ability of the banks to bid for lendable funds, and thus force them to hold back on loans that are considered to be inflationary.

Sources close to the A.B.A. committee say there are no easy answers to this and many other questions.

Furthermore, there are other, more fundamental issues. A number of influential officials—including New York Superintendent of Banks Frank Wille, Irvine H. Sprague, a director of the F.D.I.C., Representative Henry S. Reuss and Senator William Proxmire (the latter two both Wisconsin Democrats)—have called for a basic study of the nation's financial structure by a Presidential Commission, to sort out the conflicting and overlapping areas of regulation, as well as the competition between different types of financial institutions for broader areas of service.

Some bankers are concerned that the Administration's contemplated reorganization, should it be carried out, could foreclose the possibility of an analysis that would try to answer the basic question of what kind of financial structure the nation needs to meet the money needs of the next decade.

MARKET STRUCTURE, PUBLIC CONVENIENCE, AND THE REGULATION OF BANK MERGERS

(By Andrew F. Brimmer)

The debate over the changes required in our banking structure to meet the expanding credit needs of the American public is always a lively one, and the role of bank mergers is usually close to the center of the discus-

sion. Today, despite the focus on the question as to whether banks should be allowed to conduct their businesses through operational subsidiaries, loan production offices or under the direction of a holding company, the policies followed by Federal bank supervisory agencies in the regulation of mergers and acquisitions continue to be of vital interest to the banking community. Thus, an annual convention of the American Bankers Association is an ideal setting for an examination and assessment of the way in which the bank supervisory agencies have carried out their statutory responsibilities in recent years.

The Bank Merger Act, originally enacted in 1960, and the Bank Holding Company Act, enacted in May 1966, were both amended in 1966. Principal among the amendments to each of the statutes was a change in the statement of circumstantial factors the Board is required to consider under the Bank Holding Company Act, and which the appropriate Federal supervisory authority (Board, Comptroller of the Currency, or Federal Deposit Insurance Corporation—depending on the charter status of the continuing institution), must consider under the Bank Merger Act. The amended "statutory factor" provisions were made virtually identical in the Bank Merger and Bank Holding Company Acts and, with respect to the competitive aspects of a merger or holding company proposal, the more precise guidelines found in the Sherman and Clayton Acts were made applicable.

Thus, with respect to either a proposed bank merger where the resulting bank is to be a State member bank, or a bank holding company acquisition, the Board may not approve any proposal that would result in a monopoly or that would be in furtherance of any combination or conspiracy to monopolize or to attempt to monopolize the business of banking in any part of the United States. Nor may the Board approve any proposed merger or holding company acquisition the effect of which, in any section of the country, may be substantially to lessen competition *unless* the Board finds that the anticompetitive effects of the proposed transaction are *clearly outweighed* in the public interest by the probable effect of the transaction in meeting the convenience and needs of the community to be served.

Pursuant to the amended provisions of both the Merger Act and the Bank Holding Company Act, a court before which an action is commenced under the antitrust laws, following agency approval of a Merger Act or Bank Holding Company Act proposal, is required to review *de novo* the issues presented, and the standards to be applied by the court are those required to be considered by the agencies under paragraph 5 of the Merger Act, and by the Board under section 3 of the Bank Holding Company Act.

It is in this legal framework that the assessment of bank mergers and bank holding company proposals must be made. In approaching this task, I have attempted to answer the following questions:

To what extent, if any, can one observe significant differences in the pattern of merger decisions by the Federal Reserve Board, the Comptroller of the Currency and the Federal Deposit Insurance Corporation?

In deciding proposed bank mergers or bank holding company acquisitions, what weight, if any, should be given to possibilities of future, or potential, competition.

Should the rate of economic growth in an area influence the policies of the regulatory agencies?

In answering these questions, I have reached the following conclusions:

The Comptroller of the Currency and the FDIC apparently approve a much higher proportion of merger applications than does the Federal Reserve Board. These divergencies in denial rates seem to reflect differences in policies among the agencies rather than differences in the seriousness of anticompetitive effects involved in the kinds of cases handled.

Potential competition should be assigned considerable weight in merger cases. However, the Federal Reserve Board seems to follow this practice to a far greater extent than does either of the other two agencies.

A more permissive approach toward mergers in growth areas is not warranted as a general proposition. However, there may be some cases in which the effect of mergers on competition in such areas is offset by the advantage to the community in convenience and needs.

Before proceeding further, let me stress that the present assessment of bank mergers is entirely my own. To anyone familiar with the record of Federal Reserve Board merger and holding company decisions, it should be obvious that in this area—as in others—each Board member speaks for himself.

THE PATTERN OF DECISIONS IN BANK MERGERS AND ACQUISITION, 1966–1968

From the beginning of 1966, through July of 1968, there were over 460 merger and holding company applications received by the three Federal banking agencies. (See Table I, attached.) The vast majority of these applications (391) have proposed mergers, while only 71 have been for holding company acquisitions and formations.[1] Applications to the Comptroller of the Currency account for a little less than half of those received, those to the FDIC about 30 per cent and those to the Board close to 25 per cent.[2]

As one would expect, in view of wide differences in State laws governing multiple-office banking, merger and holding company activity is not evenly distributed throughout the United States. (Table II). Over the period, more than 80 per cent of the applications received came from seven Federal Reserve Districts: New York, Philadelphia, Cleveland, Richmond, Chicago, and Minneapolis. The Richmond district alone accounted for close to 20 per cent of the applications. By and large, each of these Districts includes one or more states in which multiple-office banking is prevalent. On the other hand, there has been less activity in the St. Louis, Kansas City and Dallas Districts, principally because of State restrictions on multiple-office banking.

Over this period, there were 427 decisions by the three banking agencies. There were 409 approvals and 18 denials. (Table III.) While the Board accounted for about one-quarter of the decisions, it also accounted for two-thirds of the denials. The FDIC and the Comptroller each had three denials; the Board had 12. The denial rate at the Board has been close to 11 per cent (with about the same rate for mergers, holding company formations and acquisitions). The denial rate at the FDIC has been less than 3 per cent and at the Comptroller of the Currency, less than 2 per cent. These data strongly suggest that there are significant differences among the agencies with respect to the way each handles its cases, and these differences in approach may have a strong bearing on whether the cases are likely to be approved or denied.[3]

Either the policies of the Board differ from those of the other banking agencies, or the kinds of cases handled by the Board involve more serious anticompetitive effects. While the latter possibility may account in part for the difference between the denial rate at the Board and the FDIC, it hardly seems likely to account for the difference between the Board and the Comptroller.

If, in fact, the denial rates at the Board and at other agencies reflect a difference in policy, this might be reflected in the way the Board's advisory opinions on competitive effects or merger cases are received. Over the period covered, the Board issued 121 advisory opinions to the FDIC and 204 to the Comptroller of the Currency—325 in all. (Table IV.) In 94, or close to 30 per cent of these reports, the Board indicated that the competitive effects of the proposed merger would be serious. (As might be expected, given the small size of the typical insured nonmember bank, the proportion submitted to the FDIC deemed serious was lower—about 22 per cent—than the proportion submitted to the Comptroller—about 33 per cent.)

An indication to another agency that the anticompetitive effect of a merger is serious does not necessarily mean that the Board itself would have denied the application. Serious anticompetitive effects could be offset, or "clearly outweighed" by the convenience and needs of the community. This would, however, have had to be the situation in a little less than two-thirds of the 94 cases in which a serious effect was indicated in order to bring the denial rate down to the Board's own 11 per cent.

In fact, however, the other two banking agencies issued denials in only three of the 94 cases in which the Board found a serious anticompetitive effect. The three other denials issued by the FDIC and the Comptroller were in cases in which the Board did not find a serious anticompetitive effect. There does not appear to be a significant relationship between the finding of a serious anticompetitive effect by the Board and the decisions by the other banking agencies.[4]

In my opinion, the pattern of merger decisions examined here is strong documentation of differences in the approach taken by the three supervisory agencies in carrying out their responsibilities under the bank merger statute. Since each agency must determine for itself how well it is meeting the requirements of the Bank Merger Act, I clearly cannot—and would not want to—judge the performance of the other agencies. With respect to the Federal Reserve Board, I obviously believe that we are performing reasonably well.

THE ROLE OF POTENTIAL COMPETITION

While one can describe statistically the differences in the pattern of merger decisions by the Federal bank supervisory agencies, it is far more difficult to explain those differences. Whatever the basis for the differences among the supervisory agencies, it appears to be reflected in their attitudes toward potential competition—that is, the extent to which weight is given to possibilities of future competition in a proposed bank merger or holding company acquisition.

Although it is not clear just how much importance the Comptroller and the FDIC assign to potential competition in deciding cases before them, one does get the impression that the weight they accord this factor is quite small. In contrast, the Federal Reserve Board places considerable emphasis on potential competition in the determination of both bank merger and bank holding company applications.

I believe it to be clearly established that the effect of the 1966 amendments to the Bank Merger and Bank Holding Company Acts was to impose on the responsible supervisory agencies a scheme for appraising and determining competitive consequences that, in major respects, is utilized generally in the Government's enforcement of section 7 of the Clayton Act as amended in 1950. Most relevant to this discussion is the question: Does a determination of whether the effect of a proposed merger or holding company acquisition "may be substantially to lessen competition" encompass situations involving "potential competition"?

The concept of "potential competition", treated herein, does not automatically en-

Footnotes at end of article.

compass—nor absolutely exclude—the related concepts of "potential injury to competitors" and "ease of market entry." Both of these concepts are properly the subject of inquiry in competitive analysis, but are not necessarily related to a determination of the likelihood that parties to a merger or holding company proposal will become active competitors.

Effective, workable competition in a given market exists when buyers of products or services are offered purchasing alternatives sufficiently real to provide these buyers with the opportunity to change from one seller to another, with the possibility of such change influencing sellers to seek improvements in the quality and price of the products and services which they offer. However, particularly in a market in which actual competition is in some manner deficient, sellers may be influenced as much by the realization that a low level of quality or a high price level may attract more competent or efficient entrants from the periphery of the market as they are by the threat posed by existing competitors. Effective competition in such markets, therefore, requires the preservation of the threat of potential competition.[5] Admittedly, to deal with "the preservation of the threat of potential competition" is, on its face, conjectural. But Congressional concern over *probabilities*, not certainties, was the precise reason for the Celler-Kefauver Amendment (1950) to section 7 of the Clayton Act.[6]

It seems fair to say that "potential competition" as a determinative factor in merger and acquisition cases, bank and nonbank alike, while recognized for many years past, has become a crucial and, in some cases, a decisive factor only within the last five years or so. In 1964. the United States Supreme Court decided three cases under section 7 of the Clayton Act in which substantial weight was accorded potential competition.[7] Of these decisions, *Penn-Olin* provides the most direct statement of law and of criteria for applying the law—both of which the Board finds applicable, and has applied, to bank merger and bank holding company proposals. *Penn-Olin* involved a joint venture agreement to produce and sell sodium chlorate in the southeastern United States between Pennsalt Chemicals Corporation, a producer and nationwide distributor of chemicals and chemical products, and Olin Mathieson Chemical Corporation, a producer of chemicals and chemical products with division plants in 15 States. However, at the time of the joint agreement the two corporations did not compete. The relevant market was then dominated by two other corporations, together controlling over 90 per cent of the sodium chlorate market. Pennsalt, pursuant to a sales agreement with Olin, was a minor third competitor in the relevant market. The joint venture agreement was a successor to the above-mentioned sales agreement.

The Supreme Court rejected the finding of the District Court that potential competition between the two joint venturers could be found to have been foreclosed *only* if, as a matter of reasonable probability, it could be shown that both Pennsalt and Olin would separately have entered the southeast market by means of plant establishments. Sufficient for a finding of substantial lessening of competition through foreclosure of potential competition, the Supreme Court said, was a finding of a "reasonable probability that either one of the corporations would have entered the market by building a plant, while the other would have remained a significant potential competitor".

Quoting in part from the aforementioned TNEC Monograph No. 21, the Court concluded:

"Potential competition, insofar as the threat survives . . . may compensate in part for the imperfections characteristic of actual competition in the great majority of competitive markets. . . . The existence of an aggressive, well equipped and well financed corporation engaged in the same or related lines of commerce waiting anxiously to enter an ogligopolistic market would be a substantial incentive to competition which cannot be underestimated." 378 U.S. 174.

Nor is the absence of a proven intent or attempt to enter a market a bar to a finding that a given concern is a potential competitor. It is sufficient to establish that such concern is the most likely entrant.[8]

The doctrine of potential competition, while not relied upon by the courts as a decisive consideration in a court contest involving alleged anticompetitive consequences of a proposed bank merger or holding company acquisition, has been considered and rejected, not as being *per se* inapplicable, but as being inapplicable in view of the facts of record.[9] Preclusion of entry into a defined banking market by a substantial potential competitor through consummation of a merger involving the potential entrant, and the question of whether such result violates section 7 of the Clayton Act, and should have been denied under the Bank Merger Act, are issues recently (9/10/68) placed before a Federal District Court by the U.S. Department of Justice, following the Board's approval of merger proposals involving Girard Trust Bank and Doylestown National Bank (Doylestown, Pa.) and The Fidelity Bank & Doylestown Trust Co. (Doylestown, Pa.). The Board, in its 6–1 decision in those cases which were considered together, took into account the possible impact of potential competition. While five members of the majority ruled that the net effect of the proposed mergers on competition would not be adverse, I felt that the over-all competitive effect would be no more than slightly adverse. Nevertheless, I, too, felt the applications should be approved.

The complaints filed by the Department of Justice in each case assert numerous violations of section 7 of the Clayton Act, the majority of which relate to asserted elimination of *potential competition* in commercial banking between and among the banks involved in the two mergers, and a general allegation of violation premised on the contributory effect of the two mergers on the continuing trend toward reduction in potential bank competitors in the Philadelphia area. We can safely assume, I believe, that the Department of Justice currently takes the position that potential competition is a major factor for consideration in determining the legality of a proposed bank merger; and that proven miscalculation or disregard of a merger's effect on potential competition can require remand to an agency or reversal of agency action.

No less import is attributed by the Board to the factor of potential competition in its consideration of Bank Holding Company Act applications. In the Board's denial action (April 1967, Fed. Res. Bull. 763) on the application of Allied Bankshares Corp., Norfolk, Virginia, to form a bank holding company through ownership of the Virginia National Bank, Norfolk, and The Central National Bank of Richmond, existing competition between the banks was found to be insignificant, and the effect of its elimination of minimal consequence. However, the likelihood that substantial potential competition between the banks would be precluded by their affiliation was stated to weigh heavily in the Board's decision. In May 1967, one month following the Allied denial, the Board, by unanimous vote, denied a proposal by *BT New York Corporation* to acquire *Liberty National Bank and Trust Company, Buffalo* (50 Fed. Res. Bull. 769). As in the *Allied* case, the Board concluded that existing competition between and among the banks involved in the proposal was sufficiently negligible that it posed no bar to approval. However, the proposal's probable effect on *potential* competition was found to present a severely adverse consideration. Rejecting Applicant's assertion that consummation of the proposal would promote deconcentration in the heavily concentrated Buffalo area—through Liberty National's anticipated greater ability to compete with its two larger rivals—the Board concluded that Liberty Bank was presently capable of offering to customers in its market area, both large and small, an alternative source of essential banking services.

Noting that legal and economic barriers to new entry into the Buffalo market area were already high, the Board expressed its concern that there be preserved whatever incentive might exist for entry by potential competitors having the resources and capacity to surmount existing barriers. Based on the financial and management resources of BT New York Corporation, the Board found that the Applicant was a potential competitor in the Buffalo market, whose greater participation in that market was not dependent on consummation of the proposed acquisition, and that the entry of such a sizable organization by that means would simply raise the entry barriers for others without increasing the banking alternatives already available to the public. Further, it was concluded that Liberty Bank, through a less anticompetitive affiliation, could offer meaningful competition to Applicant and other banking organizations in the upstate banking markets.

Lest the impression be given that there is no limit to the Board's application of the potential competition concept, I can and do speak with knowledge of the Board's efforts to delineate those cases where, because of the facts presented, potential competition has no reasonable role in the Board's determination. Assessing the competitive potential of a given institution is oftentimes difficult. Such assessment requires a definition of the relevant product and geographic markets, and a finding of the ability of a party to a proposal to compete in the market in which the other party or parties are engaged. A determination as to the ability of a bank to compete in given product and geographic markets involves analysis of the cost factor related to such entry. An accurate measure of probable profit, or lack thereof, can often mandate a conclusion as to whether a given bank can reasonably be designated a potential competitor. Similarly, the size of the bank, history of innovation, management ability, and related operational motives all must be taken into consideration in a determination of the presence or not of a potential competitor.

Whatever may be the desirability of taking account of potential competition, the United States Supreme Court has now ruled that it must be done.[10] As reflected in a Statement in which I joined, dissenting from the 4–3 action of the Board approving the merger of two banks in North Carolina (The State Bank, Laurinburg-Wachovia Bank and Trust Company, 7/11/68), I believe that Federal bank supervisory authorities are required by law in acting upon merger and bank holding company applications to guard against the continuing trend toward concentration of banking resources, a trend that the Bank Merger Act, the Bank Holding Company Act, and the antitrust laws were designed to prevent. The job cannot be done by ignoring the potential competitor, and will be done only if barriers to market entry are removed or substantially reduced.

MERGER POLICY AND ECONOMIC GROWTH

Should the rate of economic growth in an area influence the policies of the regulatory agencies toward proposed acquisitions? It

Footnotes at end of article.

apparently has been argued that competition tends to be more intense in a rapidly growing area than in a non-growing area; therefore, the regulatory agencies can afford to pursue a more permissive approach toward acquisitions.

There is nothing in current law or in recent court decisions that would suggest that rapid economic growth is taken by the Supreme Court as a relevant competitive consideration offsetting, let us say, the effect of a merger on concentration in an area. Nor has the Court suggested that the growth of an area, past or prospective, constitutes a justification for a merger that would otherwise be illegal—as might be the case if it were found that mergers in growing areas contributed substantially to the convenience and needs of the community. However, the bank regulatory agencies deal with large numbers of proposals that merit a full scale economic review, many of which are, in all likelihood, not violations of the antitrust laws as currently interpreted. In such cases, there is no necessary reason to adopt exactly the same presumptions as have been applied in antitrust cases by the courts. Moreover, the substantive question would, in any event, remain and it does warrant consideration.

The view that the regulatory agencies need not be as restrictive in preventing mergers in a rapidly growing area as in a slow-growing or stagnant area is presumably based on the belief that economic growth would, in and of itself, intensify competition and would tend to offset high levels of concentration. There are several intuitively appealing reasons why this might be the case. If the economy of an area is growing, there may be a stimulus toward more intensive competition as the aggressive competitors in the area attempt to obtain new customers and also to secure the old ones whose accounts become more valuable. Moreover, marginal banks that might otherwise offer little in the way of effective competition, either because of their small size or limited management, would have an opportunity to grow with their area and to become more vigorous competitors. Finally, in a growing area, there is likely to be room for new entry, either by branching or new charter. Banks in other areas and other entrepreneurs will see an opportunity for profit. Bank supervisors should see a "need" for new facilities.

The above arguments may seem persuasive to many in the banking community. However, the regulatory agencies should not accept them easily. It is by no means obvious that the prospects of obtaining new business will stimulate banks to more effective competition. This would seem to depend on the extent to which banks find it profitable to compete. In a highly concentrated market, it may still be more profitable to follow customary rather than competitive patterns of behavior. Indeed, evidence from the experience of other industries suggest that competition frequently becomes intense, not when conditions are prosperous, but when they are depressed and there is pressure on earnings. I would suggest that we simply do not have enough evidence to state with assurance the effect of the rate of economic growth and changes in the rate of growth on the competitive behavior of banks.

On the other hand, there probably is enough evidence to state that economic growth can, at times, convert a marginal competitor to a larger and more effective competitor. Much would depend on the attitude of management. But, at the same time, such banks may also be very attractive merger partners for larger banks. If a permissive policy is adopted, it is difficult to see how this source of increased competition would be realized.

There should, nevertheless, be room for new banking facilities in a rapidly growing area whereas there might not be room in a slowly growing area. But whether or not the new growth is accommodated by "inside" banks on the one hand, or "outside" banks and new charters on the other, depends in part on the attitude of bank supervisors who regulate branching and new charters, and also in part on the aggressiveness of the larger banks already in the area. If the large and aggressive "inside" banks are permitted to acquire the most favorable office sites through *de novo* branching or merger, particularly with financial marginal institutions—and they have some real advantages in finding them—the entry of new organizations may be quite limited. The establishment of new branches, and mergers with marginal institutions may make it more difficult for new entrants to become established in the fringe areas. In the long-run, the effect would be to maintain the same or even higher levels of concentration.

There appears to be, however, an inverse relationship between concentration and growth. Slow growing areas often have higher concentration ratios than rapidly growing areas. This is understandable. Regulatory policy, which in part is aimed at protecting existing banks from excessive competition, tends to be restrictive toward new entry in stagnant areas and perhaps somewhat more permissive towards mergers. The observed inverse relationship between economic growth and banking concentration has, it should be noted, taken place within a framework of bank supervision that has not been permissive toward mergers in rapidly growing areas.

There is no way of knowing with certainty what kind of relationship between concentration and economic growth would be observed over the next decade if merger policy were to become less restrictive in growth areas. However, as indicated, it seems the competitive benefits deriving from the growth of marginal banks would disappear through acquisition. While there would still remain the possibility for new entry by branching and new charter, the extent to which competition would be benefited from these sources would depend on the extent to which existing banks would strengthen their positions in marginal areas and also on regulatory policies which differ from state to state and, sometimes, from one Comptroller of the Currency to his successor. In any event, it seems doubtful that the regulation of mergers, in the present institutional environment, should be based on assumptions about regulatory policies toward branching and new charters. Finally, as noted, the apparent stimulation of competition among existing competitors when new business is at stake seems dubious, depending, as it does, on hypotheses that have not, to my knowledge, been adequately tested.

If it is not reasonable, in evaluating the competitive effects of mergers, to rely on economic growth in banking as an offset to higher concentration, it does seem reasonable to conclude that merger policy should be viewed as a complement to economic growth in highly concentrated markets. In an unregulated industry, economic growth and the prospect of high return would tend to attract new capital; and if entry barriers are not too high, this should result in an intensification of competition. In a regulated industry like banking, where barriers to entry and concentration are high in part because of regulation, economic growth should be given the opportunity to produce the degree of competition more prosperous conditions make possible. This means, by and large, permitting new entry to meet rising demands for banking services and also permitting marginal banks to emerge as effective competitors. It is in the slow growth areas that marginal banks are not likely to emerge as effective competitors, and new entry may also be unlikely whatever regulatory policy.

While a more lenient policy toward mergers in growth areas on competitive grounds seems unwarranted as a general proposition, there may, nevertheless, be some justification for such a policy on grounds of convenience and needs. A growing area develops large demands for bank credit. Small local banks may not be able to meet such demands, because of the volume of their resources, their loan limit or simply their customary ways of doing business. It is quite conceivable that, in some cases, mergers in growing areas would involve benefits to the community that offset any anticompetitive impact. This would be particularly true in the absence of banks suitable in size and approach to meet the demands for banking services generated by growth. But just as in the analysis of competition, generalization is difficult, and a careful study of the likely benefits in each case would be required.

It may be concluded that an easier policy toward mergers in growth areas is not warranted as a general proposition. There may, however, be some cases in which the effect of mergers on competition in such areas is offset by the advantage to the community in convenience and needs.

CONCLUDING REMARKS

From the above discussion of several key issues relating to bank merger and bank holding company acquisitions, I am personally convinced that important differences exist among the supervisory agencies in the way they carry out their statutory responsibilities. However, I see no ready means of resolving these differences in the near future, although interagency consultations may be helpful. Beyond that, from the pattern of court decisions in the several cases challenged by the U.S. Department of Justice there may come a set of guidelines further sharpening the antitrust standards of the Bank Merger Act.

In the meantime, to meet the growing demand for banking services, the nation's banking structure must also grow and adapt. Innovations in banking services in particular markets must be allowed to come forth. However, although acquisitions under some circumstances may have a beneficial effect on competition—and often on the convenience and needs of the public—we must carefully guard against the anticompetitive possibilities implicit in widespread acquisitions among banks.

TABLE IV.—ADVISORY OPINIONS OF BOARD OF GOVERNORS, FEDERAL RESERVE, TO OTHER BANKING AGENCIES, 1966-68 [1]

	To Federal Deposit Insurance Corporation	To Comptroller of the Currency	Total
Anticompetitive effects:			
Serious	27	67	94
Not serious	94	137	231
Total	121	204	325

[1] January 1, 1966 to July 31, 1968.

Note.—Between May 29, 1967 and July 31, 1968, the Board's opinions have indicated one of 5 terms describing anticompetitive effects. These, in order of the seriousness of the effect are: (1) monopoly; (2) substantially adverse; (3) adverse; (4) slightly adverse and (5) no adverse. The first 3 categories are considered to involve serious anticompetitive effects. Prior to this period, the Board's opinions did not use standardized terminology; however, the reports themselves were reviewed and classified on the 2-way basis indicated in this table.

FOOTNOTES

[1] Nevertheless, since 1964, there appears to have been an upward trend in holding company activity. The following data are for Board decisions in holding company cases, rather than applications: 1964, 11; 1965, 17; 1966, 26; 1967, 31. There may be at least 33 decisions in 1968.

[2] A little more than ⅓ (37 per cent) of the Board applications have been for mergers; the remaining applications have involved holding companies.

[3] For the technicians who may be interested, the relationships appearing in the pattern of merger decisions were tested statistically. Cross classifying Board and "other agency" decisions by "approvals" and "denials" permitted a nonparametric contingency test which yielded a chi square value of 13.7. This value is significant at better than the 1 per cent level and supports the hypothesis indicated above.

[4] Cross classifying Board findings of serious and nonserious anticompetitive effects, in advisory opinions by "approvals" and "denials" by other agencies permitted a nonparametric contingency test which yielded a chi square value of .48, which cannot be taken as significant.

RATIFICATION OF HUMAN RIGHTS TREATIES FULLY CONSISTENT WITH U.S. CONSTITUTION

Mr. PROXMIRE. Mr. President, one of the most persistent fears which has stood in the way of ratification of the three human rights conventions concerning genocide, the political rights of women, and forced labor has been that these treaties could negate certain provisions of the Constitution. Although this concern has been widespread and has frequently been used as an excuse for failure to ratify the treaties, it has no basis in fact.

Justice Story made it very clear that the treatymaking power must be subject to those provisions of the Constitution establishing the Government and imposing express limitations on its powers:

A power given by the Constitution cannot be construed to authorize a destruction of other powers given in the same instrument. It must be construed, therefore, in subordination to it; and cannot supersede or interfere with any other of its fundamental provisions. Each is equally obligatory and of paramount authority within its scope; and no one embraces a right to annihilate any other.

Mikell in his article, "The Treaty Making Power," published in the University of Pennsylvania Law Review outlines those cases where a treaty would transcend the Constitution:

A treaty or treaty provision would transcend the Constitution if the treaty: (1) Alters the form of government, (2) Alters the departmental structure of the Federal Government, (3) Alters the constitution of any of the branches of government, (4) Deprives the Federal Government of a delegated power, (5) Exercises a power confided to another branch of government, (6) Exercises a power prohibited to the Federal Government or reserved to the States.

None of the human rights treaties fall within these six cases where the provisions of the treaty would transcend certain provisions of the Constitution. Ratification of the treaties would not limit individual rights—on the contrary, it would expand them. Thus the argument that ratification of the treaties could violate constitutional provisions simply is not valid. We can no longer accept this argument as a basis for continued failure to ratify these important conventions. The Senate has the responsibility to act on these treaties now; there is no justification for further delay.

SUPPORT FOR AN END TO THE WAR IS BROADER AND DEEPER THAN EVER BEFORE—COSPONSORS OF SENATE RESOLUTION 270

Mr. CHURCH. Mr. President, support for an early and complete disengagement from Vietnam keeps growing.

A popular government cannot remain indifferent to the rising opposition of the people toward prolonging our participation in this war. In the past two national elections, the people voted for peace. Yet, all they got was more war. The reluctance of the Government to heed public opinion is the underlying cause for the massive outpouring of pentup feeling that occurred on October 15, moratorium day.

Now that the President has commenced to withdraw from Vietnam, the people would like to see the process speeded up. At the present rate of withdrawal, American troops will be engaged in Vietnam for the next 8 to 10 years. The present policy, dependent as it is on Saigon and Hanoi, waits upon the pleasure of foreign governments whose interests differ diametrically from ours. We should take back the timetable into our own hands, where it belongs.

Last week, the distinguished senior Senator from Oregon (Mr. HATFIELD) and I introduced a bipartisan resolution, Senate Resolution 270, expressing the sense of the Senate that the time has come for the South Vietnamese people to take charge of their own destinies, and calling for "a more rapid withdrawal of American troops, and a commitment by the United States to fully disengage from South Vietnam pending such reasonable interval as may be necessary to effect an orderly transition on the battlefield, and

provide for the safety of American troops and those who may wish to leave with them."

Mr. President, the welcome response to our invitation to cosponsor this resolution is another indication of the growing sentiment for peace in the Senate. To this date, a total of 18 Senators have endorsed the resolution. This represents the high water mark of Senate support for any resolution calling for an end to the war in Vietnam.

Mr. President, I ask unanimous consent that the following Senators be listed as cosponsors on the next printing of Senate Resolution 270:

The Senator from Indiana (Mr. BAYH), the Senator from North Dakota (Mr. BURDICK), the Senator from New Jersey (Mr. CASE), the Senator from California (Mr. CRANSTON), the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Michigan (Mr. HART), the Senator from Minnesota (Mr. MCCARTHY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Montana (Mr. METCALF), the Senator from Minnesota (Mr. MONDALE), the Senator from Utah (Mr. MOSS), the Senator from Wisconsin (Mr. NELSON), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Maryland (Mr. TYDINGS), and the Senator from Ohio (Mr. YOUNG).

The PRESIDING OFFICER. Without objection it is so ordered.

Mr. DOLE. Mr. President, will the Senator from Idaho yield?

Mr. CHURCH. I yield.

Mr. DOLE. The Senator indicates that the cosponsors of his resolution (S. Res. 270) represent the high water mark of Senate support for any resolution calling for an end to the war in Vietnam.

May I remind the Senator that Senate Resolution 271 is sponsored by 36 Members of this body, and calls upon the North Vietnamese—the enemy in this conflict—to do certain things.

For the RECORD, I wish to emphasize that there are 36 sponsors of that resolution.

Mr. CHURCH. I am familiar with the Senator's resolution. I think that if he reads carefully the text of my remarks, he will find that they do not need revision.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. ALLEN in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MR. PRESIDENT—NOT ENOUGH

Mr. YOUNG of Ohio. Mr. President, President Nixon last spring announced he favored increasing social security benefits by 7 percent. With a surplus in the social security and social security disability fund of nearly $30 billion—which is a tremendous surplus—certainly payments to men, women, and children should be increased to 15 percent. If they were increased to 15 percent, the social security fund would still continue to be an actuarially sound insurance system.

Social security is the greatest legislative achievement of President Franklin D. Roosevelt's administration. Conservatives of that period denounced it as state socialism and sneered that Americans would be wearing "dogtags." The Republican platform of 1936 pledged repeal. Its candidate, Gov. Alf Landon of Kansas, a good man, carried but two States. It has since been unthinkable for any political party to oppose the social security program.

A young worker today is building insurance for his family that could pay thousands of dollars in benefits should he become disabled or die before his children are grown. Today, 1,300,000 disabled workers under 65, and 1 million dependent children each month receive social security checks averaging $235. Many Americans are unaware that changes in the law now provide payments in early and middle years. For example, a young worker disabled before the age of 24 with 1½ years of covered employment during the preceding 3 years qualifies for social security payments as long as he lives. Also, children of a working mother covered by social security who dies or becomes disabled are immediately eligible for payments regardless of the father's income.

President Nixon proposed a 7-percent increase in social security benefits; recently he increased that proposal to 10 percent, effective not earlier than next April. Unfortunately, there is no delay in the ever-increasing cost of living and a long, cold winter is approaching, particularly for lower income families.

Social security is, and it will continue to be, and it must continue to be, an actuarially sound insurance system. Payments to the 25 million men, women, and children now receiving social security benefits could be and should be increased 15 percent, and without delay.

REPEAL THAT GULF OF TONKIN RESOLUTION

Mr. YOUNG of Ohio. Mr. President, in the final session of the 89th Congress on March 1, 1966, I report with pride that my vote was recorded in support of a resolution to repeal the Gulf of Tonkin resolution which was passed in the Senate following misrepresentation of facts from the White House and aided and abetted by officials of the National Security Council and Central Intelligence Agency falsely claiming small North Vietnamese gunships had fired upon our destroyers, including the destroyer *Maddox*.

Mr. President, hindsight is much better than foresight. Looking back on it, that assertion seems preposterous. The *Maddox* was accompanied by other destroyers of the U.S. Navy, but the *Maddox* alone could have destroyed every one of those small gunships that were falsely alleged to have attacked the *Maddox*.

President Johnson used this alleged incident to obtain authority to send hundreds of thousands of men of our Armed Forces overseas into Vietnam to wage an undeclared, immoral major war in that faraway country.

There were only five U.S. Senators at that time who voted to repeal the Gulf of Tonkin resolution. I am glad to report I was one of those five. The others were Senators FULBRIGHT, MCCARTHY, Morse, and Gruening.

Mr. President, I have prepared and am submitting a resolution to repeal the Gulf of Tonkin resolution.

The PRESIDING OFFICER. The concurrent resolution will be received and appropriately referred.

The concurrent resolution (S. Con. Res. 42), which reads as follows, was referred to the Committee on Foreign Relations:

S. CON. RES. 42

Resolved by the Senate (the House of Representatives concurring), That, under the authority of section 3 of the joint resolution, commonly known as the Gulf of Tonkin Resolution and entitled "Joint Resolution to promote the maintenance of international peace and security in southeast Asia", approved August 10, 1964 (78 Stat. 384), such joint resolution is terminated upon passage of this concurrent resolution.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that I may be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Is there objection? Without objection, the Senator is recognized for not to exceed 15 minutes.

THE NOMINATION OF HON. CLEMENT F. HAYNSWORTH, JR., TO BE AN ASSOCIATE JUSTICE OF THE SUPREME COURT

Mr. BAKER. Mr. President, at a special news conference convened in his office yesterday, President Nixon reaffirmed his support for Judge Clement Haynsworth and stated he had examined in detail the record made by the Senate Judiciary Committee, and that he had absolutely no doubt that Judge Haynsworth is a man of integrity and honesty.

I have read the transcript of the news conference, Mr. President, and also examined the charges that have been raised against Judge Haynsworth and their denial by Senator COOK and others before the Senate.

I share the judgment of the President as to the honesty and integrity of this distinguished nominee.

I believe that if any Senator examines in detail and depth the so-called appearances of impropriety that have been raised, rather than taking a rigid position based on superficial reasoning determined by philosophy or ideological persuasion, he will reach a similar judgment.

If that approach is used, then I am convinced that the nominee will be confirmed by this body by an overwhelming vote.

Some are now saying the President should withdraw this nomination because there are appearances of impropriety that have been created; but I ask, in all due deference, "Who created those ap-

pearances?" Clearly, in my view, not the distinguished nominee, for, as I have said, any objective analysis of the record will clearly indicate to the contrary. The so-called appearances of impropriety so often alluded to in debate on this floor have been created, in my judgment, not by the nominee but by the debate, the newspaper accounts, the reports, the innuendo, the rumor, the imcomplete analysis of the 700-page record compiled by the Senate Committee on the Judiciary.

But even if this be the fact, it is being contended that while the ethical questions that have been raised were not warranted, or were without foundation, since doubt has been raised the President should withdraw the nomination. However, as the President has said, and said only yesterday, to pursue that course of action would mean that anyone who wants to make a charge can thereby create the appearance of impropriety, raise a doubt, and then demand that the nomination be withdrawn. The President rejected that course of action, and I commend him for it.

To allow a man to be victimized in this manner would be contrary to our system, and would obviously mean that a nomination could be defeated for a good reason, for a bad reason, or, as in this case, for no reason at all.

Mr. President, I have great respect for this body, as I have deep and genuine respect for the underlying genius that created our tripartite system of central government, consisting of the executive department, the two branches of the legislative department, and the judiciary, each having a rather exquisite set of checks and balances, prerogatives, and overlapping jurisdiction with the others. This insures that there is a consensus expressed by the machinery of government that fairly and clearly represents the will of the people themselves.

The Senate is now engaged in one of its unique jurisdictional undertakings—the responsibility, under the Constitution, that it advise and consent with the President of the United States on the confirmation or the withholding of confirmation of a nominee for the highest tribunal the only constitutional tribunal, in this Republic.

I think it might be appropriate, for the moment, to examine in detail the responsibility of this body in that respect. Clearly, I believe, the President and the Senate have concurrent responsibility and concurrent jurisdiction in the matter of selecting the members of that constitutional tribunal, the Supreme Court of the United States, in this case specifically an Associate Justice of the Supreme Court.

I have no quarrel with those who say that the Senate must not act as a mere rubber stamp, giving automatic or pro forma approval to any nomination sent by any President to the Senate at any time. I do believe that our jurisdiction is as great as that of the executive department; otherwise, the phrase "advise and consent" would have no meaning. But there is one principal constitutional distinction between the responsibility of the President and the responsibility of the Senate. As it clearly appears from the Constitution, only the President can initiate a nomination. The Senate may consider only those nominations so initiated; and, in considering nominees for the highest tribunal, it is the responsibility of the Senate to examine every fact and every facet involved in such nominations.

It is my purpose now to urge my colleagues to do precisely that; and, with all due respect, even with my great reverence for this body, to suggest that they have not yet done it. The debate thus far has been altogether too detached from the record compiled by the Committee on the Judiciary. The debate thus far has dealt too much and too often with "the appearance of impropriety," and too little with the fact and substance of the nominee's record as adduced by the committee.

I believe it would be a tragic chapter in the relationship between the Senate and the judiciary if this nomination were not determined on the basis of the merits and facts of the controversy, rather than on the basis of innuendo. I believe, as I have stated before on this floor, that it is time we examined the facts and circumstances attendant upon this nomination, and stopped "shoveling smoke"—a phrase that was impressed upon me some years ago when I was in law school. It was then pointed out that too often law students and lawyers and, I am inclined to believe, legislators, even those in this august body, tend to become caught up in the emotions of the moment and to be attracted by the glitter of vocabulary instead of careful scrutiny of the record itself and the facts and circumstances on which a judgment should be based.

In response to that implication, either Justice Holmes or Judge Learned Hand—I have forgotten now which—made the charge that lawyers are prone to spend much of their adult lives "shoveling smoke"—that is, dealing in things other than the facts of the case at issue.

I admonish my fellow Senators, and I am confident that the Senate will not do so, not to engage in a smoke shoveling contest in connection with the confirmation of Clement Haynsworth to serve as an Associate Justice of the Supreme Court of the United States. I believe my colleagues, and the Senate as a body, will not engage in the luxury of innuendo as the basis for judgment, but rather will make their judgment on the basis of the facts. The facts have been clearly delineated in the hearing record, and on occasion in debate on this floor. I commend now, as I have previously, the magnificent statement made by the junior Senator from Kentucky (Mr. COOK), wherein he took, one by one, the charges, the inferences, the allegations, and the implications—not just those involved in the debate, but in the stories circulated in the press, from every source—and made a point by point, meticulous answer to all such charges. I said then and I say once again that it is the constitutional duty of every Member of this body to do what MARLOW COOK, the distinguished junior Senator from Kentucky, did, and that is to examine these matters and look the facts in the face.

The confirmation of the nomination of a man to serve on the highest court in this land must be so judged. It must not be judged on some inference of liberal philosophy or conservative philosophy, or some alleged bias of a prolabor or antilabor stand, because, Mr. President, if we do judge on that basis, we are setting up a constitutional principle that I believe none of us would consciously adhere to or approve of. If some say, as some have said, "I oppose Clement Haynsworth because his philosophy is too prolabor or too antilabor, or too liberal or too conservative," we are in fact saying by that allegation or that statement that we are going to choose the members of the Supreme Court of the United States based upon some artificial balance between liberal and conservative, prolabor and antilabor. Mr. President, for my part, I do not want a member of the Supreme Court of the United States, whether it be the Chief Justice or an Associate Justice, who is either pro or anti anyone in these United States. To say that Clement Haynsworth is antilabor implies that the maker of the statement would rather have someone who is prolabor; or to say that he is anti-civil rights, that he would rather have someone who is pro-civil rights.

Judge Haynsworth is neither, and no conscientious member of this Government, whether he be a Senator, a Justice of the Supreme Court, or the President of the United States himself can afford the luxury of being anything other than dispassionate, calm, and impartial in his judgment of what is best for this country and best for humanity.

So I reject out of hand the contention that we should judge on the basis of a philosophical bias of any sort, and say rather that we should examine this nominee as we should examine all nominees, on the basis of their competence, their qualification to serve and to serve well, to serve impartially and to serve judiciously the best interests of the people of this country, all of them, without breaking the population down into pro or anti anything.

Clement Haynsworth is uniquely suited for this difficult task. The President of the United States has chosen well. The Senate of the United States must examine the facts and not revel in innuendos or aspersions. We must come to terms with the judgment we must make, disregarding as we must so often disregard what its political impact will be at home with one group or another, and we must decide what is best for this country.

In my humble view, what is best for this country is a man who has the judicial impartiality to look facts in the face and call the judgments as he sees them, which is precisely what we must do also in judging this confirmation.

Mr. THURMOND. Mr. President, I commend the able and distinguished Senator from Tennessee for the fine presentation he has just made. It is my firm belief that when Senators read the record in the Haynsworth case, they will find that Judge Haynsworth is as well qualified as any man who has ever been nominated to be a Supreme Court Justice.

I am very proud that the Senator from Tennessee has seen fit to make the remarks he has made today.

Having known Judge Haynsworth, his father, his grandfather, and the distinguished family from which he comes, I am sure that the Members of the Senate and the people of this country will be very proud to have him serve as a Supreme Court Justice.

CLASSIFIED INFORMATION IN CONGRESSIONAL RECORD

Mr. THURMOND. Mr. President, looking back to the debate on the 1970 military authorization bill, I would like to bring to the attention of my colleagues two points which have caused me deep concern in the past 6 or 7 weeks.

The first point is the fact that this debate has revealed to our enemies vast amounts of classified information they could not have obtained otherwise. Second, it appears to me we are witnessing a direct challenge to the committee system as we have known it here in the Senate.

On point No. 1 regarding classified information, it is not my desire to bring into question the right of any Senator to challenge any item in any bill on the floor of the Senate. To do so would challenge the democratic process which has made our Government a powerful and influential one.

However, it must be recognized that in the 6 weeks the military procurement bill has been debated item by item, information on weapons systems vital to our defense has been spread across the public record for all to see.

During this debate the thought often occurred to me that our enemies would have been required to pay millions to espionage agents for the information revealed in a copy of the CONGRESSIONAL RECORD which sells for a few cents. It is not hard to imagine the excitement of Communist military leaders around the world as their interpreters pour over the CONGRESSIONAL RECORD and extract information vital to their development of an effective strategy against us. Can you imagine the copies of the CONGRESSIONAL RECORD which have been shipped to Russia, China, Cuba, and other unfriendly countries in the last month?

Mr. President, the opponents of these various weapons systems are not the only ones who have spilled our "military beans" so to speak, but those of us trying to defend these systems have also been forced to reveal classified data, knowingly and unknowingly, in an effort to preserve the strength of our Military Establishment.

Our entire military strategy and concepts have been enumerated in full. We have had to talk about the "2 and ½" concept and justify it. We have had to talk about our balance of deterrence, our commitments abroad, our strategy of attack, the strength of our Navy, the shortage of submarines, the approaching weakness of our manned bombers, the successes and failures of our antiballistic missiles, the characteristics of our new tank, the naval strategy involving our aircraft carrier forces, the approaching obsolescence of our Air Forces, the strategic concepts upon which the C–5A is based, and so on.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. THURMOND. Mr. President, I ask unanimous consent that I be permitted to continue for an additional 10 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, on two systems our debate has been particularly revealing, the ABM and the MBT–70.

In the lengthy debate on the ABM we precisely pinpointed the location of our planned defensive missiles, we discussed their capabilities and their weaknesses, we talked about the multiple independent reentry vehicle techniques, the size and power of our warheads, the number and range of our ABM's, the dispersion of our Sprints and Spartans, the expected points of interception, the problems with chaff and other countermeasures, and the strength and failures of the radars which control and guide these defensive missiles. This debate also laid bare the strength of our ICBM's, our Polaris and Poseidon forces, and the present makeup of our strategic bomber squadrons.

Furthermore, we revealed to a large degree exactly what we know and what we do not know about the military strength and plans of the Russians and the Chinese. Any schoolboy could plan the defense of his fort better if he knows how many slingshots, rubber guns, and dirt balls his opponents have prepared to use against him.

Regarding our revolutionary new tank, the MBT–70, we were forced to reveal its particular characteristics in an effort to justify its continued development. This being a joint project with West Germany, our allies must be in a state of shock over the fact we have unveiled to a potential enemy all the strengths and weaknesses of a vehicle in which they might some day have to place their young men and commit to a battlefield. It is likely the MBT–70 will be the last joint development project any nation will ever undertake with America, the land of open discussion.

Mr. President, I do not know what the answer is, but I hope it is something other than what we have just been through. All of these weapons systems have been reviewed and discussed at length in executive sessions of the Armed Services Committees of both the House and the Senate. In the past, certain classified hearings and reports of the committee have been available for Members of the Senate to examine if they wished.

It is not my suggestion that the Members of the Senate give unqualified support to the recommendations of the Senate Armed Services Committee. This committee has 18 members but we are not infallible, nor is the Defense Department, the President, the Bureau of the Budget, or any group involved in the defense of this Nation. Still, there must be a better way to get at these issues and deal with them in an effective way which will serve the best interest of all concerned. This must be accomplished with the recognition that more secret data vital to the survival of this country is heard by the Armed Services Committee than goes before all other congressional committees combined.

This problem is complicated by the fact that our enemies in this world operate in closed societies where the representatives of their people are more the servants of a powerful elite than the masters as in our country. Discussions of their military problems never reach the public ear or printed word and, therefore, they have an advantage because of the oppressive nature of the political systems under which they operate. While we cannot do anything about their system it does seem that some thought should be given to finding adequate methods to provide the necessary reviews and debates of our own military problems without the exposure which has just resulted in the Senate.

On the second point, we have witnessed in recent months a challenge to the committee system. We have seen members of other commitees use their committees to go into strictly military problems in an obvious challenge to the Senate Armed Services Committee. In addition, we have seen organized a bipartisan group of Senators and Congressmen working as members of an unofficial body called the Military Spending Committee of Members of Congress for Peace Through Law.

What would the members of this august body think if a similar nonofficial committee was organized to challenge the findings and reports of the Foreign Relations Committee, the Judiciary Committee, or the Finance Committee? If such a practice should become a custom we would have chaos, and each of us clearly recognizes the inherent dangers.

Now, Mr. President, I know some of the members of this military spending committee and they are good men who share a deep concern for the well-being of our people. But I wonder if they realize they are opening the door to the destruction of the committee system of Congress and embarking on broad vistas from which there may be no honorable retreat. They have assigned themselves to such groups and in so doing have demonstrated a lack of faith in the committee system as such.

Also, there are some other questions which should be raised. For example, what sort of impression would be created if 30 or 40 amendments were offered to the foreign aid authorization bill calling for reviews and studies of our foreign aid to each recipient in South America, in the Far East, in the Near East, and so on. Has the expenditures of these funds been analyzed in detail? Have cost effectiveness studies been made on each program in these various countries? Is it cheaper to feed an Indian or an Indonesian? Should not the General Accounting Office look into these programs? Have justification hearings been held on these expenditures? Where do these expenditures fit into our priorities?

In overcoming malnutrition, has the responsible committee determined what constitutes malnutrition and how many calories are needed to overcome it? What independent studies are available to support these requests? Is it cost effective to ship rice from Arkansas or Louisiana to Vietnam when Formosa could provide it cheaper? Should we not have studies on top of the hearings conducted by the responsible committees here in Congress on these subjects?

These unorthodox procedures of short-cutting committee work and organizing a parallel nonofficial committee has resulted in floor challenges poorly based in fact. But the result has been not victories for the opponents, but victories for our enemies who have learned classified information about our Military Establishment. Yes, we could go into daily executive sessions in these Senate debates, but would that serve the high purposes of democracy or enhance the image of the Senate in the eyes of the people? I think not.

Mr. President, these two subjects have been on my mind a great deal since the recent debate of the 1970 procurement bill began. There is no doubt that this bill has received the closest examination by the Senate in the history of this Nation. This examination has also served some useful purposes as well as bringing about the problem I have just discussed. For one thing, it is my opinion the Senate Armed Services Committee gave the 1970 military procurement the most careful study and review it has given a piece of legislation since I have been on that committee. This does not mean to imply that committee action in previous years has not been thorough, but today, more than ever, our military establishment is gigantic and its needs are consuming a large part of the budget dollar.

The debate on this year's military authorization bill amounts to a new phenomenon never before witnessed in the Senate. The requests of the military were about the same last year, during the Johnson administration, when no item was seriously questioned on the floor, even the expansive Sentinel ABM which involved a commitment much greater than the Safeguard ABM recently passed by a narrow vote. We have just witnessed here in the Senate during recent weeks an item by item challenge of many of the new hardware weapon systems vital to our national defense. It is an unprecedented situation, and I sometimes wonder if the "whiz kids of systems analysis" in the Department of Defense have not moved to the Hill.

Mr. President, secrecy is not bad when it involves the defense of our loved ones, our homes, our businesses, and our cities. There is a difficult area here, and we must find the right place to draw the line between the people's right to know and the point at which our security is being compromised. I believe that a fuller use of the committee system, working through the proper committees, is a part of the answer. Surely, we cannot continue to lay bare our military secrets as has been done during the debate on the 1970 military procurement bill.

NEED MORE HELP FOR RURAL WATER AND SEWER SYSTEMS

Mr. SYMINGTON. Mr. President, many nonmetropolitan Americans have every right to question our national priorities when we can put men on the moon, but are falling farther behind in the effort to provide modern conveniences for many of our smalltown and farm homes.

Out in the rural United States more than 30,000 smaller towns are still without water systems, and more than 40,000 without sewer systems. Despite scientific and engineering developments of recent years, Americans residing in these areas still must struggle against the hazards of bad water and scarce water; and communities without these advantages most of us take for granted are certain to lose out in their efforts to hold their people, attract newcomers and develop new industry. The lack of central water and sewer systems is much of the reason for rural decline and mounting numbers of distressed people moving in on our cities.

In recent years we launched an attack on this problem through the rural community water facilities program. The Farmers Home Administration of the Department of Agriculture has helped rural communities plan and finance 3,600 water and sewer systems in the first 8 years of the effort.

My State of Missouri is one of the three leading States in accomplishment under this program. However, we still need many more systems in rural Missouri than the 165 produced to date. Unfortunately, in the past 2 years, the program in our State has gone down from a pace of $14 million to $3 million a year. This results from lack of support in a war-heavy Federal budget for this kind of action in the interest of a stronger and better America.

Missourians and their statewide Farmers Home organization, so well administered in the past administration by State Director J. Everett Jose, put forth an outstanding effort to begin the task of overcoming the rural disadvantage in water and sewer services. We have been assured that Mendel Cline, succeeding Everett Jose as State director, also will make the most of every resource and opportunity to carry on the rural water facilities program; but more help is needed from the administration and the Congress.

The challenge of water and sewer development in rural areas is often compared to the challenge of rural electrification, which has been met so successfully that lights and power now flow to almost every farm home in the United States.

Rural electric cooperatives also have demonstrated in Missouri that they can render outstanding public service in helping the people of their communities provide long-awaited water and sewer systems, through the Farmers Home Administration program.

This civic effort by rural electrics is described in an editorial published in Rural Electric Missourian for September 1969. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WATER SYSTEMS ARE ESSENTIAL FOR RURAL PROGRESS

Rural leaders have long been aware of the important role that a good, quality water supply plays in the total rural development program. Industrial growth, recreation development and just plain wholesome rural living all are enhanced by the availability of a safe and sanitary water supply.

Good and adequate water is a serious problem in many areas of rural Missouri because ground water is very high in salt content. Drilling in these areas for individual water wells becomes a definite financial burden.

For all these reasons Missouri is one of the leading states in developing modern, central water systems covering small towns and countryside. Project financing through the Farmers Home Administration to date totals some $35-million in loans for Missouri rural water systems.

Our state ranks third, exceeded only by Texas and Mississippi, in the volume of its rural water program. Some 165 projects have been developed to date with 25 additional projects in advance stages of planning. Most of these systems are thriving. Some are having the expected difficulties that come with supplying a service to sparsely settled rural areas.

In addition, approximately 140 applications have been rejected because funds will not be available to finance them until after fiscal 1970.

Missouri's electric cooperatives have been instrumental in developing many of these projects. They have provided technical assistance and leadership in the development of these projects throughout the state.

With the knowledge gained from 35 years experience providing electric service in rural America, electric cooperatives in Missouri and other states can and should offer valuable leadership and advice during the difficult formative years of the rural water districts.

Water and electricity are two essential resources for the growth of any area. Electric cooperatives have provided the electricity—they can lend valuable assistance to the water districts.

THE CONDITIONS OF THE RURAL AGED

Mr. HARTKE. Mr. President, for the past 2 months it has been my privilege to conduct a series of field hearings into the problems of the rural aged on behalf of the Special Committee on Aging. During that time hearings were held in Iowa, Kentucky, Indiana, Arkansas, and Mississippi. In each of these States the problems of the rural aged were all too obvious: extreme isolation, inadequate diets, ramshackle housing, and infrequent medical treatment are but a few of the severe problems with which they must contend. In addition, they share with their urban contemporaries a common economic problem. Almost without exception their income is grossly inadequate to meet their needs. The minimum social security benefit of $55 which many of them receive is barely enough to maintain life from month to month. As well, many of the people whom I talked with have no income at all and must rely entirely on friends and relatives for the necessities of life.

If there is one conclusion that I came away with after the hearings, it is that this country has a positive obligation to make as comfortable as possible the twilight years of those who have served it so well. Let us not forget that these are the farmers and the miners and the laborers and the mothers who have time and time again shown their devotion to this country. Certainly, the true test of a nation's greatness is its treatment of those "who are about to leave the fair."

One man who feels very strongly that our country is wanting in this regard is the Reverend Nathaniel Machesky, O.F.M. Father Machesky has done much in the Greenwood, Miss., area to insure

that the last years of the aged will be dignified and happy. The statement which he delivered before the Special Committee on Aging at the Mississippi hearing, I found to be most powerful and moving. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON AGING

A case for action, immediate and meaningful, for the aging was established here this afternoon just as in every hearing conducted by the distinguished Senator from Indiana and by other members of his Committee on Aging.

There is, however, one dimension of the overall consideration which must be mentioned. This is the profoundly human dimension. Something mysterious, almost magical, happens to a person in need when he or she knows that somebody cares. For far too long aged people in our community have known—not felt—that few if any cared about them. Can any of you here this afternoon know what it means to have lived a life of backbreaking toil in cotton fields or cotton warehouses only to be told in the twilight of one's years that "if you were not so lazy you would have saved for your old age"? Or to be told, "If you had been a better parent you would have trained your children to look after you"?

I have looked into tear-filled eyes of old people who heard such things from social and welfare workers who used such a cruel way of reminding old people that they were a burden to society and if they happened to be black, they were somehow less than a person. I have heard old people say that they lived in the hope of one more Christmas because the little party for old folks here at the Center was the biggest day of their lives because it proved that somebody cares.

Gentlemen of this special committee, please carry to every member of your committee the voice of all the aging members of our community. They can point to a life of loyalty to the American system, they can show you a record of many years of hard work, they can tell you in a voice mellow with age, enriched with sincerity, that they have survived by their faith in America and their confidence in the American dream. Before their life's candle flickers out, they hope—oh, how they hope!—that America will show it truly cares. America should show it cares quickly and meaningfully by using the resources these aged persons have helped develop, by using it now to make every minute of their waning lives rich in contentment so that their loyalty, their faith and their hope will not have been in vain.

KANSAS HONORED BY SECRETARY HICKEL

Mr. DOLE. Mr. President, the State of Kansas was honored this month with a 3-day visit by Secretary of the Interior Walter J. Hickel and his charming wife.

For the Secretary, his visit was in most respects a homecoming, for it was near the town of Claflin that he was born and reared. It was my privilege and pleasure to accompany the Hickel party on a tour of our State which took him into each of the five congressional districts. It was obvious that the Secretary enjoyed every minute of his stay, and there was little question about the warmth of his reception.

The full account of this visit is related in a most concise and picturesque manner by Mr. McDill Boyd, noted Kansas publisher and outstanding citizen, who also accompanied the Hickel party on much of its swing around the State. I ask unanimous consent that Mr. Boyd's article, entitled "A Most Remarkable Man," and published in the Phillips County Review of October 16, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MOST REMARKABLE MAN

An engaging and dynamic man, the human side of Walter Hickel emerged at Claflin last Friday evening when his heart was on his sleeve as he visited with family and friends.

The Secretary of Interior, accompanied by his gracious wife, took time out from an extensive tour of Kansas last week to "go back home", and see his folks again. It was his first visit to Kansas since he was named to the Cabinet post by President Nixon, and after watching him relax at a family dinner, it was easy to see why he had said that if he came to Kansas, he was certainly going to visit Claflin.

Hickel reached down to tousel the hair of a nephew; and inquire of a little niece what had happened to one of her front teeth. Surrounded by 46 close relatives (he came from a large family) the group first went to dinner at the church basement; then to the high school football game; and wound up the evening with a reception when more than 100 relatives, down to second and third cousins, continued with the visit.

He and Mrs. Hickel have six sons of their own, and with two of them still at home, she cannot travel with him all the time, but was at his side constantly on the trip to Kansas. Commenting simply, he said; "When a man gets too big for his home town, he's too big to be useful to anyone else."

During half-time at the football game, he was at the microphone in the press box telling family and friends how good it was to be home again; and calling for teammates on the Claflin football team. The other three members of the backfield (Hickel was the quarterback at 135 pounds) all showed up as Hickel called for "42-right", a favorite play at that time.

Hickel is at his no inconsiderable best with questions and answers before audiences of any size. He fields questions promptly, directly, and intelligently. Audiences at Wichita, Salina and McPherson; the press corps at those cities as well as at Hays and Dodge City were captivated by his forthright approach. During his brief stay in Kansas, he had a capacity crowd at a Wichita luncheon; at a reception and dinner in Salina; at an airport reception in Hays enroute to Dodge City where he was the principal speaker at the Arkansas Basin Development Association before going on to tour Old Fort Larned, one of the Kansas installations under his supervision. He also visited the "Waiting Wives" at the Schilling Air Force base in Salina where families of veterans who are overseas await their return.

After a busy day and a half, he made the trip to Claflin to spend the night with relatives, and then took off for McPherson at 7 a.m. Saturday where another overflow crowd—this time a breakfast—greeted he and his wife.

The party then left for Lindsborg to participate in the Hyllningsfest parade before going on to Salina to fly to Lawrence where he visited the Haskell Institute, another Department of Interior installation, and attended the K-State-K.U. football game.

He didn't want to "just be a spectator"—and donned a Wildcat purple cap and rooted for the K-State team as vigorously as any other fan.

Following the game, there was a reception at the Ramada Inn, sponsored by Cong. Larry Winn of the Third district; and the Secretary and Mrs. Hickel then returned to Topeka for another reception, with Cong. Chester Mize of the Second district joining the party.

Cong. Keith Sebelius had been with the group on all stops in the First district; and Cong. Garner Shriver joined the group at Wichita and McPherson. Sen. Bob Dole, who was primarily responsible for scheduling the trip to Kansas, was at Hickel's side most of the way—but had a prior engagement at El Dorado Friday night, and missed the Secretary's visit with home folks.

Hickel has a remarkable record. He went to Alaska in 1940 (there were more children than needed at the old home place) arriving with 37¢ in his pocket. He went to work; later established his own business, and when Alaskan statehood was at issue, he became a driving force. He served on the Republican National committee for 10 years, and in 1966 was elected governor. When President Nixon invited him to become a member of his cabinet, he says quite simply:

"It was an honor, a challenge," he says, "but I didn't need a job. I accepted because there was a job to do, and I feel that most of the men around the President have the same feeling."

He points out in his public appearances that the Republican party is now "proposing, not opposing," and that many proposals now before Congress are held up because Congress is controlled by the opposition party.

"This is the first time a president has been elected in 100 years without control of the U.S. Senate," he says, "and every time I want to make an appointment to a high level post, I must get the approval of the Senate, controlled entirely by the Democrats. The same thing happens to legislation."

He feels that the best way to activate necessary reforms is to elect a Republican Senate in 1970 "that will work with the President."

But politics aside, his knowledge of his department; his dedication to the conservation of our natural resources, is astounding. He is a fighter, too—he won the Golden Gloves championship as a welterweight before going to Alaska—and it is not surprising that the large newspapers in the East who so vigorously opposed his nomination, have now made a complete turn-around, and hold Hickel in high esteem.

One example warmed my heart.

While governor of Alaska, (Russian fishing boats by the hundreds work off its coast) local fishermen were being consistently robbed of their traps, their gear, their fish by night-time marauders who would "sweep" inlets with large nets, stealing everything that could be netted.

Protests to Washington were of no avail, for the boats would be out beyond the three-mile limit before they were detected, and there was no way to tell one fishing boat from another.

So Hickel ordered a plane to fly over the area, and any time a Russian fishing boat was found in an inlet, to drop a can of paint on it. The coast guard cutters could then spot the offenders and get back the stolen goods.

A Russian emissary called to protest this summary action as a violation of the three-mile limit arrangement, and Hickel informed him in no uncertain words that he was not going to permit the Russian fishing thefts to continue. The matter was dropped; and the marauding fishermen stayed out of local waters.

It is Hickel's feeling that the Russians respect strength; and will take advantage of weakness. He has been invited to visit that country and will go if he can enter at Vladivostok, and spend two weeks "going anywhere I want to go".

He says that this is the right way to enter that country (not through Moscow). "We can get along with the Siberian area," he

says, "for it is only 20 miles from Alaska and we have many things in common."

A man of common sense, of ideals and ideas—a man who will never get too big for his home town, or lay aside his love for family—Walter Hickel and his wife are the kind of people you would like to have as next door neighbors.

STUDENT PROTEST

Mr. McINTYRE. Mr. President, uppermost in the minds of many Americans these days is the subject of student protest and one of its corollaries, the generation gap.

One of the most eloquent and carefully reasoned statements I have head on this subject appears in the October issue of the UNH magazine, a publication about the University of New Hampshire for parents of students and alumni of the institution.

In the cover article, Judge Bernard I. Snierson writes about "Student Protest and Revolt." Judge Snierson is a judge of the Laconia, N.H., district court, where he has gained widespread recognition for his counseling of young offenders. He is serving his second term as a trustee of the University of New Hampshire; and when the board of trustees last year established its student affairs committee, Judge Snierson was appointed chairman.

Because I think that what Judge Snierson has to say about student protest warrants widespread dissemination, I ask unanimous consent that his article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDENT PROTEST AND REVOLT

(By Bernard I. Snierson)

Let me be totally frank and honest. I confess to no superior knowledge to any of you in the area of student protest and revolt. These matters are being discussed on every forum and in every household. Very strong views are held by almost everyone and I expect no converts from among those who may disagree with me. If my thoughts have any value, however, they do have the benefit of some experience on the field of combat and a personal involvement on the scene. I recall (U.S. Senator) Norris Cotton once telling me that those who now consider him to be a real conservative should have known him when he was just a resident of Lebanon. He found a great deal more of the nation's and the world's problems to be considered from the Washington scene than could ever be apparent from any narrow, provincial approach without the benefit of actual dealing on a national scale with the great matters of worldwide significance.

Let's start with the high school graduate, particularly from a normal family background in a small or medium-sized community. At most liberal colleges and universities, he is suddenly confronted with an entirely new spectrum of ideas and concepts up to then unknown and unfamiliar to him by simple lack of exposure. He is for the first time called upon to meet new challenges and to venture into strange caverns of ideas and concepts heretofore unexplored by him. His first reaction may well be one of shock and considerable resistance, to hold onto his little world of comfort and security and freedom from unpleasantness. Very few of us who have graduated from small high schools have not found our secure little world of ideas shaken by the onslaught of the larger concepts we once thought outside the scope of our existence. If there is one characteristic common to most high school graduates, especially the bright ones, it is the sublime knowledge that they know everything, that any further education will merely solidify and extend presently held beliefs which they consider inviolable. The first shock comes when they meet and live with people of different backgrounds and with different ideas. Then suddenly comes the realization that the world is not static, that issues must be considered and met which they and their parents may even have failed to recognize as problems.

We have to accept the fact that today's youth is a different breed than he was 25 years ago. By reason of insight, knowledge and exposure, he is more psychologically and physically mature than we were a generation ago. Courses formerly reserved for colleges are now studied in high school. Instant television has, for example, brought into every home a graphic demonstration of tragic events heretofore read about only in cold print. One shot of police dogs snarling at defenseless blacks in Selma, Alabama, crystallized sympathy in one of our nation's most urgent problems of the day as nothing else could. So did the frightening sight of students in Willard Straight Hall on the Cornell campus armed to the teeth with rifles shock a public concerned with violence on our campuses. And I am convinced that at least some of our expression of opposition to the war in Viet Nam results from the fact that mothers and parents now can see the horrors of killing and maiming in the field in a far-off war which they find difficult to understand or identify with.

Further, we must recognize that today's youngsters are vitally concerned with the world around them and its massive problems, the vast inequalities of black and white, the inconsistency of poverty and starvation in the midst of unheard of affluence and ease of living, the problems of our urban ghettos and the cities, even the failure of our universities to assume an effective working membership in contemporary society, and particularly the spectacle of an unpopular far-off war from which we do not seem able to extricate ourselves, although I now have great hope that we are at last on our way to accomplishing this. This youth is concerned because it is his world and he wants to have a voice in determining its shape and content. He knows that the determination of these problems and their outcome vitally affects his life and he wants a part of the action. This is the world he is going to have to live in, and he knows that there is more to education than can be found in books and in the classroom. He wants to be given responsibility, and he insists on his right to express his viewpoint whether or not his elders agree with him.

And I see no objection to this. I do not expect the bright, concerned student of today to agree in all respects with me. But just as I am willing to listen to him, I think I have the right to ask him to consider what I have to say even though it might disagree with his concepts. I am willing to allow him to take part in those matters which will affect his life, but I must also insist that he act responsibly, reasonably, and in accordance with the fundamental rules of law which guarantee his right to be heard as well as mine. If he is going to be given responsibility in the making of decisions, then he must realize that he too must be accountable for the outcome of those decisions. He cannot claim the rights to freedom of expression, the right to dissent and to disagree, and at the same time deny me those same rights. If he objects to me acting in *loco parentis* toward him, then he cannot tell me that those words mean only "crazy like a parent".

He wants to talk to me about the generation gap, and I tell him there is no such gap except as he may create it by insistence that there is no other answer to his problems than his own solution. When I refused to accede to some request my children made to me when they were little, which I felt to be unwise, they always said, "But Dad, you don't understand!" And my answer was, "You really don't mean that I don't understand. You're simply saying, 'I don't agree'. Believe me, I do understand, and that's why I don't agree."

There really is not a vast generation gap between parents and the youth of today. We have taught them in the home those ideals and concepts common to us in our Judeo-Christian heritage: concern for others, for the downtrodden, the unfortunate, and the disadvantaged. When they act to rectify the inequities and injustices they find too prevalent in the world today, we should applaud them. We ask only that they express themselves within the framework of our democratic processes, to recognize that there are constitutional and legal processes available to right wrongs and to cure injustices. They cannot be allowed to take the law into their own hands, substituting their own consciences and personal concepts of what is right for the established procedures which alone protect both them and us. There is no place in our democratic society for the criminal, even the intellectual law violator who insists that he is acting from some higher law of personal conscience. We believe in the right, and are committed to the protection of all peaceful non-obstructive forms of protest. But protest that deprives others of the opportunity to speak or be heard, or that requires physical take-over of buildings to disrupt the educational process, or the eviction of administrators, the burning or confiscation of files and other property, is incompatible with the democratic process all of us depend upon for protection. It is also inconsistent with the nature and high purposes of an educational institution. The distinction is the difference between dissent and uncompromising resistance.

I cannot emphasize too strongly how unfair and dangerous it is to condemn the liberal student movement as a whole because of the violence and criminality of the few. Unlike the vast majority of the concerned liberal students, the militant has no interest in discussion or compromise. He really is an ideological criminal, breaking the laws we live by in favor of his concept of what he calls a higher law. He feels that his destructive action will force the establishment to listen and will somehow bring about a better world. He really has two targets: the establishment and the uncommitted onlookers who make up the vast majority of the students. And herein lies his power and the great danger which requires the most careful and delicate handling. He hopes to trigger a physical confrontation that will draw sympathy to his side by those who have no identity with his aims. In most cases of campus violence, to grant his initial demands does not bring peace. He simply escalates them beyond in order to make a political, as opposed to an academic, point. He hopes to draw bystanders into the melee, cause them to become physically injured or shaken up and so forced to take sides against the establishment which now has harmed them. This is exactly what happened recently on the Berkeley campus. Governor Reagan, in opposition to students' take-over of People's Park, saw fit to line the campus with helmeted, armed police standing with fixed bayonets while helicopters crisscrossed the campus spreading tear gas indiscriminately, a tactic heretofore by Americans reserved for the Viet Cong. As a result, thousands of students, up to that time completely unsympathetic with the student extremists, went to join them in People's Park for the first time as an expression of their disgust and resistance to this form of counter-violence.

We must separate the violent extremists from those who intelligently and lawfully express their dissent. We cannot meet arrogance, hatred, and violence with like emotions, or we drive to the militant those stu-

dents of good will and reasonableness who make up the majority. Those who urge revolution and sanction violence remain a minority, but they become influential beyond their numbers on the campus if we do not recognize that they are a special breed to be handled and treated not in a vacuum but with a view to the entire university community and its responses.

More and more young Americans refuse to accept any disparity between American ideals and American realities. I say there is something great about a generation that questions a doubtful war, questions racial injustice, questions poverty amid plenty, and is concerned with the vast social and economic problems convulsing our society. Let's keep that generation on our side by bridging any generation gap, by keeping open the lines of communication between them and us, by dealing swiftly and harshly with those who flaunt the rule of law to effect their purposes, but always recognizing that these youngsters have something to say, that they are not all irresponsible, and that they are not altogether wrong when they tell us that they don't like everything about the world we have created for them and they want to have a part in changing that world for the better. And above all, we must avoid suppressing the symptom of their complaints without administering to the disease.

The university may well be destroyed by the onslaught from both sides of opposing factions, on the one hand by those flaunting legal procedures and constitutional guarantees of everyone except themselves, and from the other side, by the wave of backlash to these illegal acts by those who may be willing to burn down the barn to rid themselves of a few rats. If it is, it will be destroyed, as John Gardner in a commencement address at Cornell so well expressed it, by the "savage crossfire between uncritical lovers and unloving critics. On the one side those who loved their institutions tended to smother them in an embrace of death, loving their rigidities more than their promise, shielding them from life-giving criticism. On the other side, there arose a breed of critics without love, skilled in demolition but untutored in the arts by which human institutions are nurtured and strengthened and made to flourish. Between the two the institutions perished."

But the university as the home of reason, persuasion, and free discussion in the search for truth wherever that search may lead us, will not perish. It will be preserved from the onslaught of both those who would destroy it from within, and those who in their attempts to meet the challenge inside the university would tear down and weaken its mission and purpose from without. Both of these assaults on our free institutions are equally dangerous. In our desire to cope with one, we must be careful never to fall prey to the other.

EVOLUTION OF A VIABLE AMERICAN POLICY FOR EUROPE

Mr. CRANSTON. Mr. President, our preoccupation with the problems of Southeast Asia since the early part of this decade has worked to the detriment of the evolution of a viable American policy for Europe. Once we are able to turn our attention back to this vital part of the world, we must deal with allies of long standing which now will forcefully demand the same equality in their relationships with us that we insisted governed our alliances with smaller Asian states. The difficult issues of the European and American roles in NATO must be met head on with the realization that European nations have matured and gained a new economic and political self-confidence which militates against the traditional dominant position of the United States economically and militarily.

As difficult as we find it to understand these subtle changes in relationships between nations, David Calleo, a noted American scholar of Europe, has brilliantly examined the ramifications for our European policy of a change in American mood in reaction to our involvement in Vietnam. Vietnam will undoubtedly affect Europe and Mr. Calleo's article, published in the Times of London for July 29, 1969, frankly discusses the possibilities of a changed role for both the United States and Europe.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHANGING U.S. MOOD COULD FORCE DEFENSE REVIEW

(By David Calleo, of the Washington Center of Foreign Policy Research)

European audiences these days are frequently warned of the dangers of reviving American isolationism. The term "isolationism" is misleading. Many supposed advocates are familiar names in Europe—like Fulbright, Mansfield, Galbraith or Kennedy—and are not easily classified as prewar American provincials. In a sense, neo-isolationism in the Government, universities and general population reflects not revulsion against foreigners, but an American revulsion against the United States.

It is not isolationism that is reviving in the United States, but humanism. Prodded by the prolonged agony of Vietnam, many Americans now perceive grotesque distortions in their Government's values. The United States, they believe, is sacrificing the quality of its national life to the demands of a military empire.

For those disposed to worry, it is not difficult to see ample evidence of America's militarization. The American regular armed forces, at 3,500,000, are larger than either Russia's or China's. In 1968, nearly 9 per cent of men of military age (between 18 and 45) in the United States were engaged full time by the military in contrast to 7 per cent in Russia and roughly 4 per cent in Britain and Germany.[1]

About 1,200,000 civilians in the Defense Department, several thousands in the diplomatic and intelligence bureaucracies, the scientists and professors on Government contracts, and much of industry's best managerial and technological talent have been drawn to the service of United States power. Increasingly, it seems, American elites are bemused by the stoic satisfactions of "world responsibility" and the Nietzcheen thrills of "crisis management".

All this is rather expensive. The American military budget is nearly $80,000m.—more than half again that of the Soviet Union by conservative estimate. Indeed, a Defence Department estimate in 1968 reckoned that, for $50,000m. each year, the United States could "buy" the entire military establishment of the Warsaw Pact, pay the men at American scales, and build their equipment in American factories.[2]

Given their country's domestic turmoil, it is not surprising that many Americans suspect an imbalance in the Government's priorities.

PRIORITIES CALL

These sentiments have clearly begun to affect the Congress. Last month, at the conclusion of a congressional conference on the military budget and national priorities, nine Senators and 35 Congressmen issued a sweeping statement attacking the military budget and demanding a drastic change in national priorities:

Since the end of the Second World War, we have spent more than one trillion dollars, or two-thirds of the total expenditures of our Federal Government, on armaments and armed forces. Today, 80 per cent of our federal expenditures go for defense and defense related costs—an amount greater than all federal, state and local outlays for social security, health, education, housing and agriculture.[3]

Moreover, the momentum of military spending is such, the report notes, that existing programmes will by 1973 or 1974 absorb any savings from ending the war in Vietnam. And anti-ballistic missiles (ABMs) could carry the military budget well beyond its present total. Therefore, the Congressmen conclude, nothing less than a radical re-evaluation of the defence budget can restore a sane balance to national priorities.

If opposition to military spending becomes widespread, as it may, what are the likely long-range consequences?

Tighter discipline over procurement and a general military reorganization might save considerable sums. But any serious reduction in the United States defence establishment may, in fact, be possible only if there is a corresponding cut-back in the military and diplomatic commitments which justify that establishment. Here, presumably, is the bridge between humanism and isolationism.

It is a bridge many people may not cross. Many oppose the war in Vietnam, for example, without dropping that view of America's world role which presumably justifies it. Others would have the United States withdraw from Asia, but are eager to support the American military hegemony institutionalized in Nato.

There is, nevertheless, a certain logic at work which may reach even to Nato. Indeed, Europe might seem an excellent place to begin seriously reducing America's excessive overseas involvements. The American public was talked into the present external commitments not to build a series of client regimes, but to buy time for others to regain their prewar strength or to build new nations. This strategy, if it is ever to be made to work, should logically start in western Europe.

COST PROBLEM

Once they think about it. Congressmen may find it increasingly hard to believe that countries with the populations, industrial resources and military experience of Britain, France and Germany could not organize some reasonably effective military coalition to counter-balance the Russians. Nothing would prevent the United States from attaching some troops to these arrangements. But 25 years after the Second World War, and 20 years after the founding of Nato, why should an American general continue to command Europe's armies, and why should the United States continue to take the principal role in running Europe's defence?

The argument that Europeans would prefer to be dominated by Russia rather than come to terms with each other is not likely to evoke much sympathy. It will be difficult to explain to a war-weary public why young Americans should be drafted for the defense of Europe, but not young Europeans. Moreover, Nato's net cost in foreign exchange—estimated in January, 1968, at $1,500m. an-

nually—is one of the principal causes of America's recurring balance of payments difficulties.[4] In the long run, it may prove easier to cut back Nato than to sustain the present controls on foreign capital investment.

Anyone interested in abdicating America's pre-eminent role in European defence will have little difficulty finding convenient military doctrines. The increasing capability for a rapid large-scale movement of troops has already inspired the Mansfield resolution advocating a substantial American troop reduction. It might also be noted that the majority of Warsaw Pact forces in central Europe consist of Czech, east German and Polish forces.

To some observers, counting these eastern forces as equivalent to their western counterparts seems disingenuous. There is also the widespread practice of comparing numbers of divisions without noting that the average Nato division in central Europe has nearly twice as many men as the pact division there, Indeed, American divisions are three times larger.

For several years, officials in the United States Defense Department have been arguing that an effective conventional defence of Western Europe is within Nato's grasp, and without any dramatic increase in European manpower or expense. An authoritative memorandum, released last October and widely circulated in Congress, while opposing American troop reductions, also concluded that when "real factors . . . rather than nominal formations" are counted, and when men and equipment, especially in air forces, are compared qualitatively, "we find a rough equality of numbers in central Europe and in the alliance as a whole". Any relative inadequacies spring from "readiness deficiencies that Nato has not thought worth fixing".

The main trouble with Nato, many agree, is the unwillingness of its principal European members to take its conventional defence seriously. Yet Britain, France and Germany alone have nearly 1,400,000 men under arms, alongside which the American European contingent of about 250,000 is relatively marginal. Perhaps placing the vastly greater European forces under an American commander has not been the best way to encourage Europeans to take the primary initiative in organizing their own defence.

There would probably be little question about an American devolution if conventional forces were the only consideration. But an essentially European defence of Europe would tend to suggest a serious nuclear deterrent for Europe—a force or forces which, however much coordinated with the American, would nevertheless be independent.

Americans, however, have always resisted this logic. Our formula has been "burden-sharing", which would leave nuclear deterrence exclusively to the United States—a formula which almost demands widespread American military presence abroad. Not only does credibility suggest stationing substantial American forces on the guaranteed territory, but it seems intolerable not to control the area's local military situation when America's own cities are, in effect, hostages for its defence.

The official conclusion is, therefore, not to reduce American forces abroad. But if strong pressure for troop reduction continues, another conclusion may be to abandon the concept of a single non-communist deterrent—at least in the Atlantic world.

The concept is anyways being undermined by another set of arguments arising in the ABM debate. If, in fact, Europeans will not organize a conventional deterrent against Russia, and have no credible nuclear forces of their own, then America's European commitment logically demands a first-strike capability against the Soviet Union. The implications for the arms race are not pleasing. Hence, it would not be surprising if there were a renewed interest in indigenous regional nuclear deterrents, especially where national nuclear forces already exist. Those who argue that such deterrents are redundant do, I believe, miss the main point.

COMMON INTEREST

It is not difficult to imagine ways to organize a European military coalition, coordinating conventional and nuclear forces. Such a coalition would doubtless only be "confederal" in form. Those powers with the principal resources would naturally have the principal say, even if the strong wishes of the others could not be ignored. But the common interest in military defence is relatively clear. Coalitions have functioned reasonably effectively before without requiring an artificial supergovernment.

All these schemes have been much discussed, but never taken seriously by governments. The status quo has been safe and comfortable and avoided the irksome tasks of coming to terms with ancient neighbours. But plans for the future of Europe which assume an indefinite continuation of America's pre-eminent military role may prove unrealistic.

Perhaps such developments can be described as an unfortunate resurgence of American isolationism. Perhaps they can also be seen as the gradual restoration of balance between Europe and America—to the profit of sanity in the latter and self-respect in the former.

DISAPPROVAL OF VIETNAM MORATORIUM

Mr. BENNETT. Mr. President, a movement such as the October 15 moratorium has a way of distorting actual public opinion. When the press and TV coverage was completed, one would think that all America stood with those people who intentionally or unintentionally are undermining the President of the United States in his quest for peace.

I still feel that the movement represents a small minority faction and that the publicity given to them far exceeded their strength.

I ask unanimous consent that a letter sent to me by a student editor in Utah, Norman Robinson, be printed in the RECORD. It reflects, I think, the view that on campuses and in cities throughout America a vast majority of our people ignored the moratorium movement and went about their activities in a normal way.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OCTOBER 12, 1969.

Senator WALLACE F. BENNETT,
Senator from Utah,
U.S. Senate,
Washington, D.C.

DEAR SIR: On Wednesday, October 15, many of my fellow students on this campus and many others throughout the Nation will demonstrate their disapproval of the present situation in South East Asia by not attending classes.

I for one will be in class that day.

My belief in the United States of America is great and my faith in Her leaders is great. While I do not plaudit or enjoy the situation which exists, I don't feel that my absence from classes will bring an end to the conflict, but rather hinder efforts for peace.

Because of my beliefs, I would like you and your associates to know that as a citizen of this beautiful and great land, I have desires for Peace and express my faith that you and other of this Nation's leaders will act wisely and with integrity in seeking peace.

Thank you.

NORMAN ROBINSON,
Editor, Student Newsppaer, Southern Utah State College, Cedar City, Utah.

TAX REFORM NO. 4: DEMOCRATIC STUDY GROUP TAX REFORM BOOK

Mr. METCALF. Mr. President, today I shall place in the RECORD another section of the tax reform book prepared by the Democratic Study Group in the House of Representatives. Today's section discusses many areas of interest including the repeal of the 7-percent investment credit, the tax treatment of cooperatives, the foreign tax credit, depreciation allowed regulated utilities, and the tax treatment of corporations.

The Committee on Finance has already announced decisions that it has reached in many of these areas. One important subject that should also be included in this area of discussion is the tax treatment of financial institutions.

The House bill took an important step forward by cutting back on the tax preferences presently afforded financial institutions. However, the Committee on Finance has already watered down the House provisions by accepting a proposal urged upon it by the American Bankers Association. The Wall Street Journal of October 17 contains a detailed and informative analysis of what the committee has agreed to do in this particular area.

Mr. President, I ask unanimous consent that the article, written by Fred L. Zimmerman, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATE UNIT REJECTS HOUSE PLAN TO BOOST BANK TAXES—MILDER ABA PROPOSAL VOTED

(By Fred L. Zimmerman)

WASHINGTON.—The Senate Finance Committee, continuing to water down the tax-reform bill, rejected a House plan for sharply increasing the taxes of commercial banks and substituted a much milder proposal from the American Bankers Association.

Committee Chairman Long (D., La.), announcing the decision, said nothing about the ABA, but explained that the committee had decided the bank-tax provision in the House bill was too "complicated."

Other sources said, however, that the committee's decision matched precisely the position the ABA had urged on committee members in private letters distributed to them the day before the vote. This was confirmed by John Holdton, an ABA lobbyist, who waited outside the room as the committee considered bank taxes.

The administrative assistant to one committee member said he had been given a three-paragraph letter from an ABA executive and told, "make sure your boss has this in his hand when the committee starts talking about bank taxes.

NAMES WEREN'T RECORDED

The names of members voting for and against the ABA proposal weren't recorded, but committee sources state that in recent closed drafting sessions the only members who seemed consistently to be pushing for major tax-reform legislation were Sen. John Williams (R., Del.) and Sen. Gore (D., Tenn.)

Several liberal Democrats on the committee are frequently absent from drafting sessions.

Republican members, who have a good attendance record, are said to be heavily opposed to most reform provisions of the House bill.

The decision on tax treatment of commercial banks was the major part of the committee's work in adopting a section of the bill regarding taxation of financial institutions.

The committee also lightened, but to a lesser degree, the House bill's provisions tightening the tax treatment of mutual savings banks and savings and loan associations.

This section on financial institutions is one of the biggest revenue-raising features of the House reform bill. The House version would increase Federal revenue by about $460 million annually, when fully effective. A staff official said yesterday's committee action probably reduced that projected revenue gain to about $150 million.

Because of this and earlier committee actions, the Treasury's expected revenue pickup from tax-reform legislation is dwindling considerably. The House measure eventually would raise nearly $6.9 billion a year through higher taxes on corporations and wealthy individuals. But this would be more than offset by sizable rate cuts and other tax breaks for low and middle-income persons.

REVENUE IMPACT UNKNOWN

The revenue impact of the Finance Committee's decisions so far isn't known. House sources are beginning to wonder if the committee will be able to vote much of a tax cut for individuals after it finishes diluting the House bill's reform provisions. Sen. Long, however, has suggested that the Finance Committee might vote for substantial tax cuts even if they would result in a big revenue shortfall. "After all," he remarked last week, "we're entitled to have some fun, too."

Next week the Finance Committee is due to vote on several other big revenue-raising items in the House bill, including elimination of the alternative capital-gains tax rate (annual revenue gain, $360 million) and reduction of mineral-depletion allowances (annual revenue gain, $400 million).

Based on earlier actions, it seems unlikely the committee will sustain the House decisions in those areas.

The committee's decision on commercial bank taxation centers on a feature of current law that allows commercial banks to maintain, for tax-deduction purposes, a bad-debt reserve of 2.4% of outstanding uninsured loans. If banks were treated as other taxpayers, they would be allowed a reserve totaling less than 0.2% of these loans.

HOUSE VOTED LOWERING RESERVE

The House voted to lower this reserve gradually to a level generally equaling the actual bad-debt experience of commercial banks, which is thought to be about 0.2%.

But the Finance Committee, as requested by the ABA, rejected the House plan and voted instead to trim the banks' bad-debt reserve to 1.8% from the current 2.4%.

Committee staff officials provided the following tentative assessment of the effect of the decisions on taxation of financial institutions:

According to staff estimates, commercial banks now are taxed at an effective rate of 23%. This would rise to 30% under the House bill, but only to about 25% under the Finance Committee version.

Mutual savings banks are taxed at an effective rate of 4% currently. The House bill would raise this to about 19%; the Finance Committee would raise it to about 13% or 14%.

Savings and loan associations currently are taxed at a rate of about 15%. The House bill would raise that to 29%, but the Finance Committe would raise it only to about 19%.

The committee adopted a House provision requiring financial institutions to treat gains from transactions in certain bonds as ordinary income rather than capital gains.

But the committee specified that through 1974 any gains on sales of bonds held currently will be treated as capital gains.

SAVINGS BANKS

The committee generally accepted the House provisions regarding mutual savings banks and savings and loan associations, but made two principal changes. Current law allows these institutions to compute bad-debt reserves by deducting 60% of taxable income. The House bill would reduce that figure to 30% over 10 years, but the Committee voted to reduce it only to 50%, over four years.

The committee added a new provision that would require these institutions to allocate evenly their 85% credit for corporate dividends received between income subject to tax and income that is untaxed because of bad-debt reserves.

A proposal, not contained in the House bill, to require the withholding of taxes on dividends and interest at their source was overwhelmingly defeated.

Mr. METCALF. Mr. President, I should also point out that on October 15 the Committee on Finance agreed to delete those provisions of the House bill, sections 431 and 432, which would have reduced the foreign tax credits available to taxpayers with income from foreign sources. According to published accounts the deleted sections would have gained about $65 million of annual revenue for the Treasury Department.

Mr. President, I ask unanimous consent to have printed in the RECORD the section of the "DSG Fact Book on Tax Reform" which discusses in detail many important areas of consideration contained in the House-passed bill. Tomorrow I shall place in the RECORD still another section of the book.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

DSG TAX REFORM FACT BOOK: SECTION THREE—CORPORATION TAXES

DISCONTINUE TAX-FREE EXCHANGES ON CORPORATE STOCK TRANSFERS FOR MERGERS AND ACQUISITIONS

The problem

The Federal Trade Commission estimates 90% of the 352 largest corporate acquisitions in 1967 and 1968 were tax-free transactions. Presumably most of them involved exchanges of common stock. Hence, under present law, the sale of one corporation to another involves widespread avoidance, or at least deferral, of capital gains.

Present law

Tax-free mergers under this provision include: (1) "statutory mergers" defined by the relevant state law; (2) exchanges of voting stock where the acquiring corporation has at least 80% of the acquired corporation after the transaction, and (3) exchanges of voting stock in the acquiring corporation for "substantially all of the properties" of the acquired corporation.

Pending proposals

H.R. 7489 (Mills) would change the law to deal with certain aspects of tax-free and tax-deferred mergers. H.R. 10180 also proposes changes designed to deal with the merger problem.

Revenue impact

Treasury has not provided estimates of savings that would result from provisions to end tax-free exchanges.

Proponents and opponents

Assistant Attorney General McLaren, head of the anti-trust division, was one of several government witnesses urging the Committee to work out remedial legislation. The AFL-CIO supports changes that would end tax-free transactions involved in the wave of mergers and acquisitions.

Administration action

Ways and Means was told that Treasury is undertaking a basic study of the general treatment of tax-free corporate reorganizations. This apparently is as far as the Nixon Administration is prepared to go now on the tax-free exchange problem. The Committee did not attempt to write legislation to deal with this problem.

House action

The House did not deal with the tax-free exchange problem in the tax reform bill.

Ways and Means Hearings, Volume 7.

DISALLOW CORPORATION DEDUCTION OF INTEREST ON MONEY BORROWED TO FINANCE MERGERS

The problem

A recent study disclosed that one of every six companies that made *Fortune*'s 1962 top-500 list has completely disappeared in the industrial warfare that has marked the greatest merger wave in history. Another study shows the value of firms taken over since 1967 totals $11.4 billion. The disturbing thing is that this corporate piracy is fueled by tax provisions that allow corporations to deduct interest payments on money borrowed to finance takeovers.

Present law

The law permits an acquiring company in a merger situation to trade bonds for stock in the target company. The surviving merged firm, as a result, pays tax-deductible bond interest rather than taxable stock dividends and gains a substantial tax advantage.

Pending proposals

The main anti-merger proposal is H.R. 7489 (Mills), which would limit deductions of interest on bonds and debentures used in mergers and acquisitions. H.R. 10180 is a similar bill.

Revenue impact

An FTC spokesman testifying at Committee hearings said the tax loss resulting from transactions involved in corporate mergers could total "hundreds of millions of dollars."

Proponents and opponents

Hamer Budge, chairman of the Securities and Exchange Commission, was one of several regulatory agency spokesmen who testified on the corporate merger problem. All urged the Committee to try to work out ways to curb the rash of takeovers.

Administration action

The Nixon Administration advised the Committee that Treasury is seeking to develop a regulation to distinguish debt from equity for purposes of determining whether an interest deduction will be allowed.

House action

The House bill provides that a corporation can not deduct more than $5 million in interest on certain types of indebtedness (bond, debenture, note or certificate) issued as consideration for acquisition of stock in another corporation, or acquisition of assets of another corporation if at least two-thirds of the total value of all the assets of that corporation are acquired pursuant to a plan of acquisition.

Ways and Means Hearings, Volume 7.

ESTABLISH EMERGENCY TAX ON EXCESS WAR PROFITS

The problem

Production of weapons and other war-related items is concentrated in aircraft and electronics firms and other segments of the so-called defense industry. These companies are in a position to make substantial profits over a sustained period at little risk, yet pay taxes at the same rates as other industries

that do not engage in high-profit defense work.

An emergency tax on excess profits was imposed on corporations during both world wars and again during the Korean War. The most recent version gave corporations two options: (1) pay a tax on profits in excess of those in a previous peacetime base period, or (2) pay tax on profits in excess of certain return on capitalized value.

Present law

There is no present law. The excess profits tax was repealed shortly after the Korean War ended.

Pending proposals

Several bills calling for re-enactment of such a tax were introduced in the House this session. H.R. 11907 (Farbstein) would impose a new tax on corporations equal to 37% of excess profit taxable income. Similar or identical bills are H.R. 11754. 11974. 11991. and 12256.

Revenue impact

It is estimated that taxing excess profits along the lines proposed in the House bills would raise around $10 billion a year.

Proponents and opponents

The excess profits tax approach would draw vigorous opposition from such business-orientated organizations as the National Association of Manufacturers and U.S. Chamber of Commerce.

Administration action

The Administration has neither commented on nor taken a position on these proposals.

House action

The House took no action on these bills.

Resource reference

Congressional Record, June 30, 1969, pp. 17842–17852.

REPEAL 7-PERCENT INVESTMENT TAX CREDIT

The problem

The 7% investment tax credit was enacted in 1962 to stimulate business investment in new machinery and equipment. It was liberalized somewhat in a 1964 rule change and suspended for a five-month period late in 1966.

Present law

Present law allows businesses to deduct 7% of the cost of new machinery and equipment from their federal income taxes (not taxable income). The first $25,000 is fully deductible. If more than $25,000 is claimed, however, the deduction may not exceed one-fourth of the taxes due after the initial $25,000 is deducted. Unused credit is carried both forward and backward.

Pending proposals

Pressure for repeal began early this year as a large number of bills were introduced. The Joint Economic Committee, in its April 1 report, said the first priority in tax reform should be repeal of the investment tax credit. Following discussion in the Democratic Study Group, the issue was taken to the Democratic Caucus and repeal was endorsed as a party objective.

Other proposals calling for repeal (some with exceptions) are H.R. 5250, 6233, 6770, 6791, 7040, 7045, 7746, 7585, 8144, 9195, 9762, 9852, 9893, 10253, 10339, 11545, 11017, 10669, and 11174.

Revenue impact

The Treasury has estimated that repeal of this tax forgiveness law would boost revenue $2.5 BILLION in 1970 and $3 BILLION in 1971.

Proponents and opponents

Main opponents to repeal during House consideration were the National Association of Manufacturers and the U.S. Chamber of Commerce.

Administration action

The Administration backs repeal.

House action

Repeal was a major provision of H.R. 12290, the bill to extend the surtax that passed the House, 210–205, on June 30, 1969.

The House included the same general proposal in H.R. 13270, the tax reform bill. It included these special exceptions: (1) unordered and unbuilt barges built for use on ocean-going vessels, pipeline for use on projects pending wtih the Federal Power Commission and machinery and equipment needed to complete the C5A program. The House bill also would provide a rapid tax writeoff provision to enable industry to amortize the cost of air and water pollution equipment over a 5-year period instead of the normal 20 years.

Resource references

See Ways and Means Report (H. Rept. 91–321).

ELIMINATE OPTION OF ORGANIZING MULTIPLE CORPORATION TO GAIN SURTAX EXEMPTIONS

The problem

The multiple corporation loophole stems from a provision included in the Revenue Act of 1950 as a break for small business. It provided a two-rate structure for corporate income taxes with the lower rate, called the surtax exemption, applying to the first $25,000 of corporate income.

Many large corporate organizations now carry on business with a series of separate corporate entities, dividing the total income of what is in reality one large enterprise among numerous entities, each claiming a surtax exemption. In many cases, the corporate entities are arranged so most have less than $25,000 of income. As a result of this substantial and unintended tax break, almost all the organization's income is claimed to be taxable at the lower rate.

The 1964 Revenue Act attempted to narrow this loophole by adding a 6% penalty tax on the first $25,000 of income of each corporate unit actually controlled by a larger corporate complex. This merely reduced the value of each surtax exemption from $6.500 (48% less 22% times $25,000) to $5,000 (48% less 28% times $25,000).

Present law

The first $25,000 of a corporate unit's income is taxed at a 28% rate rather than the regular 48% corporate rate. There is no limit to the number of separate corporate entities within a large corporate organization that can qualify.

Pending proposals

A number of proposals have been made to repeal the multiple exemption option. H.R. 5250 (Reuss and others) would repeal the option provision and limit companies to a single $25,000 surtax exemption. Identical or similar proposals are H.R. 229, 1039, 1119, 1379, 2142, 3655, 5196, 6206, 6233, 6721, 6769, 6770, 6791, 7040, 7045, 7346, 7585, 7980, 8144, 9195, 9691, 9759, 9762, 9852, 10044, 10237, 10253, and 11353.

Revenue impact

Treasury estimates eliminating the option, when fully effective, would increase revenue $235 million a year.

Proponents and opponents

Testimony against the proposal was presented on behalf of Retail Jewelers of America, Inc.; Genesco, Inc.; Diana Stores, Inc.; Rockauer Bros., Inc.; National Consumer Finance Council, and Volume Footwear Retailers Association. Supporters include the AFL–CIO and UAW.

Administration action

The Administration has proposed phasing out the option over five years. It would do this by allowing a corporate organization to claim no more than 100 surtax exemptions the first year, 50 the second, 25 the third, 10 the fourth, five the fifth, and one in the sixth and subsequent years.

House action

The House bill would eliminate multiple surtax exemptions by controlled groups or corporations over an 8-year period. During this time the amount of each additional surtax exemption would be reduced by about $3,000 a year.

See Ways and Means Hearings, Volume 10; Treasury Studies, Part 2.

REQUIRE COOPERATIVES TO PAY AT LEAST 50 PERCENT OF PATRONAGE DIVIDENDS IN CASH

The problem

Present tax treatment of cooperatives was set by Congress in the 1962 Revenue Act. It provides single tax treatment when certain patronage dividend provisions are met. Congress rejected the two-tier tax system, which would have imposed a corporation tax on cooperatives and made patronage dividends distributed to patrons taxable on the same basis as corporation dividends.

Present law

Under present law a cooperative (whether tax exempt or not) is allowed to deduct, in computing its taxable income, the qualified patronage, dividends allocated to its patrons. This deduction is allowed, however, only if at least 20% of the patronage dividend is paid to the patron in cash. Up to 80% of the remainder can be retained by the cooperative for expansion and other business purposes. Normally a certificate bearing a cash redemption date and covering the non-cash portion is provided to the patron. The patron, however, is taxed as if he received the entire patronage dividend in cash.

Pending proposals

H.R. 7318 (Gilbert), the only bill introduced to deal specifically with this issue, would tighten laws regarding tax exemptions for cooperatives.

Revenue impact

Revenue estimates are unavailable and the effect is considered negligible.

Proponents and opponents

Few witnesses touched on cooperative taxation during the hearings and the testimony received little notice. The National Tax Equality Association urged the Committee to recommend tighter restrictions on taxation of cooperatives. Former Rep. Joseph Resnick suggested a 5-year limitation on redemption of certificates (there is no limit now) and a cash payout requirement for patronage dividends of up to 80%.

Opponents of any revisions in cooperative tax law were not aware until the markup phase that Ways and Means was giving serious consideration to restrictive changes. However the National Council of Farmer Cooperatives and other spokesmen for cooperatives mounted a strong campaign against possible changes when it became clear they would be part of the House tax reform bill.

Administration action

No recommendations dealing with taxation of cooperatives were submitted by the Administration.

House action

The House bill provides that the patronage dividend deduction allowed cooperatives would be continued only if at least 50% of the dividend allocated is distributed in cash. The proposal includes a 10-year buildup to the 50% minimum mandatory requirement from the present 20%. It also would require cooperatives to redeem all retention certificates for cash within 15 years.

Resource references

Ways and Means Hearings, Volume 3.

ELIMINATE SPECIAL TREATMENT FOR STOCK OPTIONS

The problem

Stock options have had special tax treatment for many years. Any gain in value of stock issued to top executives and certain other employees now is taxed as capital gain rather than ordinary income when certain conditions are met. Further, when the option is a statutory stock option, special rules generally postpone the tax until the employee retires or the shares of stock are sold or exchanged. The stock option loophole was narrowed substantially, but not closed, in the 1964 Revenue Act.

Present law

Three types of stock options qualify for special tax treatment—qualified stock options, employee stock purchase plan options, and restricted stock options. In all three instances gain realized from sale or exchange qualifies for the lower capital gain treatment when the holding period and other requirements are met.

Pending proposals

Several stock option bills are before Ways and Means. H.R. 5250 (Reuss and others) would disallow capital gains treatment on the difference between the option price and the market value of the stock when the option is exercised. This gain would be taxed as ordinary income at the time the option is exercised. Identical or similar bills are H.R. 229, 1379, 2142, 3655, 5196, 6206, 6207, 6721, 6233, 7744, 6769, 7980, 6770, 10327, 7040, 7045, 7346, 7585, 8144, 9195, 9852, 10040, 10253, and 11174.

Revenue impact

It is estimated special provisions for tax treatment of stock options cost the Treasury about $150 million a year.

Proponents and opponents

Several witnesses, including a representative of the Association for Advanced Life Underwriting, testified against changes in taxation of stock options. The U.S. Chamber of Commerce also opposed all stock option changes in its general testimony. Most of the comments on this subject dealt with restricted stock option plans.

Administrative action

The Administration, noting that there has been rapid growth in restricted stock option plans, has asked that tax laws applying to these transactions be tightened. It would do this by providing that (1) where an employee receives stock or other property as a compensation, he should be subject to tax when his rights in the property become nonforfeitable, and (2) the amount subject to tax at that time should be the full current market value.

House action

The House bill generally adopts the Administration plan for tightening laws governing taxation of restricted stock plans.

ELIMINATE FOREIGN TAX CREDIT

The problem

The law since 1918 has permitted a tax credit (a credit is a direct writeoff of taxes rather than taxable income) for foreign income taxes paid by U.S. companies. It was designed to avoid double taxation of profits of U.S. businesses operating abroad.

The tax credit has been criticized a good deal in recent years, partly because of steady expansion of U.S. business activity abroad and partly because many feel foreign governments keep raising taxes on these companies at least as high as the level required to use up all the credit. The Treasury, as a result, gets little revenue from U.S. business activity abroad.

Present law

Under present law, the foreign tax credit can be taken (1) with respect to a first-tier foreign corporation only if at least 10% of the stock is owned by the domestic taxpayer, and (2) with respect to a subsidiary of such first-tier corporation only if at least 50% of its stock is owned by the first-tier corporation.

Pending proposals

None of the tax reform bills introduced in the House this session called for elimination of the foreign tax credit.

Revenue impact

Treasury reports that in 1966, the latest year for which tax return information is available for corporate firms, the foreign tax credit for all U.S. taxpayers totalled $2.9 billion. Firms classified as mineral and petroleum industries accounted for $1.3 billion of the total.

Proponents and opponents

Much of the criticism of the foreign tax credit has come from organizations that oppose preferential tax treatment of the petroleum industry. Changes to liberalize the credit were recommended to the committee by a long list of groups that included the U.S. Council of International Chambers of Commerce, Institute on U.S. Taxation of Foreign Income, and Manufacturing Chemists Association.

Administration action

Neither the Treasury nor the Nixon Administration recommended any changes in the foreign tax credit.

House action

The House bill provides that tax benefits claimed due to a loss in a foreign country could be recaptured to the extent of profits realized in subsequent years in that same country. Also, where the overall limitation is used, excess credit generated from foreign mineral income would not, under certain conditions, be used to reduce U.S. taxes on other foreign income.

REQUIRE REGULATED UTILITIES TO DEPRECIATE WITH STRAIGHT LINE FORMULA ONLY

The problem

Many regulated utilities, especially the larger ones, gain a tax advantage from the option allowed for computing depreciation. They can use straight line, which results in higher taxes, and get higher rates. Or they can use accelerated depreciation, which results in lower taxes and accumulates larger reserves, and pay out so-called tax-free "dividends" to stockholders. It is estimated that in 1968 private power companies alone made tax-free dividend payments totaling $260 million.

Present law

Under existing law many of the regulated utilities are able to make tax-free distributions primarily as a result of the use of accelerated depreciation.

Pending proposals

H.R. 6659 (Fulton) deals with authority of a regulator agency to require the flow-through of accelerated depreciation reserves to consumers.

Revenue impact

Treasury estimates federal revenue will be reduced as much as $1.7 billion a year eventually if state regulatory agencies continue to allow utilities to adopt accelerated depreciation.

Proponents and opponents

Chairman Lee White of the Federal Power Commission was a leading proponent of a straight-line depreciation requirement.

Administration action

The Nixon Administration recommended that tax-free dividends, currently paid out of accelerated depreciation reserves, be made taxable after a three-year phase-in period.

House action

The House bill would "freeze" the current situation regarding methods of depreciation for most utility companies. It would require gas and oil pipeline, telephone, gas and electric utility, water and sewage disposal companies to depreciate most new properties by the straight line method. And it would end tax-free distribution to utility stockholders resulting from accelerated depreciation deductions.

EMPLOYMENT OF DISADVANTAGED MEN AND WOMEN IN CHICAGO

Mr. SMITH of Illinois. Mr. President, I invite attention to an article on the JOBS program, published in a recent issue of Chicago Today. I feel that this piece does a fine job of describing their activities, and I consider it appropriate to be placed in the RECORD.

The Chicago Alliance of Businessmen has 610 member companies—200 more than in 1968. These companies have pledged nearly 33,000 jobs to be filled by hard-core unemployed by June 30, 1970. A total of 24,775 disadvantaged men and women have now been hired as a result of our program; and of those hired, 12,805 are successfully on their jobs today—a retention rate of 51.7 percent.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article ordered to be printed in the RECORD, as follows:

[From the Chicago Today, Sept. 9, 1969]

JOB TRAINING PROGRAMS—A BOOMING BUSINESS

(The demands of Negroes for more jobs in the high-paying construction industry has spotlighted the extent and adequacy of inner city employment training programs. The blacks claim they have been excluded from apprentice training programs which could fit them for more of the construction jobs which now total between 80,000 and 100,000 in the Chicago area alone. Outside the construction industry, however, job training programs are a booming business. Here's a report.)

(By Don Harris)

Job training programs of all descriptions—public and private—are a booming business.

From 1962 through June 30, 1968, the federal government spent 87 million dollars on manpower development and training projects in Illinois.

In addition, private industry invested millions more trying to get the so-called hard core unemployed into the economic mainstream.

During roughly the same period, the Illinois State Employment service, local administrator of manpower programs, placed nearly 1.5 million persons in jobs.

These programs figure to continue taking in "students" as long as business in general continues to boom.

At the first sign of an economic slowdown, however, the experts agree job training programs and the persons they are designed to help will suffer.

There is a program, funded by the manpower administration under the United States department of labor, for practically

every segment of unemployed and underemployed.

To fill the gaps, if there are any, private firms have set up their own array of jobs programs. Some are geared to train people how to get and hold a job. They don't teach a skill, simply good work habits.

Probably the most heralded of all is the J. O. B. S. [Job Opportunities in the Business Sector] program, sponsored by the National Alliance of Businessmen.

It is considered the most successful of all job training efforts because private industry is directly involved in the operation.

Locally, the Chicago Alliance of Businessmen is headed by Donald M. Graham, chief executive officer of the Continental Illinois National Bank and Trust company. The J. O. B. S. director is Glenn W. Ramshaw, Continental bank vice president.

Ramshaw, who heads a task force of 100 executives on loan to the N.A.B., is convinced that companies participating in the program are likely to benefit as well as the disadvantaged they hire.

He noted that these so-called hard core unemployed often develop into stable, productive employes.

The N.A.B. was created in January, 1968, and began its first drive on April 2, of that year. It met its goal to place 11,000 hard core individuals on jobs by this July 1.

Latest figures show 17,251 were hired with 9,094 still on the job. That is a retention rate of 52.7 per cent.

The Alliance's second year goal is to find jobs for 22,000 more disadvantaged unemployed by July 1, 1970.

To keep the N.A.B. going, nine executives, including two from the state employment service, were loaned for all of 1968. It is estimated that Chicago area businesses contributed one quarter of a million dollars in wages, services, and materials to the local program during the year.

The federal government has contributed more than 13 million dollars toward offsetting the added costs to employers of special training and counseling.

These funds are available to any firm willing to enter into a contract with the government. However, the involved recordkeeping that goes with federal funds has caused many companies to skip government help and bear the cost alone.

The N.A.B. works closely with the state employment service, Jobs Now, Tri-Faith Employment project, Chicago Urban league, Chicago Youth centers, Opportunities Industrialization center, Youth Action project, and the Chicago Federation of Settlement Houses.

Briefly, here is how some of these private jobs efforts operate:

Tri-Faith—considered one of the most successful ghetto-run employment projects in the country. About 35,000 applicants are expected to seek jobs thru Tri-Faith's six neighborhood centers this year.

Jobs Now—sponsored by the Y.M.C.A., the Chicago Urban league, the Illinois state employment service, and several other agencies. It seeks out applicants for orientation job preparation.

Chicago Federation of Settlement Houses—14 centers thruout the city are recruiting hard-core job applicants. Officials expect to secure 2,000 to 3,000 such job-seekers.

Chicago Youth centers—maintain contact with hard-core jobless at the community level.

Youth Action project—workers go into the streets in search of the so-called hard-core to be recruited and referred to job training programs. They plan to work with nearly 10,000 youth, including 4,000 hard-core.

Opportunities Industrialization center—a job-preparation effort originated in Philadelphia. Officials expect to identify 500 hard-core applicants for job referral here.

A workhorse in the entire job-training field is the state employment service.

The ISES is the local arm of the federal manpower development and training program. Tho it is a state office under the Illinois department of labor, it is funded entirely by the federal government.

It compiles and maintains an extensive list of job openings, points out where the greatest shortages in manpower are, and goes about the important task of matching people with positions.

Virtually all job programs rely in some measure on the ISES resources and information.

Walter E. Parker, ISES superintendent, commented on some of the changes that have taken place in recent years in the employment field.

Parker noted that many employers have reduced hiring requirements so that high school drop-outs have a better chance to get a job.

"This has been a big help toward solving the problem of the so-called hard-core unemployed," Parker said.

The ISES has been successful in getting many employers to do away with written tests that stood as a barrier to the undereducated. Nonverbal picture tests are being used much more extensively than ever before, Parker said.

In setting up a training program, the ISES works thru the state education department. Public school buildings are generally used for the training site.

In addition to the major job programs funded and directed by the federal government, here is a capsule comment on some lesser known projects:

Work Experience training—gives work experience to poor adults and youth to prepare them for regular jobs.

Operation Mainstream—pays older workers in rural areas and small towns to improve their communities.

Work Incentive program—helps people move off welfare rolls into self-supporting jobs.

Job training also is active in penal institutions. At County jail, federal money is used to prepare convicts for a job on the outside.

A recent comment by Rober P. Mayo, federal budget director, could spell trouble ahead for job training programs. Mayo indicated that the unemployment rate today "is better than we can hope for in the long run."

INTERVIEW OF PRIME MINISTER GOLDA MEIR

Mr. CRANSTON. Mr. President, the popular Prime Minister of Israel, Mrs. Golda Meir, was recently interviewed in New York by Michel Salomon of the ADL Bulletin. The interview provides an excellent insight into the policies and broad vision of Israel's able leader. On the vital issue of peace and war, Mrs. Meir said:

We are above all interested in having people live. Our ideal is neither to kill nor to die. But we will defend ourselves. At the same time, you will not find songs of war and glory in our streets. . . . Have you ever heard any Israeli proclaim that we must destroy Egypt or Jordan? We are happy that we can defend ourselves successfully, but there is no joy here in war. . . .

I ask unanimous consent, that this lively interview be printed in the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

[From the ADL Bulletin, October 1969]

INTERVIEW WITH GOLDA MEIR

(By Michel Salomon)

The last time I saw Golda Meir was several years ago in New York. She was a featured guest at an unusual fashion show—models showing *sheitels,* the wigs worn by ultra-Orthodox women. She showed great impassivity, looked tired and extremely aged. The woman I now interviewed in the office of the Prime Minister of Israel looked ten years younger—her face radiated energy and spirit.

"It is Egypt," Mrs. Meir said, "that has always drawn the whole Arab world into conflict with us. Since Nasser has been in power it is more than ever the country that makes the decisions. The other countries follow, not necessarily because they are in agreement, but because they know from past experience that they will be cooked otherwise."

I mentioned the idea of a separate peace agreement between Israel and, say, Hussein of Jordan.

"We are ready to sign a peace treaty with any Arab country," she replied. "Perhaps some day the Arab states will surmount their fears and their inhibitions and realize that they can tolerate no more suffering—you know that the Arab people suffer much more than we do from the continued belligerence. Perhaps some day one or two of these states will decide to make their own destinies and free themselves from Nasser's intervention in their affairs.

I asked the Prime Minister if she didn't think that Arab leaders might feel psychologically awkward meeting a woman as the head of a state that has defeated them. She smiled at the thought but said it would probably make little difference.

"What would you say to President Nasser if you met with him?" I asked.

"I would simply tell him," she replied, "that we want negotiations without any preliminaries or conditions." She paused as if to weigh the chances of such negotiations, and then she said sharply: "We will not make peace if each of us on his own side makes declarations on the radio. I do not know of any peace treaty which was signed in that way. But it seems that Nasser wants to regain what he lost in the war by issuing sweeping statements from his Cairo office or by ordering blind artillery fire at the Suez Canal. I'm afraid he will waste a lot of saliva and a lot of munitions. But he has had little success, and perhaps some day he will examine his conscience and will decide to let his own people live in peace and develop themselves."

The suggestion has often been made, I said, that Nasser sits on a fragile throne and cannot take the risk of peace. The Prime Minister bristled.

"He certainly took the risk of war," she said. "But if you are implying that the Arabs are governed by hopelessly irrational motivations, you are not entirely right. For if that were so, then this vital area of the world and its dozens of millions of inhabitants are destined forever to be led by people who can only take them from one war to another, from disaster to disaster, and who place on their shoulders an unbearable weight of suffering. Surely you know that the Egyptian standard of living is one of the lowest in the world, that their infant mortality is one of the highest. Must one accept with a kind of fatalism that this must be the destiny of thirty million human beings for all eternity?"

I saw a genuine compassion in Golda Meir's eyes. This momentarily fled, however, when I mentioned the obvious confidence the Egyptian people have shown in their leader.

"A man who brings his people a heavier burden of calamity with each passing day!" she exclaimed. "I don't know a people willing to be governed this way. But if it is the wish of the Egyptians, then why should Israel suffer for it? . . . Do we have to line up and drown in the Mediterranean to please Mr. Nasser? What actually disturbs me most is not Nasser, but those people who expect Israel to resign itself to this madness. Since Nasser has neither the ability to win wars nor the courage to make peace, Israel is therefore obliged to do something to help him remain in the saddle! That logic would

be laughable were it not so odious. Is it our sin that we won the war?"

Mrs. Meir's apparent bitterness on this point extends to those who accuse Israel of having been the aggressor in 1967. She said: "Recall the words of Nasser just before the Six Day War began—his triumphant laugh when he visited the soldiers in the Sinai. This was going to be the ultimate war for Arab purposes. Read again the orders of the day from Hussein to his army. My God, how normal people can reread these appeals to murder and then say that no one should have taken them seriously!"

And on the question of negotiation: "We are ready to meet at any time with Nasser, Hussein, anyone. Do you know of any historical precedent of a people, having been attacked and then having been fortunate enough to win the war and bring it into the homeland of the enemy, then themselves—the victors—having to beg for peace?"

The Prime Minister paused, leaned back and took a wistful look at the sunlight streaming through the window. Her face became both softer and more solemn.

"I will tell you a simple thing," she said, now speaking more slowly than before, "something far beyond the splitting of hairs. We have decided to live, to live *here* and to live in peace. It is as simple as that. The entire theory of the return of the Jewish people to the land of their ancestors is a peaceful concept. But if we must fight for our life, we will do so. And if the Arabs are incapable of conquering us in a war, we are not going to throw ourselves at their mercy in peace."

In the remainder of my time with Golda Meir I ranged over a number of topics on which she expressed herself.

On peace and war: "We are above all interested in having people live. Our ideal is neither to kill nor to die. But we will defend ourselves. At the same time, you will not find songs of war and glory in our streets . . . Have you ever heard any Israeli proclaim that we must destroy Egypt or Jordan? We are happy that we can defend ourselves successfully, but there is no joy here in war."

On the annexation of territory: "We did not fight the Six-Day War in order to annex territories. One must not take the effects for the cause."

On the question of Jerusalem: "How did the old city fall into the hands of the Jordanians—by an act of God? In 1948 the Arab legion of Abdullah occupied it with the aid of the British. Everybody was satisfied and accepted the fact that for nineteen years Jews could not visit the holy places there, and all Jews living there were savagely expelled. Now there are some people who cannot sleep because we have unified the city. And what have we done wrong? Have we chased the Arabs out of the city? No. What we have done is to clean it up, to bring in running water and electricity. They bombed our synagogues and profaned our cemeteries—and who cared in the United Nations? I hate to sound bitter, but we have decided for once and for all we will determine for ourselves just what we ourselves will consider just—whether or not certain people find that an acceptable notion. We demand the same rights as any other people in the world to exist."

On the Palestinian Arab refugees: ". . . We won the war in 1948. That was our first sin. The Arabs fled; we did not chase them out. We declared, *urbi et orbi*, that we were prepared to compensate financially for goods abandoned by the fleeing Arabs. Is Iraq ready to do the same for the Jews they expelled? Or Egypt? Or Morocco? Or Syria? Israel respected the resolution on the partition of 1947, and the Arab countries did not . . . I do not say that the refugees do not suffer, or that they do not constitute a humanitarian problem. But who created this problem? And why have they done nothing to resolve it?

"We were 600,000 Jews here when we began to receive the immigration of 100,000 persons each year. There were not enough roofs, or food, and we rationed eggs, tomatoes, shoes, everything. Of course, we received generous aid from Jews in other places. But what does that represent in comparison with the gold mine of royalties from Arab oil? And what, then, was the contribution to their own refugee problem of Kuwait, or of the Sudan? We welcomed and housed and fed our refugees from all over, and we integrated them into our society . . . Why have the Arabs not done the same for theirs?"

On anti-Semitism: "Many who speak of 'Zionists' are really thinking 'Jews.' The Soviets have always done that . . . This is revealing of a latent anti-Semitism. Well, we have lived with anti-Semitism for two thousand years; we know it in all its guises and all its masks. It comes wrapped in packages labeled justice, or humanism, but inside it is the same merchandise. And there are other people who are not anti-Semites but for whom the Jews can only be unfortunates, can only be objects of pity. They had pity for us before June 5, 1967—but we survived. What kind of Jews are we that we do not get killed, that we do not become objects of pity? There are people who just find it impossible to accept us as equals, people who just cannot accept us as neither angels nor devils, but just as men and women like all others. . . ."

ADMINISTRATION'S MARINE RESEARCH PROGRAM

Mr. GRIFFIN. Mr. President, on Sunday, the Vice President announced the establishment of a five-point program to improve and expand marine research.

As one who has applauded our efforts in space, I feel that they need to be matched by intensive study of the potential of our oceans and large inland lakes. The balanced proposal of the administration, which focuses attention on both the destructive and productive effects of man's use of his water resources, is to be commended.

Coming from a State surrounded on three sides by the Great Lakes, I am particularly pleased by the administration's specific emphasis on the pollution problem in the Great Lakes. These unique bodies of fresh water are particularly vulnerable to harmful exploitation. Unless special efforts are made to control and prevent pollution of these lakes, irreversible contamination is possible.

The pilot study of lake pollution, proposed by the National Council on Marine Resources, and the anti-pollution demonstration program for the Great Lakes, established by S. 7, are two important steps forward in the battle to save the Great Lakes.

Mr. President, I ask unanimous consent that the text of the Vice President's release and the details of the program released by the National Council on Marine Resources and Engineering Development be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

A RELEASE FROM THE OFFICE OF THE VICE PRESIDENT, WASHINGTON, D.C.

A five-point program to strengthen the Nation's marine science activities was announced today by Vice President Spiro T. Agnew, as Chairman of the National Council on Marine Resources and Engineering Development.

The Vice President reported five areas that the Administration has selected for immediate special emphasis in the next fiscal year.

These areas are:

Coastal Zone Management: A new Federal policy will be established to promote the rational development of coastal areas and the Great Lakes, with a grant program to aid States to plan and manage activities along the coast.

Establishment of Coastal Laboratories: Coastal marine laboratories will be established to accelerate environmental research needed for effective management of coastal activities.

Lake Restoration: A pilot technology study of lake pollution will be initiated to guide restoration of the Great Lakes.

International Decade of Ocean Exploration: The United States will propose a range of specific programs as its initial contribution to the International Decade of Ocean Exploration during the 1970s.

Artic Environmental Research: Ocean-related research will be accelerated on the interaction of man with the Artic environment.

The Vice President said that details of the program have been worked out with the approval of the White House.

Additional funding above current levels will be provided for implementing these programs. Primary responsibility for development of each program will be assigned to an appropriate Federal agency while studies of the Government's organization of marine science activities continue.

Selection of the five priority programs followed an intensive Government-wide review of urgent needs of the nation in relation to marine affairs. These particular needs cannot await the result of longer range studies, the Vice President said.

The study was requested by President Nixon in February following submission of the Report of the Commission on Marine Science, Engineering and Resources, *Our Nation and the Sea.*

The President's Advisory Council on Executive Organization, headed by Roy Ash, is now evaluating the Commission's recommendation to create a new National Oceanic and Atmospheric Agency. The Administration will also continue to evaluate other Commission recommendations, strengthen on-going programs, and seek improvement of Federal management of ocean programs. The President's task force on oceanography, headed by James H. Wakelin, Jr., will be of particular assistance in formulating the longer term goals of the national program.

The National Council on Marine Resources and Engineering Development was established at Congressional initiative by Public Law 89-454 to assist the President in the development and coordination of national marine science policies and programs. The Council membership is as follows:

Chairman: Spiro T. Agnew, the Vice President.

Members: William P. Rogers, the Secretary of State; John H. Chafee, the Secretary of the Navy; Walter J. Hickel, the Secretary of the Interior; Maurice H. Stans, the Secretary of Commerce; Robert H. Finch, the Secretary of Health, Education, and Welfare; John A. Volpe, the Secretary of Transportation; Glenn T. Seaborg, Chairman, Atomic Energy Commission; William D. McElroy, Director, National Science Foundation.

Observers: Lee A. DuBridge, Director, Office of Science and Technology; Robert P. Mayo, Director, Bureau of the Budget; Paul W. McCracken, Chairman, Council of Economic Advisors; Thomas O. Paine, Administrator, National Aeronautics and Space Administration; John A. Hannah, Administrator, Agency for International Development; S. Dillon Ripley, Secretary, Smithsonian Institution.

Executive Secretary: Edward Wenk, Jr.

[From the National Council on Marine Resources and Engineering Development, Oct. 19, 1969]

DETAILS OF FIVE-POINT INTERIM MARINE SCIENCE PROGRAM

1. COASTAL ZONE MANAGEMENT

Legislative proposals will be submitted to the Congress to establish a national policy for the development of coastal areas and to authorize Federal grants, with matching State contributions, that will encourage and facilitate the establishment of State management authorities. Such legislation will assist to insure the rapid coastal development does not destroy limited coastal land and water resources and that all interests in the coastal regions would be assured consideration—for port development, navigation, commercial fishing, mineral exploitation, recreation, conservation, industrial development, housing, power generation and waste disposal.

Grants are anticipated for (1) initial development by States of planning and regulatory mechanisms; and (2) operation of the State management systems that are developed. The latter grants would be made contingent on a State demonstrating a capability to prepare plans that provide for:

Balanced use of the coastal margin, both land and water, that considers viewpoints of all potential users;

Access to management-oriented research, including coastal ecology studies;

Regulatory authority as needed—such as zoning, easement, license, or permit arrangements—to insure that development is consistent with State plans;

Consideration of the interests of adjacent States;

Land acquisition and power of eminent domain as necessary for implementation of the plan; and

Review of proposed Federal, Federal-assisted, State and local projects to insure consistency with plans.

States have responsibility for management of coastal resources but have often lacked regulatory and management capabilities. They have been faced with a diversity of coastal jurisdictions and the absence of ecological information. This program should thus strengthen the States' capabilities, lessen the need for Federal intervention, and facilitate integration of planning, conservation, and development programs among diverse public and private interests.

2. ESTABLISHMENT OF COASTAL LABORATORIES

Steps will be taken toward establishment of coastal laboratories, supported by the Federal Government, to provide information on resource development, water quality, and environmental factors to assist State authorities and others in coastal management. Existing facilities will be strengthened and consolidated as necessary to provide capabilities to:

Develop a basic understanding and description of the regionally differentiated ecology of our 13,000-mile coastline;

Anticipate and assess the impact on the ecology of alternative land uses, of pollution, and of alterations to the land-water interfaces;

Operate coastal monitoring networks; and

Perform analyses needed for coastal management.

Establishment of these capabilities will be phased with the development of coastal management plans to foster State access to environmental data and research capabilities.

3. PILOT TECHNOLOGICAL STUDY OF LAKE RESTORATION

The feasibility of restoring the Great Lakes with technological as well as regulatory mechanisms will be determined by a pilot study of a lake of manageable size. Existing environmental technology and techniques will be tested, including pollution measuring devices, methods of artificial destratification by aeration, mixing and thermal upwelling techniques, thermal pollution control and enrichment, artificial bottom coatng, filtering, harvesting of living plants and animals, and restocking of fishery resources. The program will reinforce current investigations, and bring together additional competence from industry, academic institutions, and Federal laboratories.

4. INTERNATIONAL DECADE OF OCEAN EXPLORATION

Funding will be provided for the U.S. contribution to the International Decade of Ocean Exploration during the 1970s, proposed by the United States and endorsed by the UN General Assembly in December 1968. The United States will propose international emphasis on the following goals:

Preserve the ocean environment by accelerating scientific observations of the natural state of the ocean and its interactions with the coastal margin—to provide a basis for (a) assessing and predicting man-induced and natural modifications of the character of the oceans; (b) identifying damaging or irreversible effects of waste disposal at sea; and (c) comprehending the interaction of various levels of marine life to prevent depletion or extinction of valuable species as a result of man's activities.

Improve environmental forecasting to reduce hazards to life and property and permit more efficient use of marine resources—by improving physical and mathematical models of the ocean and atmosphere which will provide the basis for increased accuracy, timeliness, and geographic precision of environmental forecasts.

Expand seabed assessment activities to permit better management—domestically and internationally—of ocean mineral exploration and exploitation by acquiring needed knowledge of seabed topography, structure, physical and dynamic properties, and resource potential;

Develop an ocean monitoring system to facilitate prediction of oceanographic and atmospheric conditions—through design and deployment of oceanographic data buoys and other remote sensing platforms;

Improve worldwide data exchange through modernizing and standardizing national and international marine data collection, processing, and distribution;

Accelerate Decade planning to increase opportunities for international sharing of responsibilities and costs for ocean exploration, and to assure better use of limited exploration resources.

This U.S. contribution to an expanded program of intergovernmental cooperation reflects four recent developments:

(1) Increased population concentration along the coasts of the United States and other countries, with attendant threats of harmful degradation of the ocean environment, and increasing demands on the coastal margins and marine resources.

(2) Evolution of technology that is rapidly opening new ocean frontiers.

(3) Recent scientific advances that can improve environmental forecasts if better ocean data is available.

(4) Sharply increasing interests by 100 coastal nations in extracting benefits from marine activities.

The Decade will accelerate needed understanding of the ocean—permitting nations individually to plan investments and collectively to develop arrangements for preserving the ocean environment and managing common ocean resources.

The global character of the oceans and the scope of work to be done make international cost-sharing and data exchange especially attractive. International cooperation in marine affairs is expected to facilitate communication with developing nations, with the Soviet Union, and with others.

The U.S. proposals are compatible with the framework of the expanded and long-term international program of ocean exploration recently developed by UNESCO's Intergovernmental Oceanographic Commission. The extent and nature of the U.S. contribution will depend on the contribution of other nations participating in this program.

5. ARCTIC ENVIRONMENTAL RESEARCH

Arctic research activities will be intensified, both to permit fuller utilization of this rapidly developing area and to insure that such activities do not inadvertently degrade the Arctic environment.

The program will be directed to (1) the polar icepack including its impact on transportation and global weather and climate; (2) the polar magnetic field and its effects on underlying the Arctic lands and polar seas both as potential mineral sites and as hazards to construction and resource development; (4) balance of the Arctic eco-system; (5) the presence of permafrost; and (6) slow degradation of liquid and solid wastes under Arctic conditions. Behavior and physiology of man in this environment also will receive increased attention. Initial emphasis will be on strengthening and broadening Arctic research capabilities. Consideration will also be directed to formulating an overall policy framework for Arctic-related activities.

FRENCH COMMEMORATE PRESIDENT EISENHOWER IN SILVER

Mr. BIBLE. Mr. President, just a week ago today, this body took deliberate and responsible action when it passed Senate Joint Resolution 158 by a large majority and sent the measure to the House for its consideration.

Senate Joint Resolution 158 provided for the minting of a 40-percent silver-clad dollar bearing the likeness of the late President of the United States, Dwight D. Eisenhower.

At the time of the debate, I stated it was my belief that a silver coin would be revered and cherished by our citizens. I also pointed out the continued weekly sales of Treasury silver by the General Services Administration was bringing an average price of $1.87 per ounce to the Treasury.

It was my belief, and still is, that the taxpayers should receive full value for the surplus silver held in our Treasury. A 40-percent silver commemorative dollar will see the U.S. Treasury receiving more than $3 per ounce for its remaining stocks of silver and at the same time will permit the Nation to commemorate properly one of its outstanding citizens.

As Senators are aware, the House substituted its own language in Senate Joint Resolution 158, which included the minting of a silverless dollar. The joint resolution has been sent back to the Senate for further consideration.

Since the passage of the Senate bill, my mail has reflected complete agreement with the Senate's position. In fact, just yesterday I received a thoughtful letter from a Nevada friend and constituent, Mrs. Victor Cottino, of Pioche, Nev., which reads as follows:

I have read with interest and listened to over the radio and television the debate over whether to have a silver content in a dollar honoring former President Eisenhower. It seems a little odd to me that France could strike a coin honoring President Eisenhower, the Kennedy brothers and

Martin Luther King and offer it for sale in the United States when it is composed of 99.99% silver, and then our own government argues about putting a silver content of 40% in a dollar. Please find enclosed a page from the Sears Roebuck Christmas catalog which lists the commemorative medals for sale. I trust that you are not in favor of this copper clad dollar which is being proposed.

I agree wholeheartedly with my constituent. It makes little sense to me that another nation, such as France, can mint silver commemorative coins of 99.99 percent silver and sell these coins to our citizens through large private business outlets for $10 each, when our Nation is in fact making silver available to any nation at the ridiculously low price of $1.87 per ounce.

I have commented many times that our foreign friends would purchase Treasury silver stocks and sell the silver back to our citizens at an increased price when silver was in short supply.

As the distinguished Senator from Utah (Mr. Moss) stated in the debate last week, it is estimated that 200 million ounces of Treasury silver are stored in England and on the Continent.

This silver which we have sold at bargain prices will be coming back to the United States just as the silver commemorative coins now produced at the French Mint are now being offered at $10 each in this Nation.

I hope that Senators will not accede to the substitute language as agreed upon by the House Members when Senate Joint Resolution 158 is again before the Senate.

COLLEGE STUDENT AT 84

Mr. SYMINGTON. Mr. President, an interesting news article about a longtime friend, Perry W. Porter, was published in the Unionville, Mo., Republican of September 24. I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE IS NEVER TOO "YOUNG" TO LEARN

Putnam county could have the distinction of having the oldest student enrolled at N.E. Missouri State at Kirksville in the person of Mr. Perry W. Porter, local insurance and income tax man.

Mr. Porter enrolled in a 9-week Income Tax course being offered at the college on Monday evenings of each week. He will receive one hour of college credit when completed. Perry may be the oldest person on the campus, but we will make a wee-wager that he has the sharpest pencil on the campus when it comes to figures.

Mr. SYMINGTON. Mr. President, Mr. Porter celebrated his 84th birthday last February 23, and his many activities in the insurance business, helping friends and neighbors and clients for many years in the preparation of their income tax returns, and in many civic good works, including responsibility for leading the singing every week for the Unionville Rotary Club, are all evidence that one is only as old as he feels. The fact that Mr. Porter, in addition to his other activities, has now gone back to college proves that he is feeling mighty young.

Mr. President, I would hope that our colleges throughout the country will continue to offer courses of interest to our "young adults"—whether they be 24 or 84.

LOS ANGELES URGES ENACTMENT OF S. 2625, THE URBAN AND RURAL EDUCATION ACT

Mr. MURPHY. Mr. President, from my city of Los Angeles, I have received an endorsement of the Urban and Rural Education Act, which I introduced on July 15, in the form of a letter from Superintendent of Schools Jack Crowther. He has worked with me on various legislative proposals, and I am very grateful for his help and support.

I ask unanimous consent that Superintendent Crowther's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LOS ANGELES CITY BOARD OF EDUCATION,
Los Angeles, Calif., August 15, 1969.

HON. GEORGE MURPHY,
Senator, State of California, U.S. Senate, Senate Office Building, Washington, D.C.

DEAR GEORGE: Thank you for your letter of July 22, 1969 and the accompanying material on your Urban and Rural Education Act of 1969. You may count on our enthusiastic support of this measure.

If it should be your desire to have us appear to testify in support of the bill, we would appreciate it if your office could inform us as early as possible in advance so that we can be adequately prepared both in terms of available staff and supportive materials.

In light of the fact that the California Legislature apparently intends not only to limit additional state school aid to what approximates a cost-of-living adjustment and to restore the ceilings on local property taxes for school support, your bill offers the only hope we have at this time of obtaining additional funds to enable this school district to deal with the mounting educational problems that are so well described in your excellent statement.

Please accept my sincere thanks and appreciation for sponsoring this much needed legislation. We stand ready to assist you in any way we can to obtain congressional approval.

With best wishes, I am,
Sincerely,

JACK P. CROWTHER,
Superintendent of Schools.

THE IMBALANCE OF POWERS: CAN CONGRESS SURVIVE?—ADDRESS BY SENATOR HARTKE

Mr. CRANSTON. Mr. President, the distinguished senior Senator from Indiana (Mr. HARTKE) recently addressed the Commonwealth Club of San Francisco about "the vast agenda of unfinished business" our Nation faces in domestic and foreign affairs. With the same eloquence and insights we in the Senate are so frequently privileged to hear, Senator HARTKE told my fellow Californians that we must "meet head on the crises of our Nation, in all their difficult ramifications, and to do so with the courage to abandon wrong causes and obsolete policies."

Pointing out the imbalance of powers between the executive and legislative branches of Government, Senator HARTKE predicted:

If the trend towards executive centralization continues, there is little doubt that the wellsprings of innovation will dry up in Congress just as they very nearly have in the States.

So that all of us may have the opportunity to read the speech, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE IMBALANCE OF POWERS: CAN CONGRESS SURVIVE?

(Remarks by Senator VANCE HARTKE before the Commonwealth Club of California, Sheraton Palace Hotel, San Francisco, Calif., October 17, 1969)

It was with a great deal of pleasure that I received the invitation to address the Commonwealth Club.

Aside from the fact that this is a forum renowned as a marketplace of ideas that sooner or later affect national policy. I greet any opportunity to revisit San Francisco with special joy.

Long before the Harris poll revealed that most people prefer it to other cities, I have had San Francisco high on my own list of preferences—although as a gentleman from Indiana, I can think of at least one place more to the taste of an unreconstructed Hoosier. Your bay area, it is true, stirs with a certain colorful vitality; but it is also true that in my State, along the banks of the Wabash, one may still enjoy the harvest of a quiet eye.

I first went to the Senate in 1958, a young man from Evansville, with an inherited vision of what our country might be. Those were the last of the Eisenhower years—those years when the lamp of illusion shed its benign light over the Nation.

In retrospect, it is clear to me that even before I went to the Senate, the forces that have brought us to our present crisis were already churning despite the rhetoric to the contrary. The races were in conflict; the cities were in deep trouble; there was violence in the streets; there was discontent among the young; and the seeds of the Vietnam war had already been planted. Indeed, all the harsh realities of the last third of the 20th century were assaulting the assumptions we lived by.

We needed then, as we do now, a declaration of a new political truth—some bold, new effort at social invention, through which the American people might adapt itself to the sweeping technological scientific, social, and political changes that now challenge us—and the world.

I know that no one can confront the problems of national policy without recognizing their enormous complexity; but I also know that to deny the complexity of our problems is an abdication of both political responsibility and power. There are no simple answers to big problems. But the big problems are here, and they are getting bigger, and more complex, and finally more dangerous. A President may deny them by seeing only what he believes, or like the old judge, render a decision on the premise that his conclusion proves the facts. The human condition, however, is real, and the facts speak for themselves.

When there is a broad divergence between national policy and the facts of life, the door is open to widespread discontent. Thus, there is now abroad in the land, a general notion, mostly articulated by the young, that what we do—and try to do—in and out of Washington is irrelevant to our needs; and in all truth there is very little evidence that our national policies reveal any fundamental awareness of the world around us.

The facts speak for themselves, and they define a totally new set of circumstances,

without reference to anything in our past. And they demand a totally new set of policies.

The fact of nuclear arms has made obsolete the historic forms of diplomacy, and has created throughout the world a brooding sense of fear.

It is a fact that the population of the earth will double by the end of this century, and this has raised the alarming prospect of widespread death through mass starvation.

It is a fact that there are now over 160 sovereign nations on this planet, all eager for power and influence. And it is also a fact that the have nations are mostly white and the have-not nations mostly non-white. And the question is asked: Will this not lead to a global racial war?

It is a fact that the genius of America has produced a miraculous technology, capable of supplying an ever-increasing abundance of goods and services. But it is also a fact that this same technology despoils our environment, dirties our waters, and ploughs filth into the air. And the question is legitimately asked: At what point will the health of the entire nation be endangered.

Here we are, a nation of metropolitan man, concentrated in great urban areas, and year after year we watch the erosion of our cities—we watch them decal and become more unlivable and more unworkable. And it is a fact that we do not have a national policy and a national commitment to an overall urban renewal.

Instead of new policies, we have a vast agenda of unfinished business in international affairs and in domestic programs, all of which bear directly on the fate and future of our nation. But we are wasting ourselves in the Vietnam war, which we should have avoided in the first place, and which we should now leave entirely in the hands of the Vietnamese, to do with what they will, but not with our young men, and not with our treasure.

The time is now long overdue when we must get on with the larger business at hand, which is to meet head-on the crisis of our nation, in all its difficult ramifications, and to do so with the courage to abandon wrong causes and obsolete policies.

In an address to the Congress of the United States, in December 1862, Abraham Lincoln said:

"Fellow citizens, we cannot escape history. We will be remembered in spite of ourselves . . . the fiery trial through which we pass will light us down in honor or dishonor to the last generation . . .

"The dogmas of the quiet past are inadequate for the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion.

"We must think anew, we must act anew, we must disenthrall ourselves."

Lincoln's call in 1862 has a real and sudden applicability to our own time, for we too must shed the dogmas of another day, and act anew with a belief that our rational faculties can join in a common cause.

We have more affluence than was dreamed possible. Our technology in a sense, is miraculous. We opened the door to the age of Apollo, and brought the moon and the planets directly into the orbit of human experience. Fifty million of our children go to school and seven million of them go to college. Many Americans are poor, but most are not. There are many who are ill-housed, ill-clothed and ill-fed; but most are not.

Yet no recitation of these achievements now suffice to reassure Americans that they are safe and secure and on the way to a better life.

The Vietnam war certainly dominates the consciousness of the country, and raises grave doubts not only about the credibility of the Government, but also, and more importantly, about some widely assumed postures of the United States. We are not, for example, invincible as we once thought. We have the most powerful military establishment in the world, but we cannot win a war against a little people with only an ounce of our resources. We pretend to be the exporter of democracy, but we have no reluctance to support with arms and money corrupt and dictatorial governments. These moral contradictions finally take their toll, for when the gap between appearance and reality becomes very obvious, citizens everywhere find their faith torn. When they are young, they desert our institutions, and when they are middle-aged and old, they turn to despair.

But over and above the demoralizing effects of the war and our foreign policy, there is mounting discontent and now a considerable doubt as to whether or not successive administrations in Washington have had the wisdom and statesmanship to formulate policies and programs that really relate to our problems.

Consider the contradiction that our so-called longest period of sustained prosperity is in fact something of a delusion, since the vast majority of American people are now so overburdened with the high cost of living that the present administration is faced with the real prospect of a taxpayer's revolt.

Or consider our fidelity to the economic policies of the past, which we cling to in the face of the world's declining liquidity and the mounting pressures for radical changes that will unlock the channels of world trade.

Or assess the effect on our people when they hear that Lake Erie has become a swamp, or that air pollution may cause emphysema in epidemic proportions, or that nearly 60,000 people will be killed on our highways this year, or that in the richest nation in the world 12% of the population live in abject poverty, or that our wildlife is being made extinct. And while the people may not express their concerns in loud and angry rebuke to their Government, they are perplexed and anguished by all this. For we have been brought up to be a generous people, with a reverence for life, but all around us we see that life is held in some contempt.

And we can go on to recall all the failures and frailties of our national policies. We can talk about the lost opportunities for peace, and the fallacies of our programs for our racial minorities, and the insanity of escalating our nuclear capabilities, but finally we must consider the role of political leadership. For what that is and how it functions is the ultimate determinant of what we are and where we are going.

It seems to me that for too long now we have put our faith in the idea of a leader—the President of the United States. We have permitted ourselves to believe that leadership must necessarily reside in this one man and whatever palace guard of advisers he chooses to have around him.

Surely no notion runs more directly counter to the essential spirit of the American political system than this. As every civics student knows, the founding fathers dispersed power throughout the system both horizontally and vertically: Horizontally through separation of powers at the national level and vertically between the central government and the States. They did this not only because they wisely feared the concentration of powers at a single source, but also—and more subtly—because they recognized that this new nation's very survival would depend on its ability to innovate in the face of new challenges. And innovation, they realized, could never be safely left to a single locus of government.

So let me now offer a preliminary answer to the question posed in the title of my remarks, "Can Congress Survive?" The answer is, yes: It can because it must.

I think it is perfectly clear that no great and diverse society can hazard its existence on the judgment of any one man and his handpicked advisers. Confronted with life and death problems of such terrifying complexity as those we face today, the judgment of a solitary leader is simply not good enough. And let me make it clear that I am not talking only about Richard Nixon or Lyndon Johnson, but about John Kennedy and Harry Truman, and Franklin Roosevelt as well.

Complex problems demand complex judgments—the kind that can only come from the dialectical clash of divergent ideas.

That is why the Senate is such an admirable and necessary institution. Composed as it is of 100 generally able men and women of sharply different backgrounds and political perceptions, it offers the opportunity at least for subjecting every proposed policy to a truly rigorous examination. And because it never denies a Member the chance to be heard on questions of concern to him, it maximizes the likelihood that policy choices will be fully and carefully explored.

This, it seems to me, is the genius of the Senate as an institution. And it serves the Nation best when it is true to its genius—as in the great debate this year on national commitments and on military procurement. It serves the Nation far less well when it is false to itself—as in the Gulf of Tonkin Resolution of 1964 when we lost sight of our own constitutional responsibilities in our eagerness to allow the President to inflate his.

By the same token, if policy judgments on complex problems cannot safely be left to the exclusive province of the Executive, neither can policy initiatives. A homelier way to put the same point is to say that we can never have enough good ideas.

Yet that is precisely the point that we ignore when we surrender to the doctrine—so tirelessly put about these days, especially by liberals—that the Presidency should be the source and fount of policy initiatives in our system. So pervasive has this belief become within the past 30 years or so, that even a great many of my colleagues seem now to view bold new ideas originating in Congress as somehow suspect until they can win the administration's stamp of approval. And what is true of Members of Congress is thrice-true of the news media people, who do so much to shape the public consciousness.

But valuable policy initiatives do continue to originate in Congress. And it would take a very severe wrenching of facts to argue that these are somehow intrinsically less worthy of attention that those that originate in the executive, which, after all, is composed at its highest levels of a variety of former governors, businessmen, Wall Street lawyers, political organizers, and college professors—many of whom have had little or no practical experience in dealing with the affairs of their office or agency.

If you will forgive me a personal reference, I should like to give you an example from my own legislative record of the kind of new effort at social invention which I mentioned earlier.

On August 7th of this year I introduced Senate Joint Resolution 145 to establish a Joint Committee of Congress on National Goals. Its purpose would be to identify specific—I emphasize the "specific"—National Goals and the means to achieve them by the bicentennial year of 1976. The sort of goal I suggested in my speech of introduction included the elimination of poverty, the cleansing of our air and waters, making the streets of our cities safe to walk upon, and providing decent housing, education, and transportation for all Americans.

Are these goals too visionary, too impractical? I am convinced that they are not. I argued in my speech that the success of Apollo 11—the greatest technological feat in the history of mankind—demonstrated beyond challenge that we have both the technology and the resources to achieve any materially feasible goal. All we have so far lacked for a coordinated, successful attack on the domestic problems that blight our

society is the will. And if you doubt that we really do have the resources for so massive an assault on our ills, let me point out that the military part alone of our Vietnam folly has since 1965 cost us over one hundred and six billion dollars.

In essence, then, my proposal would set in motion the institutional machinery to devise and launch the first coordinated, concentrated assault on the besetting ills of our society that we have ever attempted. That proposal has now been endorsed by such different but influential sources as Walter Cronkite, Parade Magazine, and President Nixon. Given this kind of support, I am hopeful that the resolution will now begin to make some proposals through the legislative mill.

The central point, however, is that this initiative, which I believe to be sound and I hope will prove fruitful, originated with a member of the Senate. If it is a more ambitious proposal than most, it is by no means more imaginative or creative than many others that have been put forward in Congress. But if the trend towards executive centralization continues, there is little doubt that the wellsprings of innovation will dry up in Congress just as they very nearly have in the States—which, let me remind you, only a few decades ago were often vital laboratories of social and political experimentation.

I said a few minutes ago that Congress will survive because it must. Let me confess that I have more confidence in the "must" than in the "will". An institution that has lost its constitutional vitality is all too likely to lose the caliber of men who alone can give it force and meaning in the total government context.

The challenges we face today are more terrifying than any we have known since the Civil War. We desperately need every ounce of judgment and creative initiative we can get. And Congress, I have argued, is a superb repository of both judgment and initiative.

There is one last point to be made in this connection. The American mission is unique in all history. It is, in James Madison's words, to prove the impossible: That a multi-racial, multi-ethnic society can make peace with itself, and rise finally to that level of life which is the vision of all mankind.

This proposition is now being tested throughout the land and in the deliberations of government. And in this struggle for a new life, it is the Congress of the United States that is the ultimate custodian of the loftiest American ideals.

Like all great efforts at creation, there is pain and anguish and sometimes violence; but these should be viewed as a prelude to success. For we will succeed, even if the price is high, so long as we preserve the sovereign right of the people to speak and act and create through their elected representatives.

THE STERLING HEIGHTS CLINTON RIVER CLEANUP

Mr. GRIFFIN. Mr. President, at a time of increasing need for initiative at local levels, it is especially heartening to see the successful results of a well-organized community project.

Recently, the town of Sterling Heights, Mich., received national attention, including a congratulatory telegram from President Nixon, for its efforts in cleaning up the nearby Clinton River.

In just 2 days, under the leadership of the Sterling Heights Clinton River Cleanup Committee and with the aid of some 2,000 residents, approximately 12,000 tons of debris were hauled from a 10-mile stretch of the river.

The benefits inuring from this project are not limited solely to environmental aspects. The cost savings achieved through the volunteer effort can be seen merely by examining the probable rental cost of the 200 pieces of heavy equipment which were donated. The intangible benefits in terms of community pride and individual participation are immeasurable.

This significant accomplishment should help to restore faith in the potential and resourcefulness of local government. The citizens of Sterling Heights are to be commended for setting an example to the Nation of responsible community action.

I ask unanimous consent that an article published in the October issue of the Rotarian describing the Clinton River cleanup, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLEANUP ON THE CLINTON

(By Frank S. Fayssoux)

"Polluted—Unsafe for Swimming."

The sign, white lettering on dark stained wood, juts up from the weed-strewn banks of the Clinton River as it flows through Sterling Heights, Michigan, just 14 miles from downtown Detroit. A glance at the river and a sniff of its odor makes the sign unnecessary. In a word, the river stinks. In a phrase, it is an eyesore. This is because, to borrow a remark from the former U.S. President Lyndon B. Johnson, it has grown "heavier with the debris of our spectacular civilization": junked cars, old tires, oil drums, baby carriages, washing machines, beer cans, and hundreds of tons of other kinds of rubbish.

"A river is more than an amenity—it is a treasure," said former U.S. Justice Oliver Wendell Holmes. The Clinton, then, has become a badly tarnished treasure: The dark, dirty waters flow between refuse-strewn banks and in spots, obstructed by debris, slow into still pools streaked with heavy green slime. The odoriferous, cluttered Clinton River, to put it bluntly, is bankrupt.

This, at least, was the story until the weekend of August 16 when a project spearheaded by the Rotary Club of Sterling Heights launched a community-wide cleanup campaign. Under gunmetal gray skies and occasional blue, in driving rain and intermittent sunshine, some 2,000 people from Sterling Heights and the surrounding area worked for two days from dawn to dusk cleaning up their burdened river.

It didn't all happen overnight. These things never do. It happened because of good planning, strong leadership, and lots of cooperation among all involved. In fact, the logistics of the clean-up smacked of a well-planned military operation. Much of the planning and leadership was provided a big, ruddy-complexioned salesman of school supplies named Al Martin. A Rotarian and city councilman, Al is chairman-president of the Sterling Heights Clinton River Clean-up Committee.

"Why don't we do something about the river?" Al asked Ray Filipchuk, President of the Sterling Heights Rotary Club and director of public services for the city, soon after the Club was chartered on May 9, 1969.

"How are we going to do it?" Ray responded.

This question led to other consultations and conversations within the Club. Barely one week after its founding, the Club agreed to form a Spearhead Committee and embark on a community project to clean up the Clinton.

With headwaters in Michigan's Oakland County some 20 miles west of Pontiac, the Clinton River flows toward Lake St. Clair in three branches: the Main, Middle, and North. The entire river is not yet polluted and there is still good fishing along the North Branch. The Main Branch, which flows through Sterling Heights, was once an angler's dream which pollution and debris turned into a nightmare.

Although the river has been a problem for area residents for years, it has only been a *city* problem since July 1, 1968. An unincorporated township up until then, Sterling Heights on this date officially came into being and automatically became the second largest city in area (36 square miles) in Michigan. Population increased from 14,000 in 1960 to 47,000 in 1968, and planners now predict a population of 150,000 by 1980.

In the current tradition of a swing toward youth, the young city and even younger Rotary Club combined forces to combat the polluted river which too many citizens used as a garbage dump. With Club members serving as chairmen or co-chairmen on all of the 12 subcommittees, the Clinton River Cleanup Committee received pledges of support from other civic and service clubs, sportsmen's organizations, local and county government agencies, and individual citizens and businessmen.

"We believe this grass roots effort has great significance for the entire U.S.A., because citizen volunteers are doing something for the community instead of waiting to see what government is going to do about the Clinton River problem," Chairman Al Martin wrote in a letter the committee sent out seeking support.

The problem of waiting to get the job done "through regular channels," according to committee members, is the large number of overlapping governmental agencies which become involved. These include 14 to 20 different city governments, a number of county drain commissions, and the U.S. Army Corps of Engineers. A clean-up campaign was recently completed along eight miles of the Main Branch's downstream area near the mouth of the river. Another clean-up is scheduled "through channels" along another seven mile stretch of the river. This project will cost $17 million and take five years. Rather than wait the five or six years committee members think it would take the authorities to reach their stretch of the river, the Clinton River Clean-Up Committee took the plunge itself.

And so in the first gray dawn of Saturday morning, August 16, volunteers began arriving—men, women, and children ready to go down to the water (and into it) to seize and carry away with their own hands the floating flotsam which had collected through years of neglect. Soon after 6 A.M. the first full bus load of volunteers (a group of teenagers) were on their way to assigned work areas.

Along the ten miles of the Clinton to be cleaned were 24 work areas, 12 on each side of the river. The entire effort was directed from main headquarters, a trailer at Dodge Park No. 8 across the street from the Sterling Heights municipal building. Communications were maintained between all work sections by 30 mobile radio units and 30 walkie-talkies provided by the Sterling-Utica-Shelby REACT (Radio Emergency Associated Citizens Team).

In the early morning mist, heavy machinery (some 200 pieces of it) churned into operation. It was placed in position along the river Friday on roads and trails previously carved out for this purpose. Canoes, flat-bottom boats, and an amphibious vehicle plied the river's surface, while bulldozers, cranes, cherry pickers, and trucks worked in unison along the water's edge. Logs and other debris were dredged up and hauled away.

During the months of June and July, the Sterling Heights area was steadily pelted with rain. The forecast for this weekend of work was for good weather. Chairman Al and the committee had counted on it. But the

gray skies at daybreak were a bad sign. Around 9 A.M., the first rain began to fall—slow but steady.

Soon it was a downpour. Wet clothes stuck to wetter skin and the roads became trails of mire. Some of the heavy equipment bogged down in the deepening mud. Instead of drenching the workers' spirits, however, the rain seemed to strike a spark and all the "river rats" redoubled their efforts—slogging about with gusto and good humor.

"These operators of mine are real prima donnas and usually pack up and go home at the first sign of rain on a regular job," said one of the contractors who donated heavy equipment for the clean-up. "But I'm real proud of them out here. They're donating their own time and all of them are working harder than ever right through the rain."

The Clinton River clean-up spirit seemed to infect everyone. Women ferried food from headquarters to the work sections in station wagons. Some hustled hot coffee on foot. Children of all ages were busy in the river or around headquarters. On Sunday, people who weren't involved with the clean-up held picnics around the headquarters area in Dodge Park. But this didn't slow down the clean-up crews for one minute. They knew if the river was to be cleaned up, someone had to do the work.

Saturday night, workers in many of the sections along the river begged for flood lights so they could continue. The lights weren't available so everyone trudged home, tired but contented. It rained during the night, and Sunday dawned gray as a battleship. However, except for some light misting, the rains never came and sometime during the afternoon the sun actually flashed a smile or two through clouds. Volunteers showed up in droves again and most of the bogged down equipment was freed from the mud.

"We're actually on schedule because of the dedication and determination of these people working out here," Al said at headquarters Sunday morning. "We lost very little time because of the rain."

Ingenuity was the order of the day. Some kids assigned to cleaning up small debris from the river used an Irish setter to haul the stuff from midstream to the bank where they could pick it up. The dog did a good job, but he did have trouble trying to pick up flat whisky bottles.

Safety was stressed at the outset and it paid off. The first aid tent treated mostly minor complaints, including scratches, bruises, a case of poison ivy, and a finger lacerated by a pop can.

By Sunday night, the hard-working crews completed 80 percent of the Clinton River clean-up project. Some 12,000 tons of debris and junk (more than 400 truck loads) was hauled off to proper dumping grounds. The fired-up volunteers, not contented with an *almost* finished project, voted to return the following Saturday and complete the remainder of the job.

Labor, equipment, food, fuel, and many other items were donated, but the two-day clean-up campaign cost some $10,000 in cold, hard cash—most of it contributed by local citizens, businessmen, and industry.

"This project would probably cost more than a million dollars if it had been undertaken by governmental agencies," Al says. "In figuring such costs, there are other intangible values involved. For instance, we plan to open the river as a fine canoe facility which should bring tourists into the area. We also hope to develop hiking and nature trails along the flood plain."

The Sterling Heights Clinton River Clean-up Committee has been incorporated for a three-year period so it may continue to encourage maintenance of the river and involve other adjoining communities in similar projects.

"We also hope to raise $5,000 so that we may donate it to the city for recreational facilities along the river," says Al.

With Lake Erie lying "dead" from pollution some miles beyond the city limits of Sterling Heights and the problem of water contamination continuing to proliferate around the world, the Clinton River clean-up takes on added significance. It shows that *something* can be done at the "grass roots" level—without waiting for governments (whether they be city, state, or national) to untangle their skein of red tape and finally act.

It shows, too, that a properly aroused Rotary Club can provide the impetus for community action. As the Sterling Heights Club "spearheaded" the Clinton River clean-up project, so have other Clubs provided the needed action for other conservation projects:

The Rotary Club of Lincoln, Nebraska, promoted organization of the Salt-Wahoo Watershed Association project. This involved some 5,200 individual farms in a complete program of water conservation, flood abatement, erosion control, and recreational development of the area.

The Chagrin Valley, Ohio, Club originated a similar watershed conservancy district embracing 11 communities and 260 square miles.

Other Rotary Clubs as far separated as Horse Cave, Kentucky; Howray, India; and Yokote, Japan, are interesting themselves in their water problems.

Along the Clinton River in Sterling Heights, most of the job the clean-up committee cut out for itself is completed. The river is still polluted (this is a problem that will have to be attacked at another source), but now most of the debris obstructing the river is gone. Perhaps canoeing will become commonplace on the Clinton once again, as it was some 30 years ago. Whatever work remains to be done, Al Martin and the Clinton River Clean-up Committee remain around to help do it.

If, as Justice Holmes said, "A river is more than an amenity—it is a treasure," then the people who labored long and hard along this particular river have helped restore the legacy of the Clinton's treasure. For this, the ultimate "thanks for a job well done" will come from their children.

J. A. TERRY, ROANOKE, ALA., BLACK BUSINESSMAN OF THE YEAR

Mr. ALLEN. Mr. President, I invite the Senate's attention to an event that will take place in Roanoke, Ala., on Wednesday, October 29. On that day the local chamber of commerce will hold a luncheon to honor J. A. Terry, a lifelong resident of the community, who in just 6 years has built a family sewing operation into a million-dollar-a-year industry that now employs more than 60 persons.

Mr. Terry typifies the Horatio Alger hero who makes boyhood dreams come true through the sweat of his own brow. His success is also a reminder that the American family unit is still a powerful force when it works together to meet a common dream.

Mr. Terry was educated in his local high school and trade school and then worked for a number of years for the Air Force where he became expert in sewing operations.

His dream was to enter the garment business. In 1963, with only small savings but great ambitions, he started the Terry Manufacturing Co. in his hometown. Because of his high character and good reputation, he gained financial assistance from local lending institutions and Small Business Administration.

He trained his own employees, drawing them from the ranks of the unemployed, those on welfare or from those working as domestics. He started with five sewing machines in a small wooden building.

Today, the Terry Manufacturing Co. operates in a modern 16,000 square foot plant where more than 60 employees produce clothing valued at more than $1 million wholesale per year.

Mr. President, this is truly a remarkable success story to tell in an age when so many left leaners are saying such success is not possible. I take a pardonable pride in this story because it is taking place in a small city in a rural area of a southern State, my home State of Alabama.

When he was asked why he decided to start his business in Roanoke, Ala., Mr. Terry, who is a Negro said:

> We wanted to show that black people can promote themselves; that they can be an asset to the town, to the country, to the economy; we wanted to do something to improve conditions rather than running away from those conditions.

Mr. Terry has been named "Black Businessman of the Year" by the National Association of Market Developers which is joining the chamber of commerce in sponsoring the luncheon on October 29.

Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Birmingham News of October 15 and a fact sheet relating to the Terry Manufacturing Co.'s history and telling some of its plans for the future.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Birmingham (Ala.) News, Oct. 15, 1959]

ROANOKE WILL HONOR NEGRO BUSINESSMAN

ROANOKE, ALA.—J. A. Terry, a Negro who earned the respect of the whites in this eastern Alabama community by building a million-dollar garment-manufacturing business from a shoestring says he wanted to show that black people can be an asset.

"We wanted to show that black people can promote themselves; that they can be an asset to the town, to the county, to the economy," the 55-year-old Terry said. "We wanted to help build something for ourselves."

Recognition of Terry's efforts comes Oct. 29, when the Chamber of Commerce will honor him at a luncheon. It may be the first time in the rural South that an all-white Chamber of Commerce has paid such a tribute to a Negro.

Terry is proud of the honor. "We've worked hard to get where we are today," he said in an interview Tuesday. "We'll have to work even harder to show people that all the nice things they're saying about us are justified."

When Terry says "we," he means his employees, himself and his family, which includes his wife and three sons who have worked closely with him since the beginning. "Without the unity of this family, we could not possibly have come this far," he said.

Terry, a native of Roanoke, received his education in high school and trade schools. He then learned and supervised practically every type of sewing operation while working for the federal government at Wright-Patterson Air Base experimental station for seven years in the 1940s.

He decided to enter the garment business and saved every penny he could. Little help was available when he started Terry Manufacturing Co. in 1963, but he picked up the

support of banks in Roanoke and nearby Wadley and the Small Business Administration along the way.

He started with five power sewing machines, housed in a small frame building and began manufacturing garments, training new employes as he expanded. Most of these employes were either unemployed, on welfare, or employed as domestic earning $10 to $15 per week.

Today he employs more than 60 persons, is housed in a new 16,000-square-foot plant and wholesales more than $1 million worth of clothing a year.

He said he thought about leaving his home to seek greener pastures but rejected the thought. "The idea was that we should do something with what we had, do something to improve conditions rather than running away from those conditions," he said.

Many Negroes were leaving this Randolph County town of 6,000 in 1963 in search of jobs.

Terry hopes to increase employment to about 100 persons.

Most of his sales are to wholesalers, but he is trying to develop retail outlets. He said this prospect "looks pretty good."

One of his products is Afro-style garments for men and women. Individuals and small shops are being recruited to sell the Afro garments on and near the nation's black college campuses.

"This is just in the beginning stage," he said. He added the white community has shown no adverse reaction to the garments' manufacture.

In fact, the white community thinks he's doing an outstanding job.

"He's doing something for his race, instead of inciting them to riot," said J. C. Washington, manager of the local Chamber of Commerce.

Terry, named "Black Businessman of the Year" by the National Association of Market Developers which is jointly sponsoring the luncheon to be held in the National Guard Armory, is looking forward to Oct. 29.

"It's rewarding to know that at least you've overcome many things," he said. "It's gratifying to find out that someone else is concerned with what we're trying to do."

FACT SHEET OF TERRY MANUFACTUING CO., ROANOKE, ALA.

I. BACKGROUND

In early 1963 Jesse A. Terry began the long, hard struggle to implement the idea which he formulated in his mind many years earlier. He put together every penny that he had saved or that he could earn in his successful upholstery business in order to buy sewing machines and pay wages to the ladies who he began to train as power machine operators. While his upholstery shop was earning a good living for himself and his family, J. A. Terry had a deep belief that the skills which he had learned could be used to provide employment for a larger number of his people, and at the same time to build a potentially profitable business. Having learned and supervised practically every type of sewing operation while employed by the Federal Government at Wright-Patterson Air Base experimental station during the 1940's, the apparel industry was the obvious choice. Training began with about five machines, and a like number of ladies willing to learn. Since that time the small frame building has grown, with three expansions, to a thoroughly modern 16,000 sq. ft. plant employing more than 60 highly skilled persons. All of these persons were trained by, and at the expense of, Terry Mfg. Co. Most of these persons were either: (1) unemployed, (2) on welfare, or (3) employed as domestics earning $10.00 to $15.00 per week. While this training has been a tremendous expense for the company, Mr. Terry feels that the future will well justify the cost. Although little help was available at the beginning, Mr. Terry has picked up the support of local banks (Roanoke and nearby Wadley) and the Small Business Administration along the way. This help has been an absolute necessity in securing the present physical facilities, but has been inadequate to provide the working capital necessary to build what Mr. Terry terms "a truly first-rate manufacturing and sales organization.

II. STAFF

Working closely with Mr. Terry since the beginning have been the other members of his family, his wife and three sons. "Without the unity of this family," he says, "we would not possibly have come this far." Mrs. Velma Terry has provided invaluable assistance as floor supervisor since the first day. Roy Terry traveled the 80 miles from Atlanta to Roanoke as often as possible while attending Morehouse College and the Atlanta University School of Business and is now vice-president of the company. Rudolph Terry, a recent Phi Beta Kappa Morehouse College graduate, is now the Production Manager. William Terry, although still in school at Morehouse, spends quite a bit of time traveling and purchasing for the company.

In addition to the Terry Family, the management team includes other key individuals. Mrs. Ramonia Drake serves ably as Quality Control Supervisor. Miss Willo Strickland, who will graduate from Albany State College (Ga.) in June, is the Operator Efficiency Supervisor. In addition, Mr. Terry states that he is searching for persons who have skills and talents in all phases of the apparel industry, from sewing to selling, or persons who are willing to learn.

III. PRODUCTS AND SALES

The highly versatile plant has made numerous types of clothing, from blouses to bell-bottom slacks. However, the main area of concentration now centers around ladies' dresses and uniforms.

The present plant produces some 6,000 to 7,000 of these items per week with a wholesale value of more than $1,000,000 annually. While most of Terry Mfg. Co.'s sales contacts are with wholesalers rather than the retail outlets, their garments reach the ultimate consumer through most of the major chain stores. The direct sales made to the large retailers have so far been "less than overwhelming", according to Roy Terry. "However, some of them now *seem* to be expressing genuine interest, especially in our Afro style garments for men and ladies and our ladies' uniforms."

Plans are also now in the process of being implemented which will supply these items to other markets. Individuals and small shops are being recruited to sell the Afro Dashiki garments on and near the nation's black college campuses. Also, the uniforms are being catalogued for mail-order sales through persons in local communities (e.g. nurses, beauticians, etc.) who will take orders on a commission basis.

IV. THE FUTURE

The future for Terry Manufacturing Company looks bright. Plans are already being made to increase employment to about 100 persons so that expected increases in sales can be adequately provided for. There is a solid nucleus of management and production personnel who expect to build a much larger and better organization. Mr. J. A. Terry undeniably deserved the "Black Businessman of the year for 1969" award recently presented to him by the National Association of Market Developers. Further testimony to the contribution to "black capitalism" made by Mr. Terry and his company is the Awards Luncheon for him on October 29, 1969 sponsored by the local all-white Chamber of Commerce. It is believed that this is the first time that a black man has been so honored by a Chamber of Commerce in the rural South.

A high level federal government official will deliver the keynote address. Representatives of education, business, and government on the local, state, and national level are expected to attend. All major news media have been invited. On this same date, open house for the guests and the general public will be observed in order to exhibit the recently expanded plant facility. Local citizens' look forward to this day as a history-making event for the community and the nation.

VIETNAM MORATORIUM—ADDRESS BY MAYOR SAM YORTY

Mr. MURPHY. Mr. President, on October 13, 1969, the distinguished mayor of Los Angeles, Sam Yorty, made what I consider to be a most forthright and perceptive speech to the National Institute of Municipal Law Officers at their annual convention.

Mayor Yorty very clearly pointed out what most of us understand "down in our consciousness" about the effect on Hanoi of the October 15 moratorium.

Mr. President, believing that Sam Yorty has articulated the majority view, I ask unanimous consent that the text of his remarks on this matter be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY LOS ANGELES MAYOR SAM YORTY

And so what's happening? We find again this great crescendo, this great building up of subversives, dupes, and people who don't understand, who think they are just marching against war—we are all against war—and they are trying to put the pressure on President Nixon to concede to the Communist demands.

They want the President to just pull out of there or agree to pull out on a certain timetable so that the Communists can know then that if they just hang on, they have a chance to victory and this is where they are planning to win the war now. They are not going to win it in South Viet Nam any more and they know it. We have paid horribly to get into this situation, more than we needed to, more than our allies needed to, but we have paid it already and they are in sad shape and they know they have to do something to try and force Nixon not to even give them the kind of a threat that would take them out of the war.

I want you to remember what President Eisenhower did, and I asked him in Palm Springs after he retired. I said, "General, I have heard so much about what happened in Korea, I'd like to just hear from you just what did you really do?" He said, "Mayor, it's simple." He said, "I got tired of waiting for them to negotiate and I sent word to them through diplomatic channels 'if you don't want to negotiate, I am going to take the restrictions off of American weapons and where we are to use them.'" And he said, "In ten days I had a note that they wanted to sit down and negotiate and have a cease-fire."

So we are reaching a point now where the Communists know that President Nixon has walked the last mile. He has given them about all the rope he intends to give them. They know there is going to be a decisive change and they want some assurance that the change will be that we will pull out and that the President won't have the backing of the American people to see that we are not going to turntail and be defeated with the consequences to the world, which I hope our people understand.

And so this great moratorium that they are talking about, this march, can only do one thing—it can encourage the Communists to stay in the war and increase American and allied casualties. So believe me, I don't think much of the politicians encouraging this moratorium and I hope that somewhere down

in their consciousness, they have some conception of what they are doing with American kids out there on that line risking their lives. And I say again, as far as I am concerned, I have told President Johnson and I have told President Nixon, that I don't think any President has the right to send kids out there to risk their lives under these restrictions because when you send them out there and say "risk your lives" but at home we say "don't escalate", what are you really saying? You are saying "let the kids risk their lives but don't do anything to risk mine because if you escalate, I might get involved and we are afraid of the Russians." Well, I'll tell you I'd rather we'd risk our lives than those kids'. They have their whole lives ahead of them.

We have reached the point that what we need is for the President to hear from the rest of the people of the nation and not just from the loud dissenters and the marchers who are the same kind of people who insisted on the appeasement of Hitler which brought such catastrophe to the world.

North Viet Nam, with just the right kind of ultimatum and if they really think we mean it—will get out of South Viet Nam and get out pretty fast. We have the power to absolutely eradicate that country in a couple of days if we wanted to do it and it is about time we let them know that the great United States of America is not about to be defeated by the kind of Communist tactics, both there and subversion at home and around the world, that they are practicing against us.

COMMENTS ON NEW YORK TIMES ARTICLE OF OCTOBER 16, 1969, ON PACIFICATION

Mr. McGEE. Mr. President, the New York Times article of October 16 on pacification represents an independent assessment of the real progress which has been made in this area in Vietnam over the past year. It confirms what our own officials are reporting about the substantial improvements which have been made in reestablishing security in the rural areas in Vietnam.

This progress in pacification is attributable to three major factors:

First, the offensive tactics used constantly by American and Vietnamese military units in seeking out enemy forces and preventing them from massing in a manner which would enable them to disrupt pacification.

Second, the increase in numbers and improvements in training and armaments of the Vietnamese Regional Forces and Popular Forces who provide security to the Vietnamese people at the village and hamlet level.

Third, the increasing effectiveness of the Vietnamese Government in carrying out the pacification program, starting with the special 3 months "accelerated pacification campaign" of November–December 1968 and January 1969. Formerly pretty much an American program, the Vietnamese Government has now taken on this program as its own.

The most striking corroboration of progress in pacification, as the New York Times article indicates, is through the improvement of road security and the return of tens of thousands of refugees to their hamlets of origin. The article speaks of these people as "leaving the Communist-controlled areas and moving into those more or less under Government control." Actually, these people left Communist-controlled areas in most cases 4 or 5 years ago and are now moving back to their own hamlets in areas over which the Government has recently taken control from the Communists.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PACIFICATION IN RURAL VIETNAM MAKING BIG BUT FRAGILE GAINS

(By Terence Smith)

SAIGON, SOUTH VIETNAM, October 15.—The road that runs south from Saigon to Cantho is clogged these days with trucks and cars that rattle along with careless abandon.

Sixteen months ago, in the wake of the Lunar New Year offensive, a drive along the stretch between Mytho and Cantho was a perilous adventure. Vietcong guerrillas regularly planted mines under the pavement and floated explosives under the bridges. In the evening and early morning snipers fired at passing cars from the trees lining the road.

Today as an extensive auto trip has confirmed, the only danger along Route 4 is the traffic, which is dreadful, and the potholes, which can shatter an axle.

The improved security along the road is one of the more visible examples of the progress achieved over the last year by the allied pacification program. While the enemy has concentrated his attacks on military targets, the $600-million-a-year effort to secure and develop the South Vietnamese countryside has proceeded almost without opposition.

The gains during the period have been striking. Rural security has been greatly increased—although American officials concede that it is still fragile—and the Saigon Government's control now reaches deeper into the countryside than it has for at least two years.

The expanded security in the countryside is a result of a combination of the pacification program and the enemy's decision during the last 10 months to concentrate on military targets.

With an eye toward escalating American casualties, the North Vietnamese and Vietcong have directed their principal efforts this year against Allied military installations rather than civilian targets. As a result, the forces assigned to the pacification program have encountered little opposition as they have pushed deeper into the countryside.

They have been operating in a sort of military vacuum, and the American officials in charge of the program are quick to concede that the progress that has been made would not have been possible had the enemy been determined to frustrate it.

Nonetheless, the officials, capitalizing on the opportunity, have redoubled their efforts during the widespread lull that has descended over the battlefield since the middle of August. They are attempting to make the most of it because they realize that it cannot last indefinitely. They acknowledge that the major test lies ahead, when the enemy turns his attention to the fruits of the program.

The officials well remember the Tet offensive of 1968, which delivered a severe setback to the gains achieved by the pacification program in 1967 and shattered the boundless optimism that characterized the official American attitude at the time.

"WE REALIZE ITS LIMITS"

Varied and widespread though it is, American officials readily acknowledge, the security that prevails in much of Vietnam could easily be upset by a determined enemy effort.

"There has been a steady expansion of security and Government control throughout the year," William E. Colby, who directs the pacification effort, said in a recent interview.

"But I realize its limits. We know it is still thin in many areas. It is thin at night and in the rural areas away from the towns."

To test the security, this reporter set off with two others on a five-day, 400 mile drive through the heart of the Mekong Delta. Unarmed and in a Volkswagen sedan, we drove the length of Route 4 from Saigon to Cantho, then up the bank of the Mekong River to Chaudoc, a lovely province capital on the Cambodian border, and back through Sadec and Mytho to Saigon.

NO SOUND OF GUNFIRE

We passed through towns, villages and hamlets and through miles of lush, green paddy fields without hearing a shot. Men and women are working the fields without visible concern for their safety, and in the towns the restaurants were busy until the curfew forced them to close.

A handful of mining incidents were reported during the week on some of the roads we used, but we encountered none of them.

The areas toured seemed prosperous as well as secure.

Television antennas poked up from innumerable thatched roofs, and in the towns gleaming new Japanese motorcycles crowded the sidewalks.

As another example of the improved security, Jim Clare, a reporter for Stars and Stripes, the Army newspaper, recently hitchhiked the length of Route 1—the late Bernard Fall's "Street Without Joy"—from the demilitarized zone to Saigon. He made the trip in 13 days without incident, arriving here last week.

In January, 1967, Michele Ray, a French free-lance journalist was kidnapped by the Vietcong when she attempted the same trip. She was released after three weeks in captivity. No one else had tried it since.

Gerold Hickey, the anthropologist who first came to Vietnam in 1962, recently compared the present security to the conditions that prevailed in the summer of 1964, before the vast American buildup was under way.

STILL MANY RISKY AREAS

"We used to drive up and down the coast and all through the Delta in those days," he said. "Now people are doing it again. You can drive from Danang to Dongha now. A year or 18 months ago it would have been suicide."

None of this is to say that there are not areas that the Vietcong dominate either wholly or in part. There are still many districts in the Delta and in the north where an American driving in anything less substantial than a tank is risking his life.

And there are still many areas that the Vietcong can rely on for sanctuary, support and supplies. Even in many of the regions where the Government presence has recently been established, the Vietcong still conduct their business at night and collect taxes on a regular basis.

But the pendulum has swung in the direction of the Government during the last year, and the shift is reflected in the much-maligned computeriezd analyses prepared each month by the experts on pacification. In the past their findings have been sharply challenged, by members of Congress among others.

According to official American figures, 89 per cent of the South Vietnamese people were living under "relatively secure" control of the Saigon Government as of Aug. 31—15.3 million of a population of 17.3 million. In the rural areas the figures are lower but still high; 84 per cent of those outside the cities enjoy "relative security."

A DEFINITION BY THIEU

In some cases that security is very relative—particularly at night, when the Vietcong are most active. In a recent speech President Nguyen Van Thieu came up with a definition of a relatively secure area that most people agree with. It means, he said,

an area that "Government representatives can visit without military escort in the daytime."

Even President Thieu would readily acknowledge that the situation can easily change at night or from one day to another.

The generally improved security is mainly a result of the enlarging and equipping of the regional and popular forces, nicknamed the Ruff Puffs, which along with the regular army, have taken over a large share of the military side of pacification. As a result of relentless American prodding, and in the absense of significant enemy opposition, they have spread out into the countryside and taken up the front-line defense of much of the rural population.

In addition a home-grown militia composed of men too young or old for the draft and of some women and girls has been developed over the last year and a half. There are about 1.5 million members of these people's self-defense force who guard their own villages or hamlets at night. About a million of them have received some rudimentary military training, and they have some 300,000 arms.

Although their contribution to defense may not be great in purely military terms, their presence has provided a major boost to morale.

SHIFT FROM VIETCONG AREAS

The relative security, despite its thinness, is attracting people into the newly pacified communities. Increasing numbers of refugees are leaving the Communist-controlled areas and moving into those more or less under Government control. Politics is not usually involved; people are simply in search of an opportunity to live and work in peace—a rare luxury in Vietnam.

Few officials doubt that the tide would be running in the opposition direction if the people believed they had a better prospect in the Vietcong areas.

There has also been a stirring of political life in the villages during the last year, and this too is a by-product of the pacification program. Elections have been held in about 1,900 of the 2,300 villages in South Vietnam, and though some difficulty was experienced in getting enough people who were both qualified and willing to run, the voting is said to have had a generally positive effect.

New village officials have been given substantial budgets to use for local development, and they now have administrative control over the rural development workers sent by the central Government as part of the pacification effort.

As a result the officials are operating with greater autonomy than they have had since President Ngo Dinh Diem suspended village elections 14 years ago. Returned to their traditional role, they have a vested interest in continued Government control.

Government troops and pacification workers recently pushed into an area in Sadec Province, in the Mekong Delta, long held by the Vietcong and known as the Triangle. They secured three villages that had been abandoned for more than a year, and within a month refugees poured back into the area. The fields surrounding the villages have been planted for the first time in several seasons, village elections have been held and the Government presence appears to be firmly established.

"The elections have produced the beginnings of community awareness and responsibility in the villages," Mr. Colby said. "But let's not overdo it—it's just a beginning, and we know it."

"The important thing is whether the structure we have set up is strong enough to resist the shock of an enemy attack," he said. "We have been working for the past year in a relative vacuum, but now we have documents that indicate that the enemy feels he must do something about the situation. So it's up to us to prepare for it."

The pacification program is a massive assistance and advisory effort that employs 14,500 people, including 7,300 Americans. Its goal is to extend the Government's presence in the countryside and rejuvenate economic and political life in the rural areas that have been disrupted by the Vietcong. But its primary task is security, and that is how its success is measured.

Officials of the pacification program have been expecting some enemy response since early this year, and they acknowledge that they have been mystified by the lack of it.

Now, as the result of the capture of a command-level enemy document, they expect it shortly. The document, which American analysts believe to be authentic, calls for a concerted military and political campaign to reverse the gains achieved.

In its ominous way the document is a compliment to the program—the first clear indication that the enemy is sufficiently concerned to attempt to counteract it.

DISABLED AMERICAN VETERANS SUPPORT SENATE RESOLUTION 271

Mr. DOLE. Mr. President, on October 13, I introduced, with 35 other Senators, Senate Resolution 271, calling on the North Vietnamese and the National Liberation Front to take certain steps toward bringing an end to the Vietnam war. I have received considerable response supporting the resolution, a response which is most encouraging, from a group whose devotion to this country and its ideals is unchallenged and unwavering.

Today I received a letter from Raymond P. Neal, national commander, Disabled American Veterans, endorsing Senate Resolution 271 and supporting it in principle.

Mr. President, I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DISABLED AMERICAN VETERANS,
Washington, D.C., October 20, 1969.

Hon. ROBERT DOLE,
New Senate Building,
Washington, D.C.

DEAR SENATOR DOLE: Thank you very much for sending us the copies of S. Res. 271 and remarks which you made upon introducing the resolution in the Senate.

The resolution calls upon the North Vietnamese Government and the National Liberation Front to take the following steps:

(1) acknowledge that a just and mutually agreed settlement is the best hope for lasting peace;

(2) show at the Paris peace talks the same flexibility and desire for compromise which the Allies have clearly demonstrated over the past year;

(3) agree to direct negotiations between representatives of the National Liberation Front and of the Government of the Republic of Vietnam as proposed by the latter;

(4) withdraw their insistence on Allied surrender through their demand for the overthrow of the Government of the Republic of Vietnam before genuinely free elections could be held; and

(5) provide information on the status of United States prisoners of war held in North Vietnam and by the National Liberation Front, and give evidence that these prisoners are being treated humanely in accordance with the provisions of the Geneva Convention;

The resolution resolves that it is the sense of the Senate that the United States must maintain its one fundamental goal in Vietnam of peace, with self-determination for the South Vietnamese people.

The five principles set forth in the resolution are, in our opinion most sensible, reasonable and practical and should appeal to all Americans who have a genuine concern for the security and welfare of our Country.

The DAV supports S. Res. 271, in principle; and, like you, we urge the North Vietnamese representatives to come forward with a positive and meaningful response.

Sincerely,

RAYMOND P. NEAL,
National Commander.

THE PESTICIDE PERIL—LXVIII

Mr. NELSON. Mr. President, a report on the relationship between DDT and hazards to human health was recently issued by the Environmental Defense Fund, Inc., an organization of scientists and attorneys with headquarters in Stony Brook, N.Y.

Evidence has definitely confirmed that DDT is causing the extinction of some species of fish and wildlife. Yet the effects of these same pesticides on human health have never been clearly understood, although evidence suggests links to liver and stomach ailments and to cancer. Now, recent studies on mice conducted by scientists supported by the National Cancer Institute confirm that DDT is a tumor-causing agent.

This is another aspect of the pesticide controversy about which we should be seriously concerned.

I ask unanimous consent that the Environmental Defense Fund press release be printed in the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

STUDIES SHOW DDT TO BE CARCINOGENIC—PETITION TO FDA REQUESTS ZERO TOLERANCE IN FOODS

Recent studies by a team of scientists supported by the National Cancer Institute have confirmed earlier evidence that the insecticide DDT is a carcinogenic or cancer-causing agent. The experiments were done with mice, but earlier work with rats and trout gave similar results. Another study showed that people dying of cancer contained higher than average amounts of DDT in their fat, a finding that could be interpreted as being consistent with the animal experiments.

This information formed the basis of a petition to the Food and Drug Administration (FDA) filed today by California Rural Legal Assistance on behalf of five pregnant or nursing women and the Environmental Defense Fund, Inc. (EDF), an organization of scientists and attorneys based in Stony Brook, New York. The petition requests FDA to lower the tolerance limits on DDT residues in human foods to zero, based on a law stating that carcinogenic materials cannot be tolerated in human food. Traces of DDT are widespread in foods, and all humans carry some DDT in their tissues.

As early as 1947 a study by FDA itself showed that when DDT was fed to rats there was an increased incidence of liver tumors [Fitzhugh & Nelson, J. Pharmacol. Exp. Therap. *89*, 18–30 (1947)]. Similar results were obtained recently using rainbow trout, where DDT in the food of the fish caused the formation of hepatomas [Halver, Bur. Sport Fish. Wildl. Res. Rept. 70, 78–101 (1967)].

Hungarian scientists examined more than

1,000 mice from five generations after adding 3 parts per million (ppm) of DDT to their diets. Leukemia appeared in 12.4% of the DDT mice, but only 2.5% of the non-DDT mice; 28.7% of the mice getting DDT developed tumors, while only 3.8% of the mice on clean food had tumors. Most of the malignancies in the DDT group were in the later generations [Tarjan & Kemeny, Ed. Cosmet. Toxicol. 7, 215–22 (1969)].

In a recent, definitive, and large scale study supported by the National Cancer Institute, DDT added to the diet of mice quadrupled the frequency of tumors of the liver, lungs, and lymphoid organs. The dosage level was many times higher than that normally found in human foods, a standard procedure used to increase the sensitivity of the experiment in testing for carcinogenic activity. DDT was clearly carcinogenic to the mice because it caused cancers of the same kind and at approximately the same frequency as did known cancer-causing agents [Innes et al., J. Natl. Cancer Inst. 42, 1101–14 (1969); Congressional Record, S. 4412, 1 May 1969].

In studies done at the University of Miami School of Medicine, human victims of terminal cancer were found to contain more than twice as much DDT in their fat as did victims of accidental death. The accident victims carried 9.7 ppm, which is about average for Americans, while the cancer victims contained 20–25 ppm in their fat [Radomski, Deichmann, and Clizer, Fd. Cosmet. Toxicol. 6 209–20 (1968).] In this study there was no way to tell whether the increased retention of pesticides caused the disease, whether the disease caused the increased pesticide retention, or whether there was no relationship between the two.

ADDITIONAL DEATHS OF CALIFORNIANS IN VIETNAM WAR

Mr. CRANSTON. Mr. President, since Thursday, October 9, 1969, the Pentagon has notified 14 more California families of the death of a loved one in Vietnam.

Those killed were:

Maj. Moses L. Alves, husband of Mrs. T. Mary Alves, of Highland.

Pfc. John T. Baker, son of Mr. and Mrs. Claude D. Baker, of Bakersfield.

Pfc. Domingo Y. Garcia, son of Mr. and Mrs. Jesus A. Garcia of Five Points.

S/4 James H. Graham, son of Mr. and Mrs. Clarence B. Graham, of Garden Grove.

Lance Cpl. Michael L. Holtz, husband of Mrs. Sandra L. Holtz, of Redding.

Sgt. William O. Jackson, husband of Mrs. Gwendelyn Jackson, of Compton.

Pfc. Gary L. McCloud, son of Mr. and Mrs. Louis L. McCloud, of Sacramento.

S. Sgt. David L. McCombs, husband of Mrs. Diane L. McCombs, of Chula Vista.

Pfc. Elvis E. Mullen, husband of Mrs. Debra S. Mullen, of Elk Grove.

Lt. James L. Rhodes, husband of Mrs. Linda L. Rhodes, of Fallbrook.

Sgt. Harry C. Shepard, Jr., husband of Mrs. Jeanette Shepard, of Cannino.

Pfc. Gary D. Taylor, son of Mr. Clark F. Taylor, of Menlo Park.

Pvt. John E. Duarte, Jr., husband of Mrs. Inez N. Duarte, of Los Angeles.

Sgt. Tommy R. Thomas, son of Mr. and Mrs. Roy G. Thomas, of South San Gabriel.

They bring to 3,840 the total number of Californians killed in the Vietnam war.

SENATOR YARBOROUGH URGES INCREASED EDUCATIONAL AID FOR THE HANDICAPPED

Mr. MONDALE. Mr. President, the distinguished Senator from Texas (Mr. YARBOROUGH), chairman of the Committee on Labor and Public Welfare, on which I am privileged to serve, has written an excellent article for the September issue of the Journal of Learning Disabilities. In the article, entitled "The Learning Disabilities Act of 1969, a Commentary," Senator YARBOROUGH discusses the tremendous unmet needs that exist, and our efforts to provide handicapped children with the education which they need and deserve.

In the following passage from the article, Senator YARBOROUGH illustrates the huge gap that exists between the plans Congress has made to assist in the education of the handicapped, and the unwillingness of Congress to provide the necessary funds for this effort. In addition, he relates this tremendous gap between our authorizations and appropriations for this vitally needed program to the need for our Nation to reorder its priorities. Senator YARBOROUGH writes:

It can be said that we have taken the first step toward providing all children with the education they need and deserve, but there are many steps ahead. We can be justifiably proud of the increasing national commitment to education for the handicapped, and at the same time somewhat awed by what is before us. We should be humiliated by how little has been appropriated to do what the Congress has already authorized to be done. For the current year, only $29 million was appropriated for Title VI grants, when the authorization was $200 million. With over 5 million handicapped children, not counting children with specific learning disabilities, the basic support program is providing only $5–$6 per child.

This is a time when funds are scarce, but we will spend our dollars on what our society demands. There will be money enough for whatever we feel is truly important. We must decide, individually and as a nation, just what it is that we believe to be important.

Senator YARBOROUGH has drawn upon his experiences as a member of the Subcommittee on Education for almost 12 years in introducing S. 1190, entitled the "Children With Learning Disabilities Act of 1969." The bill would provide the authority and the commitment which I believe is necessary to stimulate our Government into the kind of support which is needed in the field of education for the handicapped, and I am proud to support it and work for its passage.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LEARNING DISABILITIES ACT OF 1969, A COMMENTARY

(By RALPH W. YARBOROUGH, U.S. Senator from Texas, chairman, Committee on Labor and Public Welfare)

Educational programs for 6 million handicapped children are needed. Only 2 million presently receive educational services. The lag between large Congressional authorizations and minimal appropriations limit funding to $5–$6 per handicapped child. Children with specific learning disabilities totaling between 500,000 and 1½ million are in especially bad plight with only 18% receiving assistance. The Federal government can and should play an influential role in the development of effective education for children with specific learning disabilities.

In the years that I have been privileged to serve in the United States Senate, 11½ years of that time on the Senate Education Subcommittee, I have had a chance to help develop and pass many major education bills which have enhanced the educational opportunities for countless numbers of the nation's citizens, tiny children just getting their start, primary youngsters, youth, and adults. Much of the effort has been directed to children in our elementary and secondary schools for strengthening the capability of the schools of our land to provide quality education for all children. Emphasis has been on better trained teachers, use of updated instructional materials and appropriate educational technology, relevance in curriculum practices, and the provision of special counseling, health and other services to meet individual needs so that youngsters may learn. Institutions of higher education have been assisted, not only in providing more opportunity for college students through financial assistance, strengthening of the graduate and undergraduate academics, but through the expansion and strengthening of those departments which concentrate on training of educational personnel.

In addition to providing the means to improve the educational systems, Congress has, as we so well know, given special attention to those unfortunate children whose special needs the education system must satisfy if they are to develop to their potential and participate as first class citizens in our society. I am referring to our children who suffer from extreme economic or environmental deprivation, or from physical or mental handicaps. Not only have we set a goal for excellence in education, but we have made a basic commitment in our nation to provide educational opportunity to every child.

However, there are areas where we are obviously falling short of our goals. We are only beginning to meet the needs of the handicapped and our gaps must be recognized and remedied if we are to move ahead. Called to my attention are recent figures from the state education agencies which point out that only 2.1 million of approximately 6 million handicapped children are receiving the educational services they need. Among these whose needs are not presently being met are those who have been found to have specific learning disabilities.

The National Advisory Committee on Handicapped Children has advised the Congress on the plight of these children and gave a conservative estimate indicating that between 500,000 and 1½ million, or 1 to 3 percent of the school age children are included in this category. Available data from federal reports indicate that less than 18 percent of children who may have been classified in this group are receiving services. This estimate is based on the annual reports received from the 50 states and the District of Columbia required by Title VI–A of the Elementary and Secondary Education Act, a program which assists handicapped children in elementary and secondary schools.

To meet the needs of these children, the Bureau of Education for the Handicapped has estimated that over 22,000 teachers and specialists need to be trained immediately, and put into the field. Although there has been much progress in the education of handicapped children in recent years, at the state and local levels as well as federally, the gains we *have* made merely emphasize the needs which still exist.

The child with a learning disability frequently has an invisible handicap; however, it *can* be recognized. Authorities in the field tell me that the symptoms are revealed

through the child's persistent behavior deviations and learning difficulties. While it may frequently be an organic problem in its original cause, its major treatment rests within the educational program. The prognosis for improvement is dependent upon the recognition of the symptoms and proper diagnoses at the earliest possible age, with intensive remediation directed to the learning problems.

The progress which can be made by handicapped children when their educational needs are fulfilled is very, very impressive. We have seen many formerly handicapped youth join the ranks as productive members of society with the ability to take their places along with their fellow men without any hardship because of their handicaps. They received education and career preparation. They were given special educational services; they are as adjusted as the next man to the ways of life. I have seen many, unfortunately, whose handicaps have been multipled as they became older, who had personality problems, lacked educational skills and the ability to make personal adjustments and the ability to hold a job. While in school, no one recognized their special needs or knew how to deal with them, so they experienced persistent school failures, became discouraged, turned inward into themselves and withdrew or were excluded from school. This must not happen! It is my personal conviction that many handicapped children, with appropriate education can be helped to enter the main stream of society, and this society must not fail them!

In an effort to bring the needed assistance to learning disabled children, on February 28th of this year, I introduced a bill, S. 1190, in this 91st session of the Congress, entitled: the *Children with Learning Disabilities Act of 1969*. This bill would provide for the types of special services so necessary at this stage in the development of the field of learning disabilities. It would authorize programs of research and related activities, surveys and demonstrations related to the education of children with specific learning disabilities; professional or advanced training for educational personnel who are teaching or preparing to be teachers of children with specific learning disabilities, or to support the training for persons who are preparing to be supervisors of teachers for such personnel. It would also provide for model centers for improvement of education of children with specific learning disabilities. Model centers could provide testing and educational evaluation to identify children with specific learning disabilities; develop and conduct model programs designed to meet the special educational needs of such children; and assist the appropriate educational agencies or professional organizations and institutions in making such model programs available to other children with specific learning disabilities.

It is my belief that through expanded research efforts we can find more effective methods and materials that will improve the education of these children. Through supporting training we can provide that supply of trained personnel without which all educational programs are impossible, and by establishing model centers we can demonstrate the best of current practice and provide the means by which others can emulate these good practices.

Aside from financial assistance, the federal government can and should play an influential role in the development of effective education programs for children with specific learning disabilities. One of its most important functions is to recognize and publicize the most critical needs of the field as they arise. It would seem that the most immediate and significant need in the field of learning disabilities right now, aside from those needs of identification, diagnosis, and ultimate remediation of learning problems, is that of leadership and teacher training. The training of leaders and advanced graduate students subsequently results in the training of researchers, the setting up of supplemental services and research centers to improve diagnostic and remedial techniques, and the training of teachers. In addition, in-service programs could be facilitated for teachers who already work with children, thereby providing immediate and direct service to school districts as well as face-to-face contact with learning disabled children across the country.

For years, children whom we now recognize as having specific learning disabilities have slipped through the cracks of educational diagnosis. They have been called by a multitude of names, or lumped into larger heterogeneous groups. Despite old definitional difficulties, however, the fact remains that the problems of these children are finally *beginning* to be explored and understood. We have stopped giving definitions, and are now defining programs. What is needed now is a comprehensive program on the national level to serve these children, and to prevent future instances of misdiagnosis as has happened all too many times in the past.

In view of these needs, the members of the National Advisory Committee suggested in their recommendations to the Commissioner of Education, that the problems of children with specific learning disabilities are so important as to justify special attention and special consideration by the Congress. While it has been possible for children with specific learning disabilities to participate to some extent in the federal programs designed in the last few years to increase educational opportunity for handicapped children, these efforts are not comprehensive enough to provide a full-scale attack on the problem.

Personally, the kind of programs to help these youngsters which I support are those which will place the emphasis where it belongs: on an analysis of the learning task, on the development of special teaching techniques and materials, on meaningful use of these materials to find the learning abilities of the child, and to determine barriers to learning which must be circumvented. Coming to terms with these children in designing educational programs is going to help us to learn more about education for every child. It is going to help us to realize that children have individual learning styles and characteristics, and that we are going to have to do more than pay lip service to these individual differences. Educators should be able and will be able to design special, individualized, approaches to the learning tasks which face children.

In examining our recent efforts, we find that in 1966, Congress passed legislation creating Title VI of the Elementary and Secondary Education Act. This established a program of grants to the states, the National Advisory Committee on Handicapped Children, and the Bureau of Education for the Handicapped. Title VI, also called the *Education for the Handicapped Act*, was more than a collection of several new programs . . . it was a symbol of a national concern for handicapped children. It was a statement of policy. In effect, the Congress said . . . "We recognize that the handicapped child and his parents have not been getting the full benefit of our educational system, and we feel that it is a national priority to do something about it. We must aid the local schools and the states in meeting this challenge."

It can be said that we have taken the first step toward providing all children with the education they need and deserve, but there are many steps ahead. We can be justifiably proud of the increasing national commitment to education for the handicapped, and at the same time somewhat awed by what is before us. We should be humiliated by how little has been appropriated to do what the Congress has already authorized to be done. For the current year, only $29 million was appropriated for Title VI grants, when the authorization was $200 million. With over 5 million handicapped children, not counting children with specific learning disabilities, the basic support program is providing only $5–$6 per child.

This is a time when funds are scarce, but we will spend our dollars on what our society demands. There will be money enough for whatever we feel is truly important. We must decide, individually and as a nation, just what it is that we believe to be important.

People often ask how politicians think and what it is that we value in life. The true measure of our lives is what we have done in office to improve the lot of our fellow man, to improve the quality of our civilization. To me, steps such as we have taken in the past and will continue to take in the future to aid the handicapped are an important reason for our arduous exertions to assume and retain the offices we hold. Without progress in these and other areas of greatest need, governmental service would be a bleak and gloomy life. Only by aiding others can our work earn the title of "service."

CONTRACTS OF AGENCY FOR INTERNATIONAL DEVELOPMENT WITH NATIONAL LEAGUE OF INSURED SAVINGS AND LOAN ASSOCIATIONS

Mr. WILLIAMS of Delaware, Mr. President, under our AID program a series of contracts involving expenditures of $355,000 has been negotiated with the National League of Insured Savings Associations wherein this organization is supposed to furnish the services of construction inspectors and technical supervision for the inspection of housing and all other work requiring certification under the housing guarantee program in Latin America.

The National League of Insured Savings Associations, with Washington offices or Washington representatives, is a lobbyist for the U.S. savings and loan group.

Under our democratic system there is nothing wrong with American industry joining together and employing Washington representatives or lobbyists to keep them informed of legislation affecting their industry, but it is strange to find the Federal Government entering into contracts with these same Washington representatives or lobbyists and paying them to act as advisers to the Government on programs under which they as an industry could be affected.

As an example as to how this can raise questions of a potential conflict of interest, I call attention to a situation wherein one of the individuals assigned to carry out the duties under this contract was an officer and member of the board of directors of the association and also the president of a Federal savings and loan association operating in Hyattsville, Md. The Inter-American Development Bank, which was involved in financing the Latin American operations, arranged a loan for a savings and loan association in Peru, and one of the requirements of this U.S. Government loan to this Peruvian savings and loan association called for the dollar deposits in a U.S. institution. These dollar deposits by the Peruvian Savings and Loan Association, which received the loans from IDB and which were required to be deposited in American banks, were placed in the Hyattsville bank of which this offi-

cial was the president. In fact, as recently as July 31, 1969, a call to this Hyattsville savings and loan association confirmed that he was still carried as an officer and active member of that bank.

This potential conflict of interest was called to the attention of AID, and presumably after what they described as a thorough review of the circumstances they concluded there was no conflict of interest and that the above circumstances were merely coincidental.

One of these task orders for services—contract No. 4—the largest, was entered into on March 29, 1968, with a cost limitation of $95,000. Less than 7 months later this task order cost limitation was increased to $355,000. As of April 30, 1969, $193,321 had been paid.

Subsequent amendments to their contract expanded the services of the contractor to provide program development services for international savings and loan conferences, seminars, exhibits, training programs, and related meetings designed to achieve the objectives of the Latin America housing investment guaranty program. Many of the stipulated services outlined under contract No. 4 appeared to be duplications of the first contract.

This contract with the National League of Insured Savings and Loan Associations provides that they can set up Washington offices and charge AID for executive and clerical salaries, office supplies, travel expenses, telephone and telegraph, publication subscriptions, and so forth, to which they can add 20 percent before they begin charging for task orders and contracts they are supposed to carry out in Latin America. In the period January 16, 1967, through April 1969, $200,391 was paid to the National League for administrative costs, plus $22,000.00 for overhead, making a total of $222,391 as administrative costs to support task orders amounting to only $177,855.

It appears that the National League of Insured Savings Associations may be using this contract with AID to defray a portion of the expenses for maintaining a Washington office for their organization whose primary duties are to keep their membership advised of the legislative processes at the national level and on occasions to testify before Congressional committees expressing the views of the organization which they as lobbyists represent.

I recommend that this contract not be renewed.

NURSING HOMES FOR THE AGED AND INFIRM

Mr. RIBICOFF. Mr. President, for thousands of our Nation's elderly the problem of finding a good nursing home involves a painful and anguishing search.

It is a sad commentary on our society that many of its nursing homes are cold, callous, and cash oriented and only a very few are warm, helpful, and caring.

The articles published in Parade magazine and the Trumbull Times describe the kind of love, care, and service that can be built into these homes.

St. Joseph's Manor, in Trumbull, Conn., run by the Carmelite Sisters for the Aged and Infirm, has often been the subject of study and praise. I have visited this home, and I know its administrator, Mother Bernadette. St. Joseph's and Mother Bernadette well deserve the kind remarks made by these authors, for St. Joseph's fully provides the warmth, love, and care that should be found in all our homes for the elderly.

I ask unanimous consent that the articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Parade magazine]

NURSING HOMES FOR PEOPLE, NOT PROFIT

(By Sid Ross and Herbert Kupferberg)

Are there any good nursing homes in the U.S.? It's a question that is being asked more and more frequently by thousands of old people moldering in institutions which often provide inadequate, indifferent care, and by sons and daughters who pay large sums to keep them there.

The answer to the question is: "Yes, but far from enough." Many nursing homes fully deserve their notoriety as "elephants' graveyards" where old people come to die in hopelessness and despair. But there exists a handful of excellent establishments which disprove the theory that nursing homes have to be cold, callous and cash-oriented. These good nursing homes constitute maybe 5 percent of the 25,000 which exist today. But there's no reason why they couldn't total 95 percent, provided they regarded their residents basically as people to care for rather than "bodies" to make money from.

"We want our elderly residents to live out their lives as independently and happily as possible." That's the policy enunciated by Mother Bernadette, the administrator of St. Joseph's Manor in Trumbull, Conn., and it's the philosophy that motivates the better nursing homes throughout the land, most of which are affiliated with religious or philanthropic groups.

St. Joseph's, where 265 men and women are living out their years in comfort and contentment, is one of a number of old-age establishments run by the Carmelite Sisters for the Aged and Infirm. The Roman Catholic order regards old people as objects of love, not charity, and considers it just as important to have a first-rate pastry chef to serve them as a gleaming, up-to-date clinical laboratory. Although many of the residents at St. Joseph's are ill, they're never called "patients." They live in cheerful rooms with private baths, they have a broad range of social activities available, but they're not pushed into doing anything. They don't even have to eat in the pleasant dining room—if they prefer, they can take meals in their rooms or get a snack in the "Wedgewood Room," a comfortable lounge that has a cocktail bar tucked away in the corner.

NO PRESSURE

The average age of the dwellers in St. Joseph's is 82, and some of them have spent time in other institutions before coming there. "I've never seen another place like it," says one 84-year-old woman. "There's no pressure, everything is right where I want it, and the sisters are marvelous." Smiles St. Joseph's administrator, Mother Bernadette: "Our philosophy rests on respect for the human being—respect for his soul and spirit as well as his body."

The one problem with a place like St. Joseph's is the difficulty of getting in. Most of its residents come from Fairfield County, Conn., and the majority are Catholics, though other religions are represented. There's a long waiting list. Unlike some institutions, St. Joseph's and similar homes demand no life contracts, assignments of assets or other money-grabbing arrangements. The base rate paid by its occupants is $463 a month. It operates at a loss, of course, which is made up by donations from the Bridgeport Diocese and by the devoted services of the Carmelite Sisters.

Deficits—and services—also are the stories of such excellent institutions as the Isabella Geriatric Center of New York City, affiliated with the Federation of Protestant Welfare Agencies, and Golden Acres of Dallas, Tex., which has the support of the Dallas Jewish Welfare Federation.

The administrators of these institutions call them places "to live, not to die." The elderly residents themselves describe them even more eloquently.

IT HAS EVERYTHING

Says Miss Bessie Bishop, an 85-year-old retired New York City schoolteacher who pays $321.50 a month for one of the 231 cheerful apartments in Isabella House, a beautiful new 17-story edifice in upper Manhattan: "I get everything here. A beautiful apartment, good meals, and a wonderful feeling of security. I don't have to worry about getting sick at night. I just press the buzzer. I stay cheerful and enjoy myself. I go out every day, visit friends, go to the theater. I wouldn't be anywhere else."

Adds a 91-year-old woman who lives down the hall: "I love it here. They don't let you rot away. They make you feel that you not only have a brain but that you should use it as long as you're alive. They help give you the grit to keep on living. That's why I won't ever give up."

Director Herbert Shore of Dallas' Golden Acres agrees that a good home should have as its prime objective to preserve social and intellectual skills, as well as bodily well-being. "We want to treat the total person," he says, "not just a broken hip or cardiac condition."

Golden Acres, which gives its 164 residents keys to their rooms and to the front door, and lets them come and go as they please, will run risks to help foster a spirit of independence. It once sent a busload of its elderly residents 250 miles to the HemisFair in San Antonio. "We decided we'd take the risk of someone dying on the trip," explains Shore. "At that age, they could die suddenly in bed. On an enjoyable outing, at least it's with their boots on."

Shore also has an unexpected word of understanding for families who want to send aged parents or grandparents to a nursing home. Most families, he says, haven't got the know-how, to say nothing of the money, to care for the aged. "Children," he contends, "shouldn't give up their lives just for an old parent, especially when this care can almost never be as well as it should be."

A 76-year-old man living at Golden Acres agrees with him: "I have seven daughters and I could live with almost any one of them. But they have their own lives to lead, and so do I. With them, I'd feel left out and in the way. I'm better off here."

LONG WAITING LISTS

At Golden Acres and at Isabella, as at St. Joseph's, there are hundreds waiting to get in. For though homes such as these can and do operate throughout the country, there simply aren't enough of them. Instead the U.S. has seen a tremendous upsurge in recent years of private, proprietary, profit-making nursing homes—their growth abetted largely by Medicaid and Medicare payments from the government. It's estimated that federal expenditures for nursing home patients amount to $750 million a year. Concurrently, new nursing home issues have burgeoned on the stock market, with the magazine *Harvest Years* reporting that such securities "are hotter than they've been for years."

Officials of places like St. Joseph's, Isabella and Golden Acres acknowledge that the private nursing homes have a function to

perform—they only wish that some of them would perform it better.

Parade visited one of the better private nursing homes, Hillhaven of Orange, Calif., one of a chain of such institutions. It's a pleasant, modern one-story building with a 112-bed capacity. Fees are $35 a day for a private room, $22 for two in a room, $17 for three. Anything above basic services costs extra.

Unlike St. Joseph's Isabella and Golden Acres, Hillhaven isn't a geriatric center operating at all levels of old age care, accommodating those in good health and bad alike. It's strictly for sick people, and since a great deal of medical care is often required, bills can soar. The average length of stay is seldom more than 90 days. Explains Hillhaven's administrator, Mrs. Florence Kirkland, a registered nurse: "A place like ours can't take all long-termers. We'd become a warehouse. Also, we couldn't afford it; we'd lose money."

GOOD EATING

To a visitor, a Hillhaven hasn't got the heart or the warmth of an Isabella, a St. Joseph's or a Golden Acres. But its staff is ample, its administrators patient, its upkeep meticulous, and its meals excellent. Most of the patients seem to be reasonably content as they sun themselves outdoors, watch TV in their rooms, or chat with visitors in lounges. To relatives of old people who might have guilt feelings about sending them "away," places like Hillhaven are a paradise compared to many nursing and old age homes.

But do they provide an adequate answer in a country whose over-65 population now is over 18 million, and is rising rapidly as new advances in medicine and science expand the average span of life? Many responsible authorities are of the opinion that while the private establishments should continue to play an important role in meeting the problems of our aging population, a much more comprehensive, systematic, and communally supported approach is needed. Sums up Isabella's Lawrence E. Larson: "Laws and regulations must be changed to recognize that this kind of care is not a function of charity, but a public responsibility."

[From the Trumbull Times]

NURSING HOMES DO NOT REPLACE THE FAMILY

(By Cip Ayalin)

Loneliness affects any person, but more so when one faces old age.

"This can happen to anyone, regardless of his financial situation or health condition," says Mother Bernadette, administrator of St. Joseph's Manor. The manor is nine years old today. It was dedicated Oct. 2, 1960, as one of the 32 old age establishments in the country run by the Carmelite Sisters for the Aged and Infirm.

Mother Bernadette continues: "And if they live in a fine hotel, their own home or an apartment but lack companionship, their lives can be empty. This is true of any man or woman who is left alone because of a spouse's death."

Another problem is suitable living accommodations. "In most of their lists of priorities, I have found that they want adequate housing that meets their particular needs. Those who are perfectly well at their age may want an independent living arrangement where they can do some of their own cooking or housekeeping, but may still need some form of service like meal services, medical, social and some specialized services offered in one place of a good residence for the aged."

At St. Joseph's, the aim is to provide the best possible care for the residents. Although many of the residents at St. Joseph's are ill, they are never called "patients." The Roman Catholic order regards old people as objects of love, not charity. They live in cheerful rooms with private bath. They have a broad range of social activities available, but they are not pushed into doing anything. They do not even have to eat in the pleasant dining room. If they want to, they can take meals in their room. "We want our elderly residents to live out their lives as independently and happily as possible," says Mother Bernadette. She had just arrived from a two weeks trip to Dublin, where she attended the Eleventh World Congress of the International Society for Rehabilitation of the Disabled.

Mother M. Bernadette de Lourdes was born in Dublin and entered the Carmelite Sisters in New York in 1932. Educated in Ireland as well as at Fordham, New York and Columbia Universities where she studied social work, public administration and public health, she has held many administrative posts relating to the Carmelite Sisters' function.

"My interests in the physical, social, emotional and spiritual welfare of the aging was the reason for my entering this particular congregation," she says.

She mentions several levels of care in talking about the elderly. "Each older person is in the position to obtain the kind of care he needs at this particular time. True, needs can be raised but in most states such as Connecticut, older people do not have a tremendous financial problem because they have resources of their own. Usually they are eligible for assistance they can purchase either in a rest home with good nursing supervision or in housing for the elderly. Many people do provide for their old age but I cannot support any statistics whether or not the majority of the aged have financial problems. They have Social Security benefits although these benefits are not adequate to meet some of their needs at the present time.

"Many have pension plans from former employments. Older people are really making more plans for their retirement. Those who are becoming old now have more resources in their old age than older people, say 10 years ago.

The Carmelite sisters operate 31 facilities for the aged in this country and one each in Scotland and Dublin, maintaining their position as leaders in the field of geriatrics. St. Joseph's is the largest of their establishments. Here, 265 men and women are living out their years in comfort and satisfaction. Supporting this group, whose average age is 82, are part and full time professional help including 23 nuns. Perhaps what makes the place more cheerful are the young faces of about 100 volunteer high school girls—the Carmelettes—who aid the residents of St. Joseph's. The program began about the same time St. Joseph's Manor was established.

"Any good residential care facility for older people should be a combination hotel and house care facility," says Mother Bernadette. "This is really what it amounts to here because we have four levels of care. First, it is their home. There is a hospital care for them with extended care services from skilled physicians and nurses as well as special care sections for those who are blind."

Mrs. Annie C. Powell just turned 82 two weeks ago. A quiet woman, she has a reserved sense of humor while she played her "talking book." The record player is next to her and she listens to her favorite mystery stories: "Ellery Queen."

Mrs. Powell is partially blind. She has been a resident of St. Joseph's for nine years and comments: "This is home away from home. The nuns are all wonderful," demonstrating with her hand a fingered "O" and grasping for the right word, says in her soft voice, "Excellent!"

Mrs. Powell, who shares the room with another woman, has had two operations. "The nuns visited me everyday when I was at St. Vincent and Bridgeport Hospitals," she says, turning to her newly finished pink and white crocheted pillow case. "I knit this for five days, all by feel," emphasizing the date of Dec. 1 when she will exhibit her work for the St. Joseph's fair. On her table are pictures of her two daughters and grandchildren; she proudly mentions their names.

Like Mrs. Powell, many of the residents came to St. Joseph's and in their stay, learned various art and craft work. Mother Bernadette says that proceeds from the exhibit will be used for various activities, like occasional bus trips.

Another resident is 79-year-old Mrs. Emily Sevick, a Trumbull resident for 15 years and five years at St. Joseph's. "I like it here, although it took me five months before I could get in," she said. She likes the entertainment provided by the Sisters and television makes Mrs. Sevick happy. "It's a godsend. Just like anybody, I guess, I spend hours watching the shows."

Mrs. Sevick has her own private room in the fourth floor of the building overlooking the antique wooden water tank and windmill located outside in the resident compound. "My son and his family visit me occasionaly and sometimes take me to their home in Huntington," she says.

It does take time to be accepted at St. Joseph's because of the long waiting list, but nobody is excluded from entering. Basic age requirement is 65 and its occupants pay the base rate of $463 a month. The home operates at a loss but is made up by donations from the Bridgeport Diocese and by the services of the Carmelite Sisters. Most of the residents at St. Joseph's come from Fairfield County and the majority are Catholics although other denominations are accepted.

Mother Bernadette explains: "Older people prefer to live close to their family and friends and to past associations.

Mother Bernadette, who has served on and is serving on numerous state and local committees concerned with services and program for the aging, has received a number of awards related to her work. Among them are the Distinguished Service award from the Courtland Gardens Convalescent Hospital at its second annual symposium on aging and the David C. King award for services to the elderly from the Connecticut Society of Gerontology of which she is a member. She is a fellow in the Gerontological Society, the organization concerned with the study of the aging process.

During her past term as vice president of the American Association of Homes for the Aging, she was honored for creative and distinguished services to non-profit homes. The AAHA is the national membership organization of non-profit voluntary and governmental institutions for senior citizens. It was founded in 1961 with the assistance of a Ford Foundation grant, and sponsored by the National Council on Aging of which Mother Bernadette is also an active board member. She is also a member on the Governor's Advisory Council on Aging.

In 1960, she served on the National Advisory Committee for the White House Conference on Aging and on the advisory committee of the Federal Housing Administration. At the invitation of former President Johnson, she witnessed the signing of the "Older American Act of 1965" at the White House.

Her published works include the book, "Where Somebody Cares" published by G. P. Putnam's and Sons. The book is used as textbooks on social welfare by some universities. She has served on the advisory committee for the publication of "Standards of Care for Older People in Institutions" and for the film, "A Place to Live."

Carmelite Sisters for the Aged and Infirmed celebrated their 40th anniversary early last month in Germantown, N.Y. The order was founded Sept. 3, 1929, by the present mother general, Rev. Mother M. Angeline Teresa. Mother Angeline began her work with six companions and seven elderly guests in a small house on upper Broadway

in New York City. The congregation has now grown to about 500 sisters.

During the anniversary, Mother Angeline expressed the progress in the care for the elderly. "Throughout the past 40 years the objectives of the Carmelite Sisters has always been the same—to meet the needs of the elderly according to the times. But, these needs do change. As the Carmelties, other groups, and the public have in the last 40 years been able to adapt programs to meet these changing needs, they will continue to do so in the future, with more and more creative and innovative programs and more and better care for our growing elderly population.

"The families of these people have changed too. Where once a family spent generations in the same place, our more mobile society has given the elderly the dilemma of choosing whether or not to leave the old home town with the moving family, or leave the family and remain in town. Nursing homes provide a substitute which is the next best thing to one's own home in a familiar environment.

"Nursing homes do not replace the family, nor do they relieve relatives of their responsibility toward the aged person. Carmelites have always encouraged the family to be involved and to take responsibility in planning for the future," she concluded.

EDUCATIONAL REFORM IN MICHIGAN

Mr. GRIFFIN. Mr. President, recently Gov. William G. Milliken, of Michigan, proposed a bold and imaginatively conceived program of statewide educational reform. His recommendations, which include significant structural changes in school operations and financing, are designed to meet the educational demands of today and provide the flexibility so essential to educational excellence.

In my opinion, a review of his proposals for Michigan will benefit those throughout the Nation who are concerned with educational reform.

I ask unanimous consent that Governor Milliken's special message to the fall session of the legislature be printed in the RECORD.

There being no objection, the special message was ordered to be printed in the RECORD, as follows:

GOV. WILLIAM G. MILLIKEN'S SPECIAL MESSAGE TO THE FALL SESSION OF THE LEGISLATURE ON EDUCATIONAL REFORM, OCTOBER 9, 1969

Ladies and Gentlemen of the Legislature; I am grateful to all of you, as members of the Legislature, for extending me this opportunity to appear before you today in joint session to submit a detailed plan for improving the quality of education in Michigan.

My recommendations will be specific, and they will be followed by bills to implement these recommendations—bills which will be ready for introduction Monday night.

The Commission on Educational Reform, of which I served as chairman, spent hundreds of hours in assessing our educational problems and in recommending solutions to these problems. This Commission fulfilled its task in cooperation with a Citizens Advisory Council and functioned on a completely nonpartisan basis. Legislative action, I believe, must be equally non-partisan. Of all the issues we face, none lends itself more logically or compellingly to cooperation than educational reform—cooperation between the Legislature and the Governor, between the two houses of this Legislature, and between the two parties. We owe it to the future, for our future is bound inseparably to the future of our children, and their future is bound inseparably to education.

The Commission report, which has been presented to you, points out that our state structure is lacking in accountability, and that our systems of school tax collection and distribution are inequitable.

I am absolutely convinced that the people of Michigan are willing to pay more for education if they can be convinced they are getting their money's worth. I believe this is true among Republicans, Democrats and independents. Your legislative questionnaires, many of which you have sent to me, bear this out.

I also believe the benefits of educational reform will far offset the costs.

Education is not an unrecoverable cost. It is a productive investment which has a lifetime rate of return, and pays dividends through an improved society and greater opportunity for individual members of that society. It is the Legislature, acting for the people, that will make the decisions which will determine whether we can make quality education not only our highest goal but also our best investment.

All indications are that parents are highly concerned not only about the costs of education, but also about the quality of education, including such matters as class size, classroom discipline, school facilities, vocational training, teaching performance and integration.

My proposals will relate to these matters and others.

They will require two constitutional amendments, substantive changes in organization, bold alterations in our tax collection and distribution systems, a decrease in property taxes, and increases in other taxes. The proposals will require three years to implement.

They are submitted to you now, in this special session, so that you can deal with them unhampered by the myriad bills which will require your attention in the regular session beginning in January.

An important part of the over-all reform, of course, is the legislative program for next year, which must be responsive to immediate needs and consistent with long-range goals.

THE 1970–71 YEAR

A. School aid bill

I am strongly recommending that you pass a school aid bill for 1970–71 during this fall session. The bill that I am proposing stresses increased program and financial equity and provides for the beginning of a smooth transition to the implementation of the classroom unit concept in 1972–73.

The bill includes increases of $183 million over the current fiscal year for the various state aid programs. Of the new monies, $70 million would be allocated for improving financial equity in the basic membership allowances. My bill would lessen significantly the financial inequities faced by districts with local property valuation per pupil at or near the statewide average.

The bill would provide a uniform basic membership grant per pupil based on $535 minus 14 mills times the SEV per pupil in the district. The minimum millage rate for participation would be set at 12 mills and the rate for maximum participation would be 16 mills. This formula will provide new monies to those districts presently having the most severe resource constraints, particularly the larger urban areas of the state.

Another significant aspect of the bill is a $30 million recommendation to reduce the pupil-teacher ratio in the districts presently having the highest pupil-teacher ratio. By appropriating $30 million for approximately 3,500 additional teachers, greater program equity is provided and the transition to the classroom unit outlined in the "Professors' Equal Quality Plan" will be eased considerably. To insure that these funds reach districts presently making substantial efforts to raise school revenues locally and which still have a high teacher-pupil ratio, I am recommending that this assistance be available only to districts currently levying 20 mills for operation and with a pupil-teacher ratio in excess of 26–1.

The school aid bill I am proposing will continue the existing special aid categories taking account of cost increases.

Our retirement system obligations mandated by the Constitution will require over $45 million in new money for 1970–71.

The bill will also include a section appropriating $25 million during the 1970–71 fiscal year to assist in paying salaries of an estimated 5,800 certified lay teachers of secular subjects in accredited non-public schools.

B. Quality, evaluation and improvement in basic skills

Education is a process embodied in a structure.

I am proposing basic structural changes designed to adapt the educational process to our complex and rapidly changing society. But the whole process, including the proven elements and the new elements, needs continuing evaluation and improvement.

I am preparing separate legislation establishing a unique and comprehensive program of evaluation and improvement in the basic skills—reading and mathematics—focusing upon the following objectives:

1. To establish meaningful achievement standards in these skills and to identify children with the greatest educational need in relation to the standards.

2. To provide the general public with periodic and readily interpretive data regarding progress of the educational system in this state.

3. To establish a climate for continued evaluation of child achievement by local districts so as to encourage program improvements likely to influence the educational attainment of needy students.

4. To provide every school system with strong incentives to introduce new and promising educational programs to improve the education of children in the essential skills—model programs to raise the level of achievement of those with the greatest need as well as model programs to raise the level of achievement of all students.

5. To provide the state with the information needed to allocate scarce dollars and professional services in a manner best calculated to equalize educational opportunity for all children in all districts in order that they might achieve competence in essential skills.

My proposal specifically requests a statewide testing program in the basic skills for all students in grades 1, 2, 4, 7, and 10. This assessment effort is expanded from the yet-to-be implemented Department of Education program in grades 4 and 7 in order to identify at the earliest possible time the individual students who are having the most difficulty in the basic skills.

Identification of educational deficiencies is not enough. We must vigorously pursue the development, implementation and evaluation of remedial programs aimed at improving educational performance and achievement. This process will take several years and generally follow the steps of testing for basic skill deficiencies, diagnosis of causes of deficiencies development of remedial programs, and evaluation of impact of these programs.

For 1970–71, I am recommending the appropriation of $1 million for costs of testing program development and implementation of the testing effort in the five grades cited above.

C. Neighborhood education centers

Special consideration must be given to the problems of urban schools, and the proposed reforms that I have outlined will focus the attention of the state more directly on this issue. But special problems require special steps. One such problem is the prob-

lem of school dropouts requires totally new approaches to education.

In order to help redirect dropouts toward positive educational and career goals, I am proposing the establishment of a public nonprofit corporation to be known as Neighborhood Education Centers of Michigan, Inc. This corporation will combine the expertise and resources of state government, the education community, and private enterprise to establish in selected cities education centers that will work with school dropouts. These centers would be similar to the street academies initiated by the Urban Leagues in Detroit and elsewhere.

During the next several months funds from the private sector will be sought for the corporation. Meanwhile, I urge you to appropriate $100,000 for planning and implementation of the neighborhood education centers.

D. Community schools

The community school concept, extending the use of school facilities and the impact of school programs, has been adopted successfully by urban school districts throughout the nation.

This program, developed by private initiative, merits increased support from public sources. The Legislature has appropriated $1 million to be coupled with local funds for community school programs. I recommend that an additional $1 million be appropriated for this program during 1970–71.

E. Teacher incentives

The state should take the lead in experimenting with incentive pay systems for teachers. In order to begin moving in this area, I am proposing that the State Department of Education, in cooperation with the teacher organizations in the state, develop a four-year experimental program of incentive pay for teachers in four school districts.

The first year of the program would be devoted to planning the effort and to creating the administrative machinery. I recommend a $50,000 appropriation for this purpose.

F. Vocational education

The traditional approach to vocational education prevailing today is not adequate for the needs of students or the society.

Clearly, the impetus for a more relevant approach to preparing young people for the world of work best resides with the proposed regional education centers. The regional center in conjunction with local school districts and community colleges can marshall the required expertise and resources for vocational education from both the public and private sector.

I am optimistic that the Senate Education Committee, currently studying vocational education, will concur with this view. Moreover, I am sure that this study will provide considerable information about improving vocational education programs in the state.

If the revitalized vocational education program in Michigan is to succeed, there must be a correlation between students' skills and occupational needs. To assist in achieving this goal, I am proposing a vocational assessment and computer counseling system.

This system will provide current information about students' skills and interests and will relate this data to projected occupational needs in the state. Equally as important, this system will provide information to educators about the relevance of their occupational training efforts and will indicate directions for reforms in obsolete programs.

This vocational assessment and computer counseling program can be effective prior to the adoption of the regional center concept. Therefore, I recommend the establishment of this system in one large school district in the state. An appropriation of $150,000 will be needed in 1970–71 to develop the program.

G. Research and development

Far too little effort is being made in educational research and development.

The State has the primary responsibility to spearhead innovation in education. We are beginning to move slightly in this area with the statewide assessment program administered by the Department of Education.

I believe that the regional education centers will have an important responsibility in this area. Moreover, the Senate Education Committee will undoubtedly be submitting some recommendations as a result of its current telecommunications study.

In the meantime, I am exploring a variety of ways in which state government can cooperate with local school districts, universities and the private sector to improve the research and development capacity in our state's educational system.

H. Education Commission of the States

I recommend that Michigan become a member of the Education Commission of the States, the interstate compact for education.

Formed in 1966 and with a current membership of more than 40 states, the Commission has been effective in developing a working relationship and an exchange of experiences among governors, legislators, and educators for the development of new approaches to education in the states.

Michigan cannot afford to be isolated from new developments in education in other parts of the country. The Education Commission of the States is the most effective way to bring new ideas to our attention and give us an opportunity to share our ideas with others. The annual membership fee for Michigan is $18,500. I believe this is a small price to pay for the benefits that would be opened by membership in the compact.

I. Migrant Programs

I will recommend programs to identify existing gaps in educational services to Spanish-speaking students, including migrants, and develop programs to meet these needs. My Migrant Labor Task Force is drafting recommendations.

STATE REORGANIZATION

The pursuit of excellence often requires a willingness to change. We need basic structural changes if we are to achieve not only excellence, but also adequacy, in education.

I believe strongly that the state must more adequately fulfill its constitutional responsibility for education in Michigan. I question seriously whether our existing cumbersome state structure is capable of effectively discharging increased responsibility, when it has proved inadequate for its existing tasks.

We must have substantially increased performance accountability to the people through their representatives—the Governor and the Legislature—than we have at present. Leadership must replace confusion and the public spectacle that has characterized our system in recent years and recent days.

The best means, in my judgment, to establish accountability and focus leadership is through a State Director of Education, in place of the existing board and superintendent mechanism. The Director should be appointed by the Governor with the advice and consent of the Senate and qualifications for the Director must be spelled out in law so there will be no chance of a purely political appointment. I propose a constitutional amendment to accomplish the change in structure, which should be voted upon by the people in November of 1970.

At the same time I believe that special mechanisms are needed in education to insure broad representation of many diverse elements in policy making. In no way am I proposing a monolithic structure for education, as will be clear from my specific proposals.

REGIONAL

Next, I believe that our existing system of 60 intermediate school districts must be replaced by 10 to 15 regions. These regions, instead of floating in semi-autonomous limbo between the state and local districts as do present intermediate districts, should be treated as administrative units of state government.

They should be assigned important operational duties in special and vocational-technical education. We cannot do the job we need to do for children with their special needs unless we are organized on a scale that will produce effective programs in these areas.

All we know about modern business techniques and technology teaches us that important improvements can be made in various educational service areas, if they are organized on a regional basis. Transportation, central purchasing, data processing, other business services, budget review, and educational media lend themselves to effective treatment on a regional basis.

The legislation I propose for regional organization will lay the groundwork for achievement of these objectives. It should be viewed in that light. It is the first necessary step to a sound regional approach, with the details of specific regional programs to be worked out in subsequent legislative sessions.

Specifically, the bill provides a method for establishing regional boundaries, assigns functions and duties to the regions, outlines for their organizational structure, and fixes the time schedule for implementation.

First, establishing regional boundaries is a delicate and important task, and one which requires a great deal of careful deliberation. I propose that a boundary commission be created, and that within legislative guidelines it be empowered to recommend the precise boundaries to the Legislature. The Commission should report on or before March 1, 1970 and the Legislature should then have 30 days to consider the report. If not rejected within that period, the report should stand as law.

Second, specific functions and duties should be assigned to the regions in the areas I have mentioned. Planning should begin immediately, so that detailed legislation in each of the functional areas can be passed and implemented in the next two legislative sessions, with the regions fully operational by July, 1972.

Third, great care must be exercised in the organizational structure of the regions to insure that they are truly responsive to local needs as well as to state responsibilities. I, therefore, propose that each region have a central regional board composed of representatives selected by the school boards of the constituent districts, and that these representatives each have voting power on the Board in proportion to the pupil population of the constituent district.

I propose the regional board have veto power over the selection of regional director, and power to create and establish procedures for Advisory Boards in functional program areas, and to advise the regional director on execution of regional program responsibilities. To insure accountability to statewide policies, I propose that the regional director be appointed by the state director, subject to veto by the regional board, that he be the chief executive of the region, that his qualifications be carefully spelled out in legislation, and that he and all other regional employees be members of the state classified service.

I propose that the regional structure be established as soon as possible after the election in 1970 and that in the interim period, planning for implementation move forward under the direction of an Educational Regional Planning Commission.

LOCAL REORGANIZATION

At the local level we have need for further reorganization and consolidation, if we are to have districts which can offer students the kind of comprehensive program necessary to

prepare them for modern life. We now have over 300 districts which are either too small to operate comprehensive programs or which operate less than a K through 12 program. These should be merged into larger units.

The bill I propose in this area sets forth the criteria which should be used in achieving consolidation. Principally it would mandate a minimum size of 2,000 pupils, adjusted for population trends and distances students must travel.

In addition, the bill makes clear that every effort should be made to achieve consolidation within the framework of state criteria, through voluntary local initiative. My proposals concerning a statewide property tax for school operations should make the voluntary process more fruitful, as a chief obstacle in the past to consolidation has been the differing financial burden of neighboring school districts. In those few cases where voluntary approaches fail, I propose there be a hearing process which could result in orders mandating the essential consolidation.

STATEWIDE PROPERTY TAX

One of the keys to a fundamental reform is an adequate and equitable revenue base. We now raise our money in a most inequitable manner, with the amounts people pay in support of education varying tremendously in various parts of the state. The reason for this is that half of our money for operation of our education system is raised locally from local taxes on property.

Most persons who have studied this system condemn its gross unfairness. Districts with low state equalized values must make tremendous tax rate efforts to raise small sums while other districts, sometimes because of the presence of industrial-commercial property, can raise larger sums with considerably less of an effort.

Dr. James B. Conant, in his monumental study of education has said, in effect, that the only way to improve local decision-making on issues of educational strategies is to divorce such strategies from consideration of local taxes. Dr. Conant also has pointed out that when the local district is impoverished, or has exhausted most of its financing responsibilities, its local options, though considerable in theory, are extremely limited in practice.

We must reduce the reliance of the education system on the property tax and we must devise a statewide property tax system to create a fair and equitable system of taxation.

I propose a constitutional amendment which all enable the Legislature to impose a statewide property tax, in lieu of local property taxes, for the operation of schools. The initial maximum permitted statewide rate would be 16 mills (8 mills below the present state average) and present maximums in the Constitution on local taxes would be reduced correspondingly. In subsequent years, the tax imposed would not be permitted to exceed that necessary to produce the same percentage contribution to state expenditures for schools as that contributed by the 16-mill levy in the first year. This would permit property tax relief in the amount of $300 million to $400 million and would reduce the reliance on the property tax for operations from the present average of 24 mills to a maximum of 16 mills. This would mean relief for 92.6 per cent of the property taxpayers.

Such a statewide tax can be administered through the existing tax structure with a minimum of effort.

Fairness in property taxes must also be insured by greater uniformity of assessment practices statewide. I will prepare detailed legislation in January to cope with this problem.

At the same time, however, I believe that local communities must have the opportunity to enrich their programs beyond the level provided by state support. We should not cut off local creativity and initiative. We must insure equity between school districts, so that local effort, not a district's wealth, is recognized and we must make certain that local money goes, in fact, for enrichment programs.

To do this, I propose that local districts have the authority to raise up to 3 mills over and above the statewide maximum, that the state allow each district a yield from such tax as though each district had a state equalized value of $30,000 per child, and that the types of enrichment programs—such as better utilization of school facilities, broadened curricula, programs for gifted or underachieving students—be carefully spelled out, so that the money thus raised can go only for such programs.

Such a program at the 3-mill level with state support would provide a statewide enrichment fund of over $200 million, if all local districts participated.

DEVELOPMENT OF EDUCATIONAL PROGRAMS AND PRIORITIES

The creation of a statewide property tax also gives us the opportunity to strengthen the local school districts in their responsibilities for operation of local education programs. Present preoccupation with finance and revenue raising has distracted many local boards from their primary duty of determining program needs and assuring implementation of quality educational programs.

Instead, the boards must devote their main energies to attempting to deal with a situation beyond their control. They have no control over revenue raising and the collective bargaining process has left them with little control over spending. We must help the local districts to do the job of education by removing the frustrations accompanying instability of income and inability to allocate available resources.

I believe deeply in effective local control over the quality of education. This control can only be achieved when the local districts are free to concentrate on educational attainment of their pupils, undistracted by impending financial crises beyond their power to control or impede.

I propose to replace the existing cumbersome and inequitable system of state aid formulas and local revenues with a management process which will require response to guidelines for development of budgets and programs directed to meet our pressing educational needs. Under this approach, the allocation of our available money can be made on a more rational and equitable basis, and programs can be more responsive to actual needs.

My proposed legislation in this area is enabling legislation, describing the planning mechanism and the types of budgetary guidelines that should be introduced. It is designed to outline a process which should begin now, be in full operation by March 1971, in order to have appropriations approved in time for the beginning of the 1972–73 fiscal year.

Obviously, the first thing needed is to agree on the process itself and the kinds of factors that must be taken into account in order for the system to be fair and to work.

I propose that spending responsibility remain largely a local district policy matter, but that all operational spending be divided into two broad categories—professional-related costs and overhead costs—with the state through the budget process determining the maximum amount that can be spent by the local district for these two categories.

In order to measure the amounts the state should appropriate for each district for these two ctaegories, guidelines should be developed reflecting the professional-pupil ratio which the state will support. This ratio should be adjusted upward for those districts with severe underachievement programs, a base level salary support, varied perhaps by region and by the training and experience of various professionals. Overhead should be determined as a percentage of professional costs.

The budgets would be prepared by the districts, within the guidelines, with ample provision for dissent, and with room to make special program requests. These budegts would be reviewed at the regional and state level, subject to procedural safeguards to protect local districts from arbitrary decisions. Ultimately, these budgets, along with regional and state budgets, would be submitted to the Legislature as part of the Governor's budget proposals. The guidelines would then be subject to legislative review and action.

An accompanying accounting system would enable program studies to be made to determine effectiveness of spending patterns statewide.

At the same time, the local district would be free within the gross amounts appropriated by category to develop the most effective education programs. The local district board would determine curricula, conduct teacher negotiations, supervise personnel, structure its teaching force, and make educational policy decisions.

TAXATION

To pay for the greater costs that will come with a higher quality education, and to spread the tax costs more equitably, I propose that during the fall session of the Legislature you take the following action:

(1) Increase the cigarette tax by 5¢, effective January 1, 1970. This will provide an estimated additional $18 million for the second half of the current fiscal year and an estimated $45 million in fiscal year 1970–71. It will bring Michigan cigarette taxes into line with those of neighboring states.

(2) Eliminate the property tax credits on the state income tax due in April 1971. This will yield about $116 million. Property tax credit reimbursements due or to be due property owners on their 1969 returns due in April 1970, will be paid by the State as provided under existing law.

If the people approve the Constitutional amendment providing property tax relief, property taxes would be reduced, effective December 1, 1971, for school operating purposes. Amount of the total reduction would vary from about $300 million to about $400 million, depending upon the state equalized valuation and average levy for operating purposes at that time. Taxpayers who would benefit most would be those who had been paying most. If the amendment does not pass, there would have to be a modest tax increase to pay for additional costs of further educational improvements.

Assuming that the property tax reduction amendment passes, there would have to be corresponding tax increases to make up the revenue loss and provide additional amounts needed.

Because the amendment will not be voted upon until November of 1970, it is not my intention to propose any new revenue measures other than already mentioned either this year or the next session beginning in January.

Assuming passage of the amendment, there would have to be substantial new revenue from the income tax, or a combination of revenue sources. By way of example, if income tax were the only source, budget projections indicate that in 1971, the personal income tax would increase by 1.5% (from 2.6% to 4.1%); the corporate income tax by 2.1% (from 5.6% to 7.7%); and the financial institutions tax by 4% (from 7% to 11%).

In financing better education, however, we must do much more than look for new sources of revenue. We must close tax loopholes that provide unfair advantages. We must constantly examine and re-examine all state spending to eliminate waste and duplication wherever it occurs. We must examine and re-examine our priorities.

TRENDS

Although state financing of local education may seem to some a radical departure from existing practices, the national trend is in that direction. In Hawaii, Alaska, Delaware and North Carolina, state support ranges from 70 to nearly 100 per cent. In 21 other states, it exceeds 50%. A trend is indicated by the fact that in 1940, only nine states were above the 50% support line.

Neither is the idea of a Governor-appointed Director of Education revolutionary in nature. This is now the case in four states, as compared to eight states which now operate on the present Michigan system. In 21 states, the Superintendent of Public Instruction is elected through the political system—a process that Michigan abandoned with the 1963 Constitution. In 15 states, the Superintendent is appointed by a State Board of Education, which is, itself, appointed by the Governor. In one state—New York—the Director of Education is appointed by the Legislature.

CONCLUSION

In my special message to the Legislature on Education, in April, I outlined the major problems facing Michigan because of the inadequate, inequitable and antiquated structure we have for operating and financing our schools. I said that collectively these problems add up to an educational crisis in Michigan, and that if we failed to move toward educational reform intelligently in the very near future, the crisis would become an educational disaster.

Evidence of this mounting crisis is upon us.

It is evident in the loss of public confidence in the State Board of Education.

It is evident in strike-torn school districts.

It is evident in the collective bargaining whipsaw effects that are forcing too many districts into deficit financing.

It is evident in the large number of unresolved contract disputes.

It is evident in student disorders.

It is evident, above all, in the growing public dissatisfaction with our educational processes.

We must move now, and we must move with boldness.

We will not achieve total educational reform with only token responses.

I believe that the plan I am submitting to you is a reasonable and responsible response to these problems.

The proposals are the result of several months of research, study, and debate. During these months we have consulted hundreds of persons, including members of the Legislature.

The recommendations are mine, and I intend to fight for them. If Legislative debate results in further improvements, I will welcome these improvements.

This plan is very much interrelated. As with any plan, it is subject to some refinement. But I must caution you that by adopting some parts, while omitting others, you could weaken overall effectiveness of the plan. I must also caution against adopting changes that would adversely affect other parts of the package, and thus the thrust of total educational reform.

I will welcome constructive criticism by any Legislator, but, in my judgment, it is incumbent upon any legislator who criticizes to offer a better solution. Blind criticism will not be productive. It will contribute only to confusion—not to conclusion. Compromises which detract from our overall objectives, to any extent, must be your responsibility.

If you have a better idea, I welcome it. But we need more than criticism; we need constructive alternatives. It is one thing to theorize, to analyze, and to criticize. Now we must act. We must move from theory to practice with specific programs.

How we move now is mainly up to you.

In your debate, and in your voting, I hope you will act as though Michigan's future depends on the outcome.

It does.

NOW IT IS THE POLAR BEAR

Mr. NELSON. Mr. President, an article published in Sunday's Washington Post reported that unexpectedly high concentrations of DDT residues have been found in polar bears in a remote Arctic region of Canada.

The polar bear is not the first species of wildlife living in remote areas with little or no direct contact to man that has accumulated high levels of DDT residues. Living creatures around the world have been reached by the drift of pesticide residues through the air, soil, and water. The reindeer of Alaska, the penguin of the Antarctic, and the petrel of Bermuda have each been found to be contaminated by the spread of pesticides through our environment.

High levels of pesticide residues in wildlife lower down on the food chain have proved disastrous. Many species of fish and birds, including the American bald eagle, are now on the endangered species list because pesticides have interfered with their reproductive systems and threatened their survival. Like man, the polar bear is at the top of the food pyramid. Yet the use of hard pesticides continues, largely uncontrolled with the exception of steps taken by progressive States, such as Arizona, Michigan, California, and Wisconsin.

I ask unanimous consent that the Post article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIGH CONCENTRATIONS OF DDT FOUND IN NORTHERN CANADA'S POLAR BEARS

EDMONTON, ALTA.—Preliminary testing of Canada's polar bear population in the high Arctic has disclosed unexpectedly high concentrations of DDT residues in some animals, the Canadian Tundra Conference has been told.

Charles J. Jonkel of the Canadian Wildlife Service in Ottawa said the insecticide concentrations were found in fat samples taken from polar bears killed in a remote Arctic region.

"We are now selecting groups of samples for further analyses from five regions of the Canadian Arctic," Dr. Jonkel told delegates from all over the world, assembled here for the three-day conference on productivity and conservation in northern circumpolar lands.

"The surprising discovery of high insecticide levels in fat tissue of polar bears deserves special attention," he said. "We plan to determine these levels for . . . different areas of the Arctic by sampling every year.

"As polar bears are at the top of a food pyramid, insecticide residues may eventually reach even higher levels in this species.

"Polar bears are of economic importance to our Eskimos and Indian hunters; we seem to have most of the world's polar bears; and the range of the species includes a major portion of the Canadian Arctic."

TESTIMONY OF SENATOR GOODELL, SENATOR JAVITS, AND MAYOR LINDSAY BEFORE THE SPECIAL SUBCOMMITTEE ON ALCOHOL AND NARCOTICS

Mr. GOODELL. Mr. President, I recently testified before the Special Subcommittee on Alcohol and Narcotics when it held hearings in New York City. My distinguished colleague, the senior Senator from New York (Mr. JAVITS), and the distinguished mayor of the city of New York, the Honorable John V. Lindsay, also testified on the critical nature of the heroin problem now victimizing the people of New York.

I discussed with the subcommittee the need to commit the Federal Government to a major role in helping to reduce and control heroin addiction and drug abuse in that city and in the nation.

I also made other recommendations to the subcommittee, many of which are included as provisions of a bill which I recently introduced, S. 2921, the Drug Abuse Services and Marihuana Study Act of 1969. Senator JAVITS and eight others joined me in cosponsoring that measure, which addresses itself to many of the problems raised so effectively by the Senator from Iowa (Mr. HUGHES) and his distinguished subcommittee.

Mr. President, I ask unanimous consent that the text of my statement to the subcommittee and the statements of Senator JAVITS and Mayor Lindsay be printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CHARLES E. GOODELL BEFORE THE SPECIAL SUBCOMMITTEE ON ALCOHOLISM AND NARCOTICS, SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, OCTOBER 2, 1969

Mr. Chairman; Members of the Committee: it is a pleasure to appear before this Subcommittee today. In New York City, there is an area in Harlem called "the fix market." In that market hard drugs are bought and sold in large volume in broad daylight and throughout the night.

It could be in Bedford-Stuyvesant, or in the South Bronx or in Chicago, Los Angeles or Washington, D.C.

It could be in any one of a number of large American cities. That market is made up of people who form the nucleus of the culture of poverty in America, and who are imprisoned in the slavery of narcotics addiction.

Their desperate and hopeless lives revolve around the chemical of heroin and it is their crutch, their reason for living, and the catalyst of crime and fear, which victimizes their own communities and brutalizes their own families and neighbors.

Narcotic addiction and drug abuse pose a serious danger to the health and well being of millions of Americans. They pose a social and law enforcement problem of the highest magnitude for the City of New York.

Here narcotics addiction has reached the proportions of an epidemic.

Here live one half—perhaps 100,000 persons—of all the narcotic addicts in the nation.

Here one-half of all street crimes and burglaries are committed by addicts to support a habit.

Here the average age of the narcotic addict is 24—30 out of every 100 are under the age of 21.

Here 90% of all narcotic addicts have a prior arrest record.

Here the average addict spends approximately $30 a day for drugs.

Here during the month of June, 40 teenagers died from overdoses of heroin. There were 730 known heroin deaths in New York in 1968. In 1969, it is estimated that 900 will die from such overdoses.

The high schools and junior high schools in many sections of our city are becoming drug markets. Pushers sell habit forming

drugs cheap or give them away in order to get young children hooked. In some schools, as many as one-third of the students are probably well on their way to becoming addicts.

Drugs are a major source of black resentment against whites. The black community knows that it is white racketeers who import and wholesale the stuff, making hundreds of millions of dollars a year. Black citizens see every day the failures of government to stop the traffic. They feel they are the victims of this enforcement failure.

Social programs to alleviate poverty in the ghettos have little chance to succeed in a drug-infested environment.

True, stopping the drug racket is by no means enough to solve the problems of New York's slums. Obviously, we must expand our efforts to create new jobs, improve the schools, rehabilitate the dilapidated housing and reform the outdated welfare system.

But how can even the best educational program work when heroin is being peddled openly in the schools? How can even the best job programs for the hard-core unemployed succeed, when many of the jobless are addicts unable to work? Trying to improve the social environment of the slums without stopping the drug traffic is, as one resident of Harlem told me, "like feeding a man with a tapeworm."

Mr. Chairman, drug addiction is a problem for which there is no clear solution; in fact, there may be as many solutions to drug dependency as there are drug users. The problem is compounded by the fact that it no longer touches only the inner city, but is spreading to youth from urban to suburban middle income families.

In public debate its parameters change depending upon the perspective brought to it by various segments of our society. Regardless of point of view, however, we must all recognize that there are bound up in the drug problem complex questions of psychology, sociology, and physiology.

We must recognize that it is clouded by misinformation and misconception. These persistent misconceptions range all the way from the idea that once a person becomes addicted to heroin he is beyond all hope of rehabilitation and productive reintegration into our society, to the ridiculous notion that one injection of heroin causes addiction.

We must recognize that there is virtually no public recognition that drug abuse may reflect serious and deep rooted personality disorders founded upon the inability of the addict to cope with his existence.

Therefore, we cannot define drug dependency in medical or social terms alone, but must approach the problem through the knowledge and insights of several disciplines.

We cannot fail to recognize that the ever-increasing incidence of drug abuse throughout our modern American society raises deep and disturbing questions about the kinds of environments people have created for themselves. It calls into question fundamental issues concerning the quality and purpose of life in America.

Mr. Chairman, the concern and the distress of the American people over this issue is well known. The long standing failure of the federal government to respond to that concern is unconscionable and must now be remedied. We must adopt new measures aimed at creating a more effective law enforcement capability to reduce the supply of hard narcotics. Simultaneously, we must support a serious, fully funded program of prevention and rehabilitation to reduce the demand.

Last year, the federal government spent $26 million to investigate and control illegal drug traffic. This is by far the smallest budget of any federal crime control effort. It is less than what the federal government spends on enforcing alcohol and tobacco regulations.

The amount sometimes seized in a single arrest—about 250 pounds of heroin—is worth as much as the $26 million the federal government spends on narcotics enforcement each year. Several hundred times this amount of heroin is brought into the country illegally each year.

The amount the federal government spends on narcotics enforcement is less than one-tenth of the amount that organized crime makes on this traffic. It is a tiny fraction of what society pays for crimes addicts commit.

The federal government has done virtually nothing to support the state and local prevention and treatment programs.

The Bureau of Narcotics and Dangerous Drugs in the Justice Department now has about 640 investigative agents. About 20% work in the New York area.

The Customs Bureau has about 320 customs agents who serve as top-echelon criminal investigators. About 20% are in the New York area. The Bureau also has about 490 Customs Port investigators and enforcement officers performing investigative functions (other than routine customs inspections) at airports, harbors, and border crossings. About 40% of these are in New York.

A major increase in the number of these investigative agents is essential.

I have long proposed that we double the number of investigative agents of the Bureau of Narcotics and Dangerous Drugs by July 1971. This would raise the number of these agents to over 1,200. The cost of this increase will be about $4 million a year.

I have long proposed that we triple the number of customs agents of the Customs Bureau by July 1971. This would raise the number of customs agents to over 900. The cost of this increase would be about $5 million a year.

I have also recommended that we provide an increase in the number of Customs Port investigators and enforcement officers needed to complement the proposed increase in customs agents. I estimate that this would require doubling the number of these officers. These improvements in the federal narcotics enforcement capability must be adopted if we are to reduce the supply of heroin in New York City.

I believe that the greatest challenge facing those who are concerned about the narcotic problems is in the area of prevention and rehabilitation of drug addicts and drug abusers.

In the past, public health programs have responded in the short run by providing temporary channels of escape from the destructive environments of addicts. They have failed to recognize that narcotic addiction most frequently occurs among individuals who present patterns of behavior which are inconsistent with successful living in our society.

Therefore, any effective rehabilitation program must provide services which seek to overcome the initial resistance and helplessness of the addict, to cure him of psysiological drug dependence and to prepare him for a stable and productive life in his own community.

It is crucial that such a program seek to establish positive attitudes in the addict and to help him to develop a capacity for responsible, independent functioning in our highly competitive and demanding society.

It is with these objectives in mind, that I recently introduced in the Senate the "Drug Abuse Services and Marihuana Study Act of 1969."

The bill would provide a five year $350 million program to assist states, units of local government and non-profit, private organizations in the prevention and treatment of drug abuse and the rehabilitation of drug addicts.

It would provide for a comprehensive program within each state designed to meet the costs of constructing, equipping, and operating treatment and rehabilitation facilities, including post-hospitalization and after care neighborhood rehabilitation centers for narcotic addicts.

Provision is made for the recruitment, training and utilization of "Community Narcotic Prevention and Rehabilitation Officers." They would serve with and under the direction of professional medical, psychiatric and social welfare personnel in narcotic addiction treatment and rehabilitation programs. I believe that it has been demonstrated beyond question that former addicts can and must play a major role in narcotic rehabilitation programs of all kinds.

The bill will also authorize the funding of programs for the prevention and treatment of drug abuse and the rehabilitation of narcotic addicts in correctional and penal institutions. In cooperation with schools, law enforcement agencies, courts and other public and private agencies special efforts should be made to assist such programs aimed at juveniles, youth offenders and young adults.

Any comprehensive program of this type must also provide services for outpatient counseling of former narcotic addicts to include employment, welfare, legal, education and referral assistance, in cooperation and coordination with the welfare and rehabilitation departments of local political subdivisions within the State.

It must, in addition, establish enlightened, comprehensive programs of public education about the prevention of drug abuse and narcotic addiction. My bill would commit the federal government to a major role in meeting these pressing needs.

The use and abuse of marihuana and the stringent criminal penalties applicable to violations of laws governing its possession and use present a special problem.

Some authorities say that 50 percent of college students have tried marihuana at least once. Dr. James L. Goddard, former head of the Food and Drug Administration, has stated that 400,000 Americans may be using it regularly. We must clear away the haze of misconception and establish, once and for all, the facts about the dangers inherent to marihuana use and abuse.

The Marihuana Study Commission created in Title II of my bill would be composed only of persons with experience in the medical, mental health and social problems attendant to marihuana use. It will be located in the Office of the Assistant Secretary of Health, Education and Welfare for Health and Scientific Affairs. It would report in eighteen months on most aspects of marihuana use and specifically on the physiological and psychological effects of infrequent, temporary and longterm marihauna use.

One of the most effective means of dealing with the problems of drug abuse and narcotic addiction is the Neighborhood Service Center. Two weeks ago I had the pleasure of visiting one such facility on New York's lower east side. The Center, operated under the direction of the New York City Addiction Services Agency is doing an outstanding job. It is a concrete example of dedicated and effective effort, and proof that rehabilitation of hard-core narcotic addicts is possible.

This program utilizes staffing by indigenous non-professionals, a mental health orientation, and the joining of service and community action in a carefully phased sequence.

Two years ago, New York State and its Narcotic Addiction Control Commission made an unprecedented groundbreaking commitment to the solutions of the narcotics problem in this State. It has made progress to achieve that goal. The encouraging and imaginative efforts of the Addiction Services Agency have resulted in new hope for addicts who heretofore were without hope. The resourcefulness demonstrated by many, nonprofit, private organizations have also contributed much in our recent efforts to control drug abuse. All of these activities underscore the need for the federal government to take up the responsibilities it has long evaded. Organizations such as these cannot

survive and go forward without our broad financial assistance. As I have previously indicated, they also desperately need our help on the law enforcement front.

Hopefully, Mr. Chairman, the battle is on. There is a growing national awareness of the need for a massive community education program directed toward the general public, the professional community and, most important, potential addicts among our youth. We at the federal level must also play a more significant role in this area.

But the most crucial need today is for adequate funding of rehabilitation and prevention programs, and the acquisition of large number of professional staff personnel. I believe that the use of former addicts in such programs is not only useful, but necessary. However, they cannot take the place of professional staff personnel at all levels of the rehabilitation process.

The salvation of the damned—the addict imprisoned in his own personality and environment—may not be possible in all or even most cases. But we have made a promising beginning. We have demonstrated that prevention and rehabilitation can work. We must continue to learn how to assist our people to regain their freedom, and to prevent others from going down a road fraught with agony and degradation.

STATEMENT OF SENATOR JACOB K. JAVITS BEFORE THE SPECIAL SUBCOMMITTEE ON ALCOHOLISM AND NARCOTICS, SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, OCTOBER 2, 1969

The special subcommittee on Alcoholism and Narcotics of the Labor and Public Welfare Committee has recently concluded the first round of hearings on what has become a matter of much anxiety and yet, paradoxically, little action by our nation—the problem of narcotics and drug abuse. The Committee, of which I am ranking minority member, has heard much distressing testimony by researchers and physicians, former addicts and present drug users. An all too clear picture has emerged. I would like to share the details of that picture with you today and make some recommendations.

The National Institute of Mental Health estimates there are 100,000–125,000 active narcotics abusers in the United States. (New York City alone has records of some 42,000 heroin addicts but that does not include addicts not in prison nor in voluntary treatment.) The total number of non-narcotic drug abusers, including those addicted or habituated to marihuana, LSD, sedatives, stimulants, and related drugs, and certain tranquilizers is estimated at between 250,000 and 500,000 persons nationally. The number of juveniles and adults who have used marihuana at least once is conservatively estimated between 8,000,000 and 12,000,000.

These, then, are the statistics. Few of us, however, have attempted to get beyond the abstract figures so often cited to understand the problems of the individuals who comprise these numbers. We are aware that narcotics addiction and drug abuse is on the increase. We are aware that it now touches every sector of our society, from the dimly lit corridors of the urban slums to the shopping-center parking lots of suburban communities. We can define the costs, socially or economically, in terms of the maintenance of an elaborate apparatus of jails, courts and clinics, through which pass the identified drug users. We can identify the human toll in terms of the auto injuries, aggressive crimes, ruined lives (and families) and deaths brought on by drug experimentation and addiction. This toll has been set by the Director of the National Institute of Mental Health, Dr. Yolles, in the range of $2- to $3-billion yearly. But there has been a strangely fundamental and stubborn unwillingness by our society to investigate the measures we have taken to cure this problem and to offer real help to those involved in it. Instead we seem satisfied to continue quoting the figures and turning our backs on their implications.

Perhaps this is because we are basically a society of drug users—albeit legal drug users—and we do not intend to do anything that might alter our own "habit." Each year, we produce and consume more varied, more potent and great quantities of mind-altering chemicals, including such medical preparations as tranquilizers and sedatives; such over-the-counter remedies such as aspirin, mild stimulants, pseudo-tranquilizers; and such approved—yet deadly when taken intemperately—social substances such as alcohol and tobacco. Drug abuse today can be many things. It can be the narcotics addict injecting his daily "bag" of heroin, the methedrine-user high on "speed," the college student "taking a trip" on LSD, the teenager smoking "pot," the 12-year old sniffing airplane glue. Drug abuse can also be the adult starting the day with a pill for a "pick-me-up," having several drinks at lunch to "unwind" and using a barbituate at night to "knock him out." We are living in a nervous, confusing and restless age, and we increasingly turn to these drugs to ease discomfort, to combat insecurity, to escape, to achieve a transient euphoria.

In this respect, the impoverished ghetto-born dope addict who steals to buy his escape—heroin—is related to the affluent suburban executive who is functioning, achieving and outwardly successful but who also is a heavy drinker. Thus it is apparent that many people abusing drugs have many different reasons for initiating drug use and different patterns of drug use. The fact that the problem of drug abuse is spreading among the young and the affluent is, therefore, not surprising. But most adults stubbornly refuse to empathize with those drug addicts and young experimenters, hypocritically viewing their own practices as separate from the "drug scene." Yet, as Weldon H. Smith, Coordinator of California Narcotic Programs stated, "It is a matter of the degree of pain that determines what drug you use and how much. And the drug that offers the ultimate in surcease and escape from pain, for those probably hurting the most . . . is heroin."

This attitude of avoidance on the part of our citizenry is the key to the inadequacy of our Federal and local efforts to meet the growing problem of drug abuse. Our primary reaction has been to punish the easily-labeled drug "offender" with strict prison terms, offering too little distinction between the felonious drug pusher and the youthful experimenter, and little understanding of the psychological problem of the latter. It is no surprise that those dependent on drugs rarely are cured of their habit through punishment. More often, they return to outside life more cynical, more insecure, and—due to the traffic of narcotics within the penal system—often more knowledgeable in the sale and use of narcotics than before they began serving their terms.

The more important target of research, after-care treatment, and rehabilitation for these addicts has been grossly under-funded by the Government. The thrust of Federal activities takes the form of financial assistance to the National Institute of Mental Health to stimulate support for the development of community-based programs for treatment of addicts on a community level. The total expenditures for the NIMH narcotic and dangerous drug program, including Federal facilities at Fort Worth and Lexington, amounts to $35,000,000, a fantastically small pittance in comparison to the scope and gravity of the problem in a complex and myth-ridden field. To quote Dr. Richard Clum, author of *Drugs and Society*, "Drug problem prevention has not been able to compete successfully for priorities in a nation beset with social needs and international policy implementation costs."

There is a great deal we do not know about narcotics. But we do know that present Federal programs are inadequate to meet this problem. We recommend and enact new categorical programs and urge more rigid application of criminal sanctions against narcotics addicts. But, in fact, we devote pitifully small national resources to a problem which extracts enormous costs from our society in terms of broken lives, urban crime, community decay, and fear.

We do not need new categorical programs—we have them—nor are more stringent penalties against narcotics addicts the answer.

What is required is a Federal commitment—adequately funded—to state, local and private programs of research, experimentation, and demonstration in narcotics prevention; and for rehabilitation and after-care services.

Broad-ranging residential rehabilitation programs (half-way houses) at the state and local level are among those which should receive expanded Federal support.

Most addicts are unable to cope with the stresses of their environment, and increased and expanded residential facilities are needed for many of them. Richard Atkinson, Director of the Washington, D.C., Drug Addiction Treatment and Rehabilitation Center has told our committee: "Basically, real therapy must be a process wherein an addict can be confronted with his own elaborate and extensive system of defenses and help him to see himself. In the long tedious process of self-realization he must learn to cope with his own internal feelings and frustrations that none of us are immune from."

This Federal commitment should include expanded and more intelligent law enforcement.

Aggressive law enforcement by Federal authorities is essential. But, enforcement efforts should be particularly directed at disrupting the flow of dangerous drugs into and within the country and at destroying the powerful elements of organized crime which feed upon and profit from the drug traffic. But we will be deluding ourselves if we believe that aggressive law enforcement alone against the individual narcotics user can contend with a disruptive community problem which takes root in emotional instability, psychic disorder, and social breakdown.

Federal support for education into the attraction and danger of addiction must be increased. Young people must understand better than they do the dangerous potential of mind-altering substances and how so many of our young people use them to "act out" their particular fantasies, psychological defects and character disorders.

Further research, too, is needed to elucidate the effects of use of the drug which has probably generated the most popularity and concern in our society—marihuana.

In recent years, there has been a dramatic and continuing increase in the smoking of marihuana or "pot," particularly among urban and suburban youth. It is estimated that more than 50 percent of our college students and 20 to 40 percent of our high school students are using or have experimented with the drug. About $100,000,000 a year is spent illegally on marihuana. In the past year or two, use has spread to junior high and grade school students. The substance, currently classified as a dangerous narcotic by Federal law, is viewed as a non-addicting, relatively mild intoxicant by many young people who claim to use it as a recreational drug, much in the manner their parents enjoy alcohol. There is as yet no hard evidence that there is permanent, physical damage caused by this illegal drug, as there is for other currently legalized drugs. Nor is there as yet any proof that marihuana smoking leads inevitably to addiction to, experimentation with, or use of other drugs. Because of these conclusions, and because of the acknowledged failure of penal laws to suppress the incidence of drug use, there has been widespread student demand to legalize the sale and possession of marihuana.

Before any conclusion is reached as to whether marihuana is or is not a dangerous drug, we must focus on research to provide basic scientific data on acute and chronic effects. Only if we obtain from such research affirmative scientific evidence that it is an innocuous drug can it be legalized. In the meantime, however, there is enough evidence to rationally reduce the penalties for possession and use as distinguished from pushing and sale.

Marihuana is not an opiate or narcotic. We must therefore seek a more just handling of its use by our disillusioned youth, who rightly cannot understand our drug-ridden society's confused morality on this issue. The increased use of marihuana in the presence of stringent laws prohibiting it makes it imperative that marihuana should be reclassified under our laws dealing with hallucinogens. At most, it should be controlled by the Drug Abuse Control Act, which provides less severe penalties for violations. Our courts also must become more flexible. Our judges should not only have full discretion to suspend sentence, but a full range of services should be available to the courts for diagnosis, counseling and treatment for drug abuse and narcotics addiction.

A sampling of Federal and State statutes concerning the use and possession of marihuana reveals a pattern of stringent repressant penalties. Our Federal laws impose a 2 to 10 year sentence for first offense for marihuana possession and a 5 to 20 year penalty for the sale of marihuana. In our own State—New York—we have a more enlightened approach to possession with a variegated penalty structure depending upon the amount of marihuana in the possession of the offender, while in California the minimum sentence for an offender without a prior conviction is 1 year with a maximum sentence of 10 years. In Texas the penalty for possession can be 2 years to life imprisonment. In Massachusetts, to be in the presence of marihuana without knowing it carries a 5-year penalty while oddly enough, to knowingly possess marihuana carries a maximum penalty of 3½ years.

Above all, it is essential to make a clear distinction between those who employ the drug, potentially harming themselves, and those who grossly profit from its illegal sale. I will introduce appropriate legislation to achieve this. We must consider, too, what the effect of legalizing marihuana would have on the vicious, destructive drug scene present in the nation's poorer areas in the present state of uncertainty about the effects of marihuana. Here total escape mechanisms have been more frequently seized upon in the face of what seems to many to be insurmountable problems of discrimination, victimization, and abject poverty. Larry Bear, Commissioner of the Addiction Services Agency of New York City, testified to our committee: "We should have to consider the negative effect of inundating these same communities with legal marihuana whose cannabinol content would certainly eventually qualify it as a serious hallucinogenic drug. With importation unrestricted, cannabinol content undertermined, individual users' characterological deficiencies unknowable, and advertising techniques freely available, legalization could literally send the ghettos up in smoke."

It is indeed unfortunate that our society has legally and socially permitted and promoted the use of substances for "recreation" which have proved to be far more dangerous than marihuana—particularly alcohol and tobacco. Their use strikes a tragic toll of death and bodily harm each year. But we cannot, as a just and pragmatic society, condone yet another such substance, no matter how widespread its incidence comes to be, until we really know about its effects.

But again, I must reiterate that law enforcement per se is not going to end the tragic occurrence of drug abuse in this country. We must, as a nation, acknowledge the complexity of drug problems, understanding that some are linked to mental and physical ill health, others to lack of information, some to overexposure or undercontrol of drug-using situations. We must in the end, come to understand the need for a shift in our values on this issue, and our blindness in the past to our own responsibility for inaction.

If we can reexamine our conduct, and begin to help those who desperately need our help, we will have succeeded in the first and most difficult step. For if we can show the alienated, those who view the establishment to be hypocritical and base, that society does care, then the need for escape would be far less. The work of our subcommittee is not over. We are considering here not only a health problem, not only an educational problem, but the very success of our society. And in considering the drug problem, we are striving for a society dedicated to the useful participation of all its citizens, and to respect for each individual within it.

TESTIMONY OF MAYOR JOHN V. LINDSAY BEFORE THE U.S. SENATE SUBCOMMITTEE ON ADDICTION AND ALCOHOLISM, OCTOBER 2, 1969

Thank you very much, Senator Hughes, Senator Goodell, and Senator Javits. I would like to thank you for bringing your hearings to our town. We are most appreciative of that. It shows almost for the first time an organized senatorial directive on the problem of narcotics and drug addiction, which we appreciate.

Our two senators from New York, Senator Goodell and Senator Javits in his long career, have shown in the Senate a constant concern and leadership on this whole subject.

Senator Javits was chiefly responsible for bringing VISTA aid and Teacher Corps staff into New York and it was Senator Javits who assisted in the development of the Bedford-Stuyvesant restoration effort. This project, in turn, led to the development of new methods in our program on methedone.

Senator Goodell has been energetic in his leadership in this area with the increasing interest and concern he has shown.

Senator Hughes, we would like to thank you for, even in your brief tenure in the Senate, demonstrating such a determination to get at the roots of narcotics addiction.

My testimony this morning will be chiefly on the subject of heroin. I do that for a very important reason. It is not to deemphasize the importance of other drugs or alcohol. This is of tremendous concern in every respect in our City of New York.

The reason I am concentrating on heroin is because our time is limited and I want to put first things first. Heroin is the drug which is responsible chiefly for the majority of crimes that strike terror into people's hearts and minds, street crime, muggings, breakings and enterings, burglaries. That's why I wish to concentrate on heroin today.

It is of immediate and prime concern, and indeed we don't have much time to deal with it.

My statement will be quite brief and then I shall ask Commissioner Larry Baehr, sitting on my right, who will make a very brief statement introducing our Addiction Services Agency program; he will describe it very briefly.

Then I will ask Mr. Irving Levine, who is sitting on my left, who is an ex-addict, to talk briefly of some of his experiences in the world of addiction and what it means in terms of crime and involvement.

And immediately after that, with the Chairman's permission and with the cooperation of the press, with no picture taking, I would like to bring up two police officers, one recently under cover and the other a sergeant who has worked for eighteen years in Harlem. They will speak on the subject of law enforcement and narcotics. They are not under cover at the present time, but for obvious reasons pictures and their names are to be avoided.

Well, the main thing I want to do today, Mr. Chairman, is to make a specific proposal, and that is a proposal for a partnership between New York City and the Federal Government that can bring heroin addiction under control within five years.

This is no slogan and it is no posture; that is a thing that can be done. We can bring heroin addiction under effective control within five years if we get the support we need from the Federal Government and what I ask you today is to make this five-year goal a specific deliberate national priority, as real as the landing of the men on the moon in this decade. It is in fact more basic than was the moon landing, for it is a priority not to demonstrate our power, our grandeur or our scientific capacity. It is a national priority aimed at the survival and renaissance of our cities and of New York City in particular.

If we can set a time limit to put a man on the moon, we ought to be able to set a time limit to put a man on his feet.

You will hear today about what narcotics addiction means in and to New York City. It can be put very simply.

Heroin addiction ravages New York; it fills our streets with terror, destroys thousands of families, totally degrades and brutalizes its victims, and those victims in turn, wreak fear on innocent citizens every hour of the day.

This poison feeds and bloats the masters of organized crime. It is a daily tangible system of systematic lawlessness and cruelty in our society. It is a sickening, humiliating scourge upon our country's greatest city and you will be told today something of what addiction costs New York City, of the one hundred thousand addicts who dwell here, of the fact that among those between 16 and 35, addiction is the largest single cause of accidental death.

But you will not hear the things this terror does to people. Not long ago a woman in a store in Harlem looked out onto the street and saw a girl, perhaps as old as twelve, being led down the street by an older man. Fearing a child molester, she rushed out into the street and protested.

The young girl looked at her coldly. "On your way, Mother," she said, "This is my customer." The girl was twelve; she was a prostitute so that her fourteen year old brother could support his heroin habit.

And there are too many such tragedies, too many who have given up on themselves because they have given up on us.

But we have not given up on these human beings. We have taken more steps than any other city in history, steps which I can detail for the record, but which I can sum up briefly.

We have more than doubled the Police Narcotics Bureau, so that it will have five hundred full-time officers working solely on breaking the back of the narcotic traffic. We have ordered every man on our 32,000-man police force to make narcotics offenses his highest priority.

We have launched borough commands in our narcotics rescue task forces to link local detective work with top police command personnel. We began our initiative on our federal-city task force with the cooperation of Attorney-General Mitchell and Police Commissioner Leary. That task force is now under way and we have begun the only municipal agency in America to deal exclusively with addiction and prevention.

That organization is the Addiction Services Agency headed by Commissioner Larry Allen Baehr.

Under the ASA, as it is called, which now operates fifty facilities in our city, more than 1,500 addicts are now receiving treatment linked to characterological self-improvement and more than two thousand youngsters,

parents and concerned citizens are involved each week in our ASA prevention program.

Further, we have started the largest methedone maintenance experiment in America, with the help of the Central Brooklyn Model Cities area, under which five thousand addicts can get help within five years on the street level.

Well, this is a vital part. It is more than any other city is doing, but it should be twenty times a greater effort. That is why I am here today, for the fact is that the Federal Government has a direct tangible role it must play in controlling addiction. At present, the Federal Government simply is not doing its job.

It is not enforcing its responsibility which is total and absolute in controlling international traffic. Opium and its derivative, heroin, does not grow in Brooklyn. It flows into this country from abroad at a staggering rate.

A Federal Government research and treatment program for 1970 simply does not exist. There is no coherent policy in this vital field and clearly no commitment. There are national institutes to study arthritis, allergies, eye disease and neurological disorders. There is none for addiction research. There is for research into new weapons and anthropolitical inquiries in Asia; there is not one penny available for addiction research.

The source of narcotics addiction clearly lies in the field of mental health of prospective addicts. Yet the total federal grant money nationwide to fight alcoholism and addiction from the community mental health program is $12 million.

There are up to one hundred thousand addicts in my city alone. Yet the entire Federal Government's hospital resources comprise two hospitals in the entire country treating fewer than a thousand patients at any one time.

That kind of effort makes a mockery of pledges to act. President Nixon said last July 14, "A new urgency and concerted national effort are needed at the federal level to begin to cope with this growing menace to the general welfare," but the deeds do not match the words.

New York City, which has increased its spending in the fight against narcotics tenfold within the last five years, is asking the Federal Government to put its resources where its rhetoric is and to help bring this problem under effective control by 1974.

How? There are five specific steps the Federal Government can take now to make a difference.

First. The New York City area needs an immediate minimum level of one thousand full time federal narcotics agents towards the ultimate goal of three thousand. This base has been supported unanimously by the five district attorneys of New York City who have been meeting with me on this subject. The five of them and myself, based upon the best evidence we have available, concluded that this minimum level is immediately needed in New York City and we think we are being conservative in our figures.

These men would guard the Ports, work at investigative efforts in narcotic traffic and work at nothing other than smashing this deadly cycle.

We must multiply the pitifully small force of federal agents overseas.

Two. We need help in effecting new international agreements in blocking the importation of heroin, bilateral treaties and the full force of foreign governments put to work to cut this dead at its root.

Third. We must have a real attack on organized crime, the key economic profiteer from narcotics poison.

Here in New York the U.S. Attorney, Robert Morganthau, has led in fighting this, but he must have help from Washington.

It is time we had a war on organized crime. The generals of the enemy are putting more money, men and equipment into this than we are. On those terms we cannot win.

Fourth. We must have a federal commitment to real research such as work to produce non-addictive blood agents, chemical antidotes and vaccines.

The Federal Government's influence and medical research are now at a peak. It would require nothing more than an act of will and legislation to direct a small portion of our research empire into addiction research.

Fifth. Federal coordination is vital. Today the Federal Government is like the marshal who jumped on his horse and rode off in all directions at once. Drug Administration officials and high-ranking administrators tell us the drug laws are irrational, while legislation is proposed by the administration to harden those irrationalities even further.

We need a single concentrated, coordinated strategy for addiction control.

We need one more thing: money. We can put a dollar figure on a program to treat every addict in America nationwide. It would take $600 million a year for a nationwide treatment and prevention program. About half of that, $300 million a year, would reach every addict in New York City, which holds half of the national addict population.

In other words, if you choose to make the control of heroin addicts a real national priority, it will cost $3 billion over the next five years, $1.5 billion for New York City alone.

Now that last figure is high. It is also, however, $500 million less than the cost overrun on the C–5–A cargo plane. One year of that New York City effort is a little more than four days of the cost of the war in Vietnam.

So it is for you to judge whether this is too much to ask. We know the kinds of programs that will really work. We know what an enormous difference the control of addiction will mean to New York City, cutting half of the crime away from our streets, stopping the spread of suspicion and fear, providing hope for something better among all our people, and we know that without money all of the Washington rhetoric about law and order is just some disagreeable joke on the people of New York City.

So I leave it in your hands. Is the salvation of America's greatest city a worthy national priority? Does it match a trip to the moon or a new bomber in importance? Is the city's soul a proper national priority? I believe it is and I commend it to the President and the Congress as one worthy of their support.

THE WORLD FOOD CRISIS

Mr. NELSON. Mr. President, the destruction of the air, water, soil, plants, and animals of our planet home earth is accelerating at such a rapid rate that the continued existence of life is increasingly becoming questionable.

Man's general indifference and disregard for the natural resources in his drive for profit and comfort could someday be the end of him. If man is to save himself and the planet on which he lives, man must learn that he cannot conquer nature. He must learn that he can only live with nature and make certain that he does not continue to violate nature or nature will revolt and leave man without the necessary elements of existence.

Much of the world today faces a serious hunger problem and the arrogant disregard of this problem and the destruction of the natural resources portends the grave possibilities of future famine conditions of monumental consequences.

A valuable discussion of the the world food crisis appeared in a well documented and presented discussion in an edition of the Kaiser Aluminum News. The company publication, unlike the average limited, parochial house organs of industry, devotes the entire issue to the phenomenon of the time. All the articles, researched, written, and edited by the publication editor, Don Fabun, are worthy of reprinting.

I ask unanimous consent that the following articles from one issue of the publication—"The Biological Fire," "The Ecologic Storm," "The Protein Path," and a "Modest Proposal"—be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE BIOLOGIC FIRE—SOIL'S BUT ROCK ON ITS WAY TO THE SEA

Our everyday lives are so filled with miracles that we tend to discount them as commonplace. For one thing, we think of soil as dirt and express our contempt for it in the expression, "dirt cheap." Yet without the thin film of soil that covers all too few areas of the earth, there would be no life on land; no plants, no animals, no humans.

The soil on which earth's civilizations are based today is the end product of literally millions of years of evolution. Out of these millions of years, just like plants and animals, the soil has differentiated into clearly defined species and subspecies, as different, one from one, as the lion from the bear, as the sunflower from the tulip. Like other living things, the soil is born, grows, renews itself, and ultimately dies. Like other living things, it can be hurt, nurtured, killed.

The end result of the greater part of man's activities on earth has been to destroy the soil, just as man exterminated the buffalo and the passenger pigeon, the grasslands of the Great Plains, and the forests that once carpeted Greece and Italy.

For many thousands of years the agricultural practices of clearing and burning, harvesting a crop and then moving on to clear and burn again; of stripping forests down to barrens of stumps and rocks; of allowing vast herds of sheep, goats, and cattle to overgraze the land until the soil is dead—all of these destroyed huge areas where today nothing grows or can be made to grow. These practices have been going on since neolithic times; they still go on.

In more "sophisticated" areas, the killing takes a different form. Under the inroads of the bulldozer, beneath the concrete and asphalt of highways and roads, below the ever spreading urban and suburban buildings, the living soil, cut off from sun, air and water, dies. It is an irony that in many places of the world, the growth of cities destroys the very soil whose productivity created them. And finally, in other areas, intensive overfarming has resulted in ever larger harvests—with an ever falling food content—as witness the steadily declining protein content of wheat in Kansas since World War II, although the harvests themselves are of record size. The soil has not been killed, it has lost a part of its life-giving vitality.

Only in those places (and they are relatively few) where man has learned to treat the soil as a living thing; where he fitted his processes into the life cycle of the soil, replacing, at the end of each growth cycle, the nutrients he has taken out of it, has it been possible to reap harvests rich in food content and abundant in quantity from the same acreage, season after season. Even the most inexpert farmer would not expect to get milk from his cow if he did not feed it; but he often expects the soil to give and give without itself being fed. When urban sewage and garbage are dumped in the river or the sea, or otherwise treated so that they do not return to the soil, the land becomes impoverished. Inorganic fertilizers, where used, help in part to restore what is lost, but not entirely, because the organic nitrogenous compounds are not replaced in this way.

And so we arrive at this point in time

where the amount of new land area that can be put economically under cultivation is less and less and where the real productivity (i.e., the protein content) of the much of the land that already is being cultivated is being steadily reduced. The heart of the food crisis lies not only in the population "exposion" but in the misuse of the planet's soil, both historically and in modern times. The more pressure that is put upon the soil, the more marginal becomes the return for the effort expended. The vicious circle may, indeed, become a spiral to oblivion.

Someone has said, both poetically and scientifically, that "soil is but rock on its way to the sea." And this is as good a description as any. The journey is a long one, often taking millions of years. The staging areas on this long trek are the places where plants grow and where man can farm.

The journey begins with the alternate expansion and contraction of rock through changes in temperature. The cycle of freezing and thawing is repeated endlessly until—just as when we bend a piece of metal back and forth, it finally becomes fatigued and fractures—on the mountain peaks and stony ridges small particles of rock are broken off. Winds scour and sculpture them, rainwater lifts and carries them, gravity pulls them toward the sea. The particles jostle and grind each other, producing even smaller fragments.

Where the slope is gradual, the journey slows, and the rock particles accumulate, perhaps at the rate of an inch each thousand years. Fine dust from volcanoes, ashes from forest fires, microscopic dust carried down by rainfall, settle on the deposit. Because of their different weights and shapes, the particles tend to form well defined colonies, smaller ones sifting into the interstices between larger ones.

Rainwater, sometimes carrying nitrogen oxides formed by lighting discharges, seeps down through the open spaces between the rock particles. Mixing with the salts of the splintered rocks, it forms an electrolytic solution. Here the exposed, electrically charged faces of the rock splinters begin complex electrical interactions, carried as currents in the electrolytic of the salt-laden water. The soil has become, if not alive, something close to it.

Plants send down roots, fingering their way through the interstices between the tiny particles of rock. Down the tubes of the root stalk flows hydrogen and carbon dioxide, manufactured by the plant's leaves from the air above the ground, using the sun's radiation for power. Tiny root hairs spread out from the main root, each hair carrying on its surface a colloidal atmosphere enshrouded by hydrogen carbonate. Within this highly charged atmosphere, hydrogen is exchanged for the ions of nutrients surrounding the soil particles. Gaseous pockets form in the interstices between the tiny particles of rock, oxygen and carbon are present, and thus, the condition for life.

Into this pulsalting community come microscopic forms of life, billions and billions of them to every teaspoonful of rich earth seeking the nutrients freed by the electrolytic reactions in the salt-charged water. Following them come larger beings, feeding on the microorganisms and each other. Like monsters from outer space, earthworms burrow down, carving tunnels for the entry of water and air, leaving behind excretions rich in organic nitrogens. There also are beetles and ants and grubs and mites, their passage opening the pores, providing new tunnels for air and water. These tiny living things act as mobile factories, converting the inorganic nutrients of the soil into organic ones and leaving behind them when they die the legacy of their nitrogen-rich bodies. Leaves and other organic debris sift down, disintegrate, and the particles filter down into the gaseous pockets between soil particles where they are consumed by oxygen, constituting a slow fire—the biologic fire that smolders wherever the soil is living. Out of all this activity, nitrogen and other elements are released in a form that plants can use for the formation of those complex chemical compounds—among them proteins and amino acids—without which animal life could not survive.

This now interlocking system of the organic and inorganic is incredibly rich with life. (One count of the top eighteen inches of forest soil in Illinois indicated a frequency of 65 million insects per acre. Other studies have shown as many as 1,450,000 earthworms per acre in highly fertile soil.)

Immediately above this slowly smoldering biologic fire, drawing nutriment and warmth from it, is a layer of surface and air-borne life; a shimmering haze of insects that are themselves a part of the system. Surveys have shown that hovering above one acre of rich soil in the morning there may be as many as 3,000 insects in flight and in the evening as many as 11,000 or more. Here's where the birds and many small animals, including the reptiles and rodents, take over and forge another link in the precarious food chain that leads up to man.

In time, geologic changes steepen the gradient upon which the soil community has come to rest. Hard rains strip away the topsoil; accelerated by gravity, the tiny particles are carried by rivulets one step further to their ultimate destination, the sea. The layers of newly exposed subsoil rock, hammered by rain, bombarded by sun, alternately expanding and contracting with changes in temperature, receiving the constant sifting down of dust and windborne debris, begin again to build a new generation of soil.

The fractured part of the old community is carried by wind and stream and river finally to some new staging area, and ultimately to the sea, where its rich minerals form the base for the prodigious plant and animal life of the oceans, another source of man's food supply—one rich in proteins.

What we have described here, in often halting, certainly oversimplified terms, is a delicate, highly complex system that requires as much exacting and skillful attention as does any living creature, if it is to thrive and to produce food for man's needs. Agricultural technology, at its best, recognizes the system and fits itself into it: irrigation, tillage, the use of organic and inorganic fertilizers, liming, fallowing—all are means of hastening or preserving the complicated electrochemical transactions of the soil community.

Unfortunately, the scientific understanding of soil chemistry has only been known to us for about a century; it is still unknown to most of the farmers in the world today. Unless this understanding and these techniques can be made known to them, and understood by them, then their struggle to force more and more food out of the soil to feed an ever-expanding population may indeed destroy, perhaps for thousands of years, the very source of food itself.

At the base, then, of the world food crisis, is a problem in communication. It is perhaps of more than passing interest, in a world where more go hungry every day, that we seem to be able to sell soft drinks and petroleum products to even the most isolated village in the most benighted countries, but we are somehow unable to impart even the simplest agricultural techniques that would save their peoples' lives.

THE ECOLOGIC STORM: WHEN LILACS LAST IN THE DOORYARD BLOOMED

Think of the earth as a living thing, swimming through space. The great rock mountains are its ribs, the seas are its blood, the soil is its flesh and plants are its fur. Men and animals crawl upon it like lice.

Of all the earths surface, some seven tenths is covered by water. Of the remaining three-tenths, soil can be found only in a few scattered parts; the rest is mountains, glaciers, arid deserts, volcanoes, barren islands and reefs. Of the whole land area, only seven per cent is currently being farmed.

Soil is, as we have described earlier, a rare and delicate electro-chemical and biochemical community that has taken millions of years to develop. It is the flesh of the earth, and as sensitive as flesh.

What happens when the steel plow slashes like a surgeon's knife through it; when the digging stick pokes it, the harrow rips away the skin, the bulldozer smashes great bruises on it? What happens when the delicate ground cover is eaten to the root tops by herds of grazing animals? What happens when man-made smog obscures the radiant energy that gives it life; when vast fires sweep over its surface? Just the same sort of thing that happens to an animal's skin and flesh when similar attacks occur. It develops scar tissue, changes in character, may even die.

In the wake of wherever man disturbs this age-old community of plants and soil, there is an ecologic storm; the pattern of things changes, new species arise. The heavy tread of the tractor compresses the soil, forces out the air, makes it more dense. The little particles no longer discharge their energies from clusters of ions on their surface, but now, compact, resemble the original rock from which they came; hard, impenetrable to water and root alike. All the little dwellers of the soil, crushed and torn, slowly disintegrate, but their latent fires are no longer kindled by the pockets of oxygen that once filled the interstices between the particles of rock. Water stands upon the impenetrable surface, collects into rivulets, then torrents, and runs seaward, destroying in its path whatever pockets of soil remain. Nearly everyone has seen once verdant farmland, now abandoned to the ravages of erosion.

The harrow and plow rip the surface, letting oxygen in. The biologic fire burns more briskly; the soil quite literally has a fever. Like the last days of one suffering from tuberculosis, here is a final flush, a burst of energy, and then no more; it is the difference between baking a cake, and burning it up in an over-hot oven. The plow increases productivity—for a short span. Unless reinforced by other techniques (like transfusions?) the soil dies in the end.

When a flock of sheep or herd of cattle denudes the land, nibbling the ground cover down to the root tops, the flood of carbon dioxide and hydrogen no longer is pumped down into the soil; the leaves that made them have disappeared. And the leaves no longer soften the rainfall nor filter the harsh radiation. The soil solidifies; scar tissue forms.

In the face of man's onslaughts, the soil community has developed its own defense. Now where the succulent foliage grew, move in the cactus, the thornbush, the thistle, all the spiny, bitter poisonous growth that the grazing animals will not eat. And wherever man walks a constant path, the plants that survive his footsteps will be hardier; more stem than leaf. Ecologists state that they can tell where once man lived by the wild profusion of weeds around the spot, though the remnants of the habitations have long since disappeared.

Similarly, the natural system reacts against the indiscriminate drenching with insecticides and herbicides; new species of resistant plants and insects arise. Meanwhile, the powerful chemicals have been introduced into the food chain—to what final consequence we do not know.

In the long run, man cannot conquer nature; he can only learn to live with it and to integrate his own needs into the system. As we enter an era where we contemplate crash agricultural programs to stave off a threatened famine, it is well to remember that an ecologic storm follows wherever we tamper with nature, and the scar tissue on the earth is the legacy of similarly motivated men in our ancient past.

THE PROTEIN PATH: HUNGER BEGINS WITH A HUNGRY PLANT

"Whatever is necessary," says W. H. Ferry in another context, "is possible." It will be noted that he did not say "probable," only possible. Here we will examine solutions that appear to be possible (because necessary) in the alleviation of the world food crisis. At the present time, their probability seems quite low.

Earlier we presented a list of sub-problems that, added together, constitute the world food crisis. They lead to some seemingly inescapable conclusions. One is that a piecemeal attack, though helpful, is not likely to solve the over-all problem—at least not within the next ten years. The sub-problems are too inter-related, too dependent on multiple and simultaneous solution for that.

Perhaps, then, we should examine other forms of solution that might, just possibly, "buy the time" necessary to find integrated solutions to the sub-problems.

Nearly all of the solutions proposed for the sub-problems are quantitative in nature—their aim is to produce more food for more people in more places. Yet it has been well said, "Hunger begins with a hungry plant." The hungry plant is deficient in proteins for human use. Could we suggest that a qualitative approach might help reduce the magnitude of the quantitative problem, and that perhaps we do not need such vast quantities of new food, so much as to increase the nutritional quality of foods that already exist?

There are a number of currently feasible ways to raise the protein content of already existing foodstuffs, or at least the consumption of them, without planting another acre, without substituting the tractor for the bullock, without changing age-old food habits in any substantial way.

In most of the diet-deficient areas of the world, there are sufficient local sources of protein-rich foods that are not being used because the people who live there do not know about proteins. This is pretty excusable, because many people in the "developed" countries don't know, either. There are examples of how trained nutritionists, moving into back-country villages, have significantly raised the protein intake of local citizens, just by using whatever was growing nearby. But we will start with fish, because of all the world's existing sources of protein, this is, in most areas, one of the most neglected. As Gilbert and Sullivan said (in "Patience") . . . "There's fish in the sea, no doubt of it, as good as ever came out of it."

The plain truth is that out of the 25,000 known species of fish, only a few dozen are used directly or indirectly as food for man. In the protein-deficient countries—Asia, Africa, and Latin America—the consumption of fish products (marine and fresh water) is only about seven pounds per person each year. And yet the fish are there, and it is conservatively estimated that the annual catch of salt-water fish could be raised to far more than the 55 million tons projected as the annual catch in 1969, without the danger of destroying the oceanic food chain.

This would involve a tremendous effort; new ways of raising and harvesting fish instead of hunting them; new types of ships, new port and processing and storage facilities. No such effort is now underway, but this is not to say that it could not be made.

Probably the most efficient use of a greatly increased fish harvest would be in the form of Fish Protein Concentrate, which may be defined as "any inexpensive, stable, wholesome product of high nutritive quality, hygienically produced from fish." The fish, in its entirety, is ground up, reduced to eliminate the water and fish oil, and the resulting product emerges as a powder-like concentrate that is about 80 per cent protein. One hundred metric tons of fish yields 15 metric tons of concentrate, equivalent to 12 tons of 100 per cent protein. The concentrate can be used as a food additive to traditional foods, although some problems of taste and consumer acceptance remain. About 25 grams of Fish Protein Concentrate, used as an additive to already available foods, provides sufficient protein intake per day for an adult.

Costs are high, but not prohibitive. A 90,000-ton capacity plant, capable of producing enough protein for one million people per year, would require a capital investment of about $2.5 million, plus two fishing vessels of 120 feet in length, costing about $3 million, plus dock, handling facilities and distribution. Some $7 million over-all would meet the protein supplement needs of a million persons per year, at a cost of less than two cents per person per day.

Another important source of both whole fish and Fish Protein Concentrate lies in the protein that can be yielded by inland fisheries—the growing of fish in ponds, rice paddies, lakes, reservoirs, rivers, and coastal estuaries. It should be pointed out that some species of fish, as protein producers, are as efficient as chickens, and considerably more so than pigs and other domesticated animals raised for food.

At the present time, inland fishery catches supply about 16 million tons—or 30 percent of the world's total fish yield. Unfertilized ponds yield from 50 to 500 pounds of fish per acre per year; fertilized ponds from 150 to 1,500 pounds; fed and fertilized ponds from 2,000 to 5,000 pounds per acre, when agricultural wastes are used. Where ponds are enriched with grains and seed meals, the yield is from 1,000 to 16,000 pounds per acre. These gains are important; the yield is not only high in protein content, but where ponds are fertilized, one pound of fertilizer yields from five to eight pounds of fish.

The point is, not only are there many already existing bodies of water not being used for fish raising and harvesting, but building new ponds is relatively inexpensive. If the average cost for pond construction is $500 per acre, then the cost of new ponds to meet recommended consumption of inland water fish as a protein supplement for the world's population by 1975 would average only about $80 million annually.

Another possibility is to raise fish along with rice, in those areas where rice is the main source of food. There are approximately 197 million acres planted in rice each year. About 30 per cent of these are covered with water long enough to raise fish along with the rice. In Indonesia alone, there are 150,000 acres of combined rice-fish cultures producing an average of 300 pounds per acre—a total of 45 million pounds of fish annually. In addition, it is estimated that about 150,000 tons of wild fish, not deliberately raised, are produced in rice paddies each year, intensive programs to increase the raising and harvesting of fish in rice cultures, where it is feasible, could do much to supplement protein intake in those large areas of the world where rice is the principle source of food.

To this could be added the deliberate use of salt water estuaries for the production of fish and shell-fish. Where these areas are used—as on the Asia mainland, and in Japan, Formosa and Indonesia—yields are from 400 to 2,000 pounds of fish product per acre each year. In many areas of the world, these rich potential sources of protein are not being exploited at the present time. Unfortunately, it doesn't appear that much is likely to be done about them, either, although the costs are minimal and the results significant.

Already growing, already being harvested each year, is a low-cost source of high quality protein that is equal to all the protein produced by all the livestock in the world. Most of it is fed to animals or used as fertilizer; large amounts are discarded as waste.

This rich, virtually untapped source is the protein that can be extracted from soy beans, cottonseed and peanuts. Had the 1965–66 protein content of these been processed into protein for human use, it would have been the equivalent of 33.3 million tons of protein, compared to a total of 22 million tons produced from meat, milk and eggs. Each additional one percent increase in production of the 1966 soy bean crop would have yielded enough to correct the lysine deficiency in one million metric tons of wheat.

Concentrate from soybeans ranges from 40 to 95 percent protein content, at a cost of from 14 to 40 cents per pound. This material is amazingly versatile; it can be used as an additive to cereal products, in high protein beverages, baked goods, desserts, and processed into a wide range of meat products that, when properly prepared, are virtually indistinguishable from the "real" thing. Moreover, these foods can be produced in factories at costs that range from one-half to one-fifth what it costs to produce similar animal products.

Since soy beans grow best in temperate areas, it would probably be most economical to produce them there and ship the concentrate to the diet-deficient tropical countries. However, in some places it could be produced economically on the spot. According to Agricultural Chemistry (April, 1967), the USDA had developed a simple hand process for making soybean flour in areas where there is neither skilled labor nor electrical power. Five men can produce 300 pounds of soya flour in an eight-hour day, enough to supply the daily protein requirements for 1,600 adults. The flour can be used in beverages, yeast bread, corn bread, noodles, unleavened bread, mush, gruels, soups and desserts.

While not as versatile as soy bean, cottonseed still represents a highly useful, virtually untapped source of protein. It has the great virtue that, unlike soy beans, cottonseed comes from a plant that is indigenous to protein-poor tropical areas of Asia, Africa and Latin America. Upon removal of oil and the seed coat from cottonseed, a concentrate with 50 to 55 percent protein can be obtained. This can be further concentrated—to 70 percent protein—by extracting the carbohydrates. Either concentrate can be used directly for feeding humans, or indirectly as cattle feed.

The great advantage here is that the cotton is already grown and harvested for its fibers and oils so that the cottonseed is a by-product; it can be produced economically by techniques already developed, and in the areas where additional protein is most urgently needed.

Peanuts, which are called groundnuts in most countries, offer a rich and economical source of protein. They grow well in both temperate and tropical areas and are indigenous to the Caribbean Islands, South America, and Africa. Although peanuts can be, and are, eaten directly by man, about 65 percent of the world's production is crushed for oil, which furnishes about 20 percent of the world's trade in edible oils. After the oil is removed, there remains a 50 percent protein concentrate that could be used for human food. Further processing, to remove the carbohydrates, raises the protein content to 70 percent. Although peanut protein is deficient in three amino acids, it can be fortified with synthetic materials.

Again, here is a widely produced crop, already growing, the by-products of which are rich in protein; and the crop grows in areas that are most in need of protein enrichment. Concentration of the protein itself is a relatively simple task, requiring neither high cost equipment nor technical skills. Certainly its use would provide a rich source of badly-needed protein at much less cost than extensive irrigation or new-land farming projects. However, little is currently being done about it.

LEAF PROTEIN

Another virtually unused source of protein is the leaves and grasses which are usually wasted, or at best fed to animals. Nearly all of the essential proteins consumed by man are derived from amino acids originally created in the leaves of green plants, and those that remain in the leafy parts are the same composition as other plant proteins.

Leaf proteins can be introduced into man's diet either by eating them directly (like spinach, turnip greens, lettuce, etc.) or by processing the leaves into high protein concentrates. In the latter, the leaves are pulped and pressed, and the resulting juice, when processed to a dry state, contains about 65 percent protein. The fiber from which the juice was pressed can be used as animal food.

The pressed cake of leaf protein concentrate is green in color and tastes like spinach or tea. Further processing, if desired, can remove most of the color and flavor, as is done in Israel; or in the green state, it can be used as a high-protein filler in native dishes such as ravioli. If a number of kinds of leaves are pressed together, the leaf protein produced appears to be better than cereal proteins and as good as animal proteins other than eggs and milk.

Leaf protein can be produced by hand methods, or with low power input, at low cost, since the raw material is usually considered a waste product anyway. On a village basis, using an input of two tons of feed and an output of 60 kilograms of protein an hour, protein would cost six to seven cents per kilogram (with labor figured at 15 cents an hour—which would be high in many agrarian areas). So far leaf protein has been produced in Jamaica, India, Uganda, New Guinea and Israel, but no large scale research, development or application projects are underway at present, nor, apparently, contemplated.

Whether oilseeds are used, or leaves, or both—there exists at the present time both the raw materials and the techniques for the large-scale production of high quality protein from products largely wasted, using production facilities well within the means of world industry. Precious little is being done about it.

SYNTHETIC AMINO ACIDS

As detailed earlier, the cereal foods that constitute the largest part of the world's diet, particularly in the diet-deficient countries, are deficient in several "essential" amino acids. These nitrogen compounds are "essential" because the body cannot manufacture them itself. Since the grains are already being raised, processed, distributed and consumed, it would appear that one of the most promising approaches to the problem of world malnutrition would be to "fortify" grain cereals with the missing, or deficient, amino acids, produced synthetically.

Fortunately, such a technology already exists. The three essential amino acids that are deficient in most cereal grains are called lysine, threonine and trytophan. Lysine can be produced by mass-production factory methods for as little as $1 per pound. The others presently can be synthesized for $2.50 to $4.50 per pound, but in mass production probably could be produced for prices close to that of lysine. These synthetic materials, different combinations or patterns of nitrogen, hydrogen and carbon, can be produced as colorless, odorless, tasteless crystals.

Their introduction into the already existing food production system would probably be most effective at a central processing point, such as a flour or corn meal mill, where the process would be no different than the current fortification by vitamins and minerals. Thus the people who purchase the flour (or the commercial products made from it) would not in any way have to change their regular food consumption habits. The difference is that they would be eating foods nearly as rich in essential proteins as milk or meat. To extend this system to those areas where the cereals do not pass through central processing, but are prepared on the farm or in the village itself, presents a different sort of problem. However, since what is required is not more difficult than the addition of salt, except that the flavor is not changed, there should be no taste, religious, or cultural obstacles.

Here, in the production, distribution and introduction of synthetic essential amino acids lies an approach that appears to be well within the means of modern industrial process. Projected figures show that such a program would be considerably less expensive than the use of Fish Protein Concentrate (although that approach should also be used in areas where fish products are plentiful). If all the wheat and flour shipped in the 1965 Food for Peace program had been fortified with lysine, the total cost for lysine fortification would have been about $32.5 million for lysine vs. about $84 million for Fish Protein Concentrate.

What is argued here is not that a crash program be directed toward the mass production of synthetic amino acids, but a three-pronged program that involves oil-seed protein, Fish Protein Concentrate and the synthetic aminos. All are technologically possible, all involve mass production and distribution methods well within the state of the art in advanced industrial systems. The combination of these could go a long way toward ameliorating the crucial protein shortage in the diet-deficient areas of the world while longer-term solutions are being worked out. Except for what are virtually pilot-plant sized operations, no large scale programs for the production of synthetic amino acids are currently underway in the technologically advanced nations today.

SINGLE CELL PROTEIN

The idea that crude petroleum and paper can be turned into food for humans is one that most people reject out of hand; not because it isn't true, but because they equate petroleum with fuel for automobiles and newspapers as something to be read and not eaten. Someplace along the line our educational system has failed to make it clear that both petroleum and paper are derived from living products and have in them chemical compounds that can be turned into foodstuffs whose protein composition does not differ materially from milk, beefsteak, or other common foods.

Most of the protein compounds in the world have been produced by the activities of microorganisms. When they are grown on substrates of once-living compounds they produce very nearly the same kinds of protein materials as do plants and animals higher on the evolutionary scale. These microorganisms—principally yeasts and bacteria—can grow on such various substrates as sucrose, molasses, soybean oil, kerosene, petroleum distillate No. 2, waste paper, surplus and spoiled fruits and vegetables, bagasse (wasted agricultural stalks), waste products of the lumber industry, and methane gas. In some cases it is obvious that the use of these materials would not only make important contributions to the production of protein, but would help in solving some of the world's waste product disposal problems.

Other advantages of what is called "single cell protein" production are that the microorganisms grow very rapidly, doubling their weight every five hours or less, which is several thousand times faster than farm animals can synthesize protein. The microorganisms can be grown in tanks requiring no soil or sunlight or rainfall, and they belong to the plant kingdom, so that when harvested and introduced into traditional food systems, they do not run up against religious or traditional obstacles.

The techniques for single cell protein production already are well known. Louis Champagnat, who has developed a sizable pilot scale operation in Lavera, France, has described the basic process (in Scientific American, October, 1965) thus:

"The medium is similar to that for the growing of yeasts on sugar, except that oil is substituted for the sugar. Nitrogen is added to the medium in the form of ammonia salts; phosphorus and potassium are supplied in the form of general fertilizers; trace elements and growth vitamins are added. The product is more than 50 percent protein.

"When the yeasts grown on petroleum have been dried and purified, the concentrate is in the form of a powder or whitish flakes with no pronounced odor or taste . . . Like concentrated protein from meat, fish, yeast or soybeans, the protein from petroleum can be transformed into many different foods."

Dr. Champagnat has calculated that with an outlay of some 40 million tons of petroleum (a small fraction of the total crude oil produced annually in the world), 20 million tons of pure protein could be produced per year. Other advantages are that the organisms feed on the wax in the crude oil, which makes the oil suitable for diesel engines and domestic heating, that petroleum is available in most of the diet-deficient areas, and that the processing equipment can be added relatively easily and economically to the existing 700 refinery complexes throughout the world, thus reducing distribution costs.

The cost of protein thus produced is from 20 cents to 40 cents per pound, still more expensive than oilseed meal containing 40 to 50 percent protein. However, the fact that waste products are used (which are expensive to dispose of, and in any event contribute to the growing air and water pollution program) should be taken into account.

A number of major petroleum firms have undertaken feasibility studies of the single cell protein process, and at least one American firm has been awarded a research project (by the U.S. Public Health Service) to study the production of protein from newspaper and agricultural waste products.

It has been estimated that a research program launched now and costing $10 to $30 million over a period of two to four years might launch a single cell protein industry whose contributions could be significant by the 1975–1980 period. No study of such proportions has so far been undertaken.

GENETIC MANIPULATION

The approaches we have been discussing all involve, at some point, the concentration of proteins in such a way that they can be added to the bulk protein deficient foods that make up most of the diet in the world today. Obviously, if the fortification step could be eliminated, raising the world protein availability could be greatly accelerated, and substantial cost savings might be achieved.

One way of doing this would be to increase the natural protein content of the world's principal cereal crops—wheat, corn, and rice. This can be done through deliberate "genetic manipulation," i.e., choosing and breeding strains of plants that have higher protein content.

This already has been done with corn, for instance, where a superior variety of corn

(opaque-2) has been discovered and developed. It contains about 65 percent more lysine, more trytophan and a better amino acid balance than ordinary hybrid corn. Since corn is an important part of the human diet in much of Latin America, parts of Africa, southern and eastern Europe and parts of Asia, the importance of this discovery is of supreme importance. However, it takes considerable time to develop a sufficient amount of seed corn of a new variety to be able to make it available to farmers on a global basis, and even longer to break down established patterns in order to get it introduced. Thus, while holding enormous promise, the genetic approach involves a period of five or ten years of concentrated effort; an effort not being made at the present time.

Another genetic approach is to create new species of plants that have desirable growing and protein characteristics. In June, 1967, the University of Manitoba announced successful production of the world's first man-made grain, called triticale—a cross between durum wheat and rye. It is a new grain, not a hybrid of an old one. It grows well in very dry country and has a protein quality four percent higher than wheat. Work began on it in 1954—it may be on the market as seed grain by 1970.

The search for improved nutritional characteristics in other cereals has either been initiated or planned, including programs in Mexico for wheat and maize, in the Philippines for rice, and in India for sorghum and millet.

Like everything else mentioned in this section, the technology is there; the will to implement the technology is sadly lacking. We have the way, but not the will. And that is the crux of the world food crisis.

A Modest Proposal

When, in the 18th Century, the plight of the poverty stricken in Ireland became intolerable, Jonathan Swift published "A Modest Proposal," in which he suggested that if the rich would fatten and eat the children of the poor, both food and population problems would be solved. Though eminently logical, for some reason the plan was never carried out.

Something like "A Modest Proposal" appears to be needed now, on the eve of "The Time of Famines." Each sub-problem in the complex that makes up the world food crisis requires enormous commitments of capital for its solution. These commitments are at least equal in magnitude to those made by the U.S. for military purposes—tens of billions of dollars over decades. The commitment would be far larger than the over-all aerospace program and would persist over a longer period of time. Without such a commitment, it does not appear that the world food crisis can be met, short of the kinds of civil and military disruption that would, in the end, cost even more than the commitment.

An approach recently suggested by world business and political leaders would be the formation of a World Resources Corporation, with a divisional World Food Corporation. The general financing and structure of a World Resources Corporation could follow along somewhat the same lines as those established for the Communications Satellite Corporation, which was created under the authority of a law enacted by the U.S. Congress—the Communications Satellite Act of 1962. This formed the legalistic basis for what became an international joint venture—the International Telecommunications Satellite Consortium—in which 61 nations are participating. Shares of the original COMSAT stock were offered to two groups: common carriers in the communications field, who would be expected to use the satellite services, and the general public. The five million public shares were sold out, through underwriters, on the day of the offering.

There are several points to be emphasized here, because they are pertinent to the world food crisis. The first is that the approach was global. The second is that it involved both government authority and private enterprise, particularly that portion of private enterprise with a specific interest in the project. Third, public support and participation were invited. Fourth, there was nothing in the way of collateral except projections of future needs for global communication and a technology that, when further developed, could help meet those needs. No promise was made that the common stock would pay dividends, although it was implicit in the offering that, if the project worked out as expected, it would do so.

There are close similarities here to the world food situation. A World Resources Corporation, enlisting participation from worldwide "agri-business"—the manufacturers of agricultural chemicals, fertilizers, farm equipment, distribution systems, storage facilities, food processing, packaging and marketing—and the general public, on a common stock basis, could generate the magnitude of capital required. The collateral in this case would be the known but not yet exploited resources of the participating countries and the agricultural know-how already generated in the technologically advanced countries. The expectancy of a pay out, for the agri-business firms, would be participation in a rapidly expanding world market as the technology took hold. The expectancy on the part of the public subscribers would be that ultimately the venture would be profitable and would return dividends.

The management of the corporation could be made up of representatives of agri-business concerns and the appropriate heads of participating nations. Implementation could take place through such already established agencies as the Food and Agricultural Organization and the World Health Organization of the United Nations, or similar institutions could be created. The program could draw support from private foundations which already have made important contributions to agriculture in the diet-deficient countries, and from agricultural colleges, universities and research institutions throughout the world.

Vast man-power would be required. It could be drawn in part from organizations such as the International Executive Service Corps, in which retired executives volunteer their expert services in marketing, processing, distribution, etc., and from such rich sources of young and energetic power as the Peace Corps, Vista, or the proposed National Service Foundation. Properly directed, the program could create meaningful jobs for literally tens of thousands of young people whose ethnic and racial backgrounds would make their efforts particularly acceptable in the diet-deficient areas.

The World Resources Corporation's program could begin with something still sadly lacking—a world resources inventory, upon which could be based the selection of feasible targets for development. Since agriculture cannot develop without an industrial counterpart, the Corporation's projects would include mining, manufacturing, transportation, and the development of power sources, in order to create the urban and industrial purchasing power to provide a profitable market for an expanded agriculture. The World Food Corporation Division would concentrate on the agricultural part of the program on at least three levels: basic research to relate temperate zone agricultural technology to other climate and soil areas; development of already existing agricultural systems to a higher level of productivity; and stop-gap projects which can be implemented in a relatively short time—such as protein fortification programs, aimed at alleviating immediate malnutrition problems while the longer range solutions are being explored.

It may be—probably will be—objected that such a system cannot be made to work because of the difficulties of private enterprise and governments working together (although the aerospace program proves it can be done); because of extreme nationalistic policies on the part of participating countries (which hasn't stopped the World Health Organization from functioning) or because there simply isn't enough capital to do it (although it always seems possible to raise this magnitude of capital investment for military purposes, even in peacetime).

It does appear that whenever it has been necessary to overcome these obstacles, they have been overcome. There is no reason to believe this would not also be true in meeting the world food crisis. The alternatives are too awful to think about.

CRIME IN THE DISTRICT OF COLUMBIA

Mr. TYDINGS. Mr. President, the Committee on the District of Columbia has devoted a substantial part of its effort this year to the problem of combating crime in the National Capital area.

We have been working closely with the President and his administration to enact the new legislation necessary to help the law enforcement officers of the District of Columbia to substantially reduce the crime rate.

Our committee was the first to report any part of the President's crime program.

We will complete our action within weeks on all of the bills the President has sent to Congress to combat District of Columbia crime.

Recently, the President held a conference at the White House involving congressional leaders, officials of the Department of Justice, and Chief of Police Jerry Wilson to discuss the crime problem and the congressional action necessary to help meet it. At that time, I reported to the President on the progress we are making, and we had a very useful exchange of views on that subject. The White House has released the transcript of a portion of that meeting which will be of interest to Members of Congress and to the public as well.

I ask unanimous consent that that transcript, plus a summary to date of the activities of the District of Columbia Committee, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CRIME IN THE DISTRICT OF COLUMBIA

(Remarks of the President and other participants at a bipartisan congressional leadership meeting in the Cabinet Room at the White House, Oct. 9, 1969)

The PRESIDENT. Let me open the meeting by saying that in speaking of crime in the District of Columbia, everybody around this table knows that we speak of an issue that is certainly not partisan. What we are talking about here is a problem that is national and it is a problem in which the Congress traditionally has had a function which is very special in relation to the District and also special in relation to what the District can be in its example to the Nation.

I have noted in reading the statements that all of us have made in campaigns, and on the subject generally in nonpolitical speeches about crime in this country, that we have

pointed to the fact that the Nation's Capital, the first city in the world, should really be an example to the Nation and to the world of a safe city, a city in which not only the citizens of this city but the ambassadors and others who visit this city can feel safe, within reason, at least, having in mind the problem that any city, any place, is going to have some crime.

We all know that the situation with regard to crime in the District in the past, going back over several years has not been one that we can be proud of. This is not said in any partisan sense. It has run through all administrations and today it has reached crisis proportions, as the presentation by the Chief (Jerry V. Wilson, Chief of Police of the District of Columbia) will indicate.

Now, what we do about this is something we will discuss after the presentation has been made. But I will simply summarize my opening remarks by saying what is done is certainly related to the actions of three different groups.

First, the Congress has a responsibility. We are, in a sense, the legislative body of the city. It is true that home rule is now being established, but the Congress has the primary responsibility in terms of legislation in this field.

Second, the city government has some responsibility. It can take some action that will be indicated in this briefing.

Third, in the administration of justice, the Department of Justice has some responsibility, and we will have the Department of Justice here to make a presentation with respect to how they are going to meet their responsibilities.

All I am saying here, I emphasize, is simply to present in a preliminary way the situation as I see it. This is not a partisan question, it is a national question. It is a question which I think we want the facts on. We want to know what to do and then it is time to get going and to do it because nobody feels comfortable about sitting on what I think is an explosive, and frankly, when we see these statistics, a disgraceful situation with regard to crime in the District of Columbia.

We cannot point our finger to the other cities or the national crime statistics unless we do something about crime here where we are and were we have the responsibility.

Chief, you tell us the facts.

Chief of Police JERRY V. WILSON. Mr. President, Members of Congress, members of the press:

I have a few statistics here, but this is not a statistical presentation, because I think all of you are generally familiar with the statistics, but it is merely to set a stage for the problems we have.

This is the data of criminal index offenses, January through June of 1969. As you can see, the District of Columbia is second in actual number of offenses and second in offenses per thousand population.

In the more problems areas, for example, robbery, we were first, but there are other cities that are close to us. It is a national problem, as the President said. Baltimore is close and San Francisco is close behind. The San Francisco area has a higher rate than we have in the Washington area, but we do have an extreme problem with robbery in this city at this time, and with crime across the board.

We have also presented data which has been published in the press of comparisons of crime in the District, January through June of 1968 and 1969, showing a 22 percent increase in crime in D.C. and suburbs, compared to a national urban increase of 9 percent, an increase in our own metropolitan area of some 9.6 percent.

I would point particularly to the problem in robbery. We have, again, a real problem area in this city at this time of robberies. In this we have nearly a 50 percent increase in robberies during this period.

To put it in perspective with the past, I have presented data for 1958, 1962, 1966, and 1969. I want to say at the outset that our data for the past years has some question to it. I am not sure how much, precisely. When we say that 1958 was our low year for crime in the city, I am willing to say to you that we were fudging on our statistics some then.

I will give you a 10 or 15 percent edge, and say that our crime may have been 10 or 15 percent more than it is now, but even if you wanted to say that robberies were double in 1958—which was 348, and I don't believe it would double—we have had a tenfold increase in robberies. These are not pickpockets and purse snatching, these are FBI robberies which include force and violence and armed robberies.

We have had an increase in burglary from 1,700 to 10,000 offenses in 11 years, and in auto theft, some 900 offenses to some 4,600 offenses.

This is a projection of trends based on our data for 1966 through 1969, showing a projection indicating that we will rise, unless something is done, from 55,000 annually as of 1969, to some 80,000 offenses annually as of 1972. Note that in our total offenses and in our offenses against persons, we are already going ahead of the trend. That would indicate we have may have even more.

These have been statistics, and again, I am not willing to make a statistical presentation. I want to talk a little bit about what crime is subjectively to people who live and come through the city. I want to talk about Safeway stores, and I don't mean to advertise them, but Safeway stores as a grocery chain, have a large number of intercity chain stores—42—and since July 1 they have had 53 holdups.

They have tried to combat this with armed guards. The consequence has been that they have had one armed guard killed and another shot. They have difficulties now hiring them. These holdups range from one individual who holds up a check-out clerk and the manager doesn't know she is held up until he is gone, to an incident 2 weeks ago in Northeast where five armed men go in and make 100 customers lie on the floor until they rob the store.

This does something to the stores. They can't get competent help to work in the store. It forces the residents of the downtown area to go to the suburbs to shop because they are afraid to go to the neighborhood store.

Safeway will have a quarter of a million dollars in holdups this year.

I will talk about High's stores, 156 holdups since July 1. It is a favorite of the holdup men. In this case, they tend to hire low-paid women who live in the neighborhood. These women often know who held them up, but they are afraid to tell the police because the man is often back on the street. So it is impossible to find out who held them up.

Liquor store holdups are generally down this year. The holdup man has learned that when he goes to the liquor store he is taking that man's money, and that man is going to shoot him. So they go to Safeways, High's, or the deliverymen on the route.

The PRESIDENT. What do you mean they know that the man is going to shoot them? Do you mean they are armed?

Police Chief WILSON. The liquor store people are armed. It is their money. In the High's store it is the clerk who is hired. The store has a good policy, I would suggest, of saying, give them the money, and the cleaning truck driver on the street is going to give it up, but when they go to the liquor store it is that man's money.

Let's talk about the downtown merchants. If you go downtown, you will see that the clerk is going to have a key on a chain around his neck, because the cash register is locked. They have groups of kids—10 or 15. They go into stores and take what they want and go.

Shoplifting is a problem, but it is not the old pilferage shoplifting, it is going in and grabbing and running. It is a real problem. We have worked hard with the downtown stores with this, because the city cannot afford to lose these stores to the suburbs, and this is what happens. The stores give up and move to the suburbs.

Talking about poor people, I had a call yesterday afternoon from a community leader of the Barry Farm Welfare Mothers. The woman was almost crying, saying that the mothers lose their money. The burglars go in and take furniture and appliances. She was telling me about the problem they have in public housing with the children on dope, the 12 and 13 year olds.

This is the problem throughout our city. Two weeks ago a court of general sessions judge called me and said, "My God, I don't know what is going to happen. These holdup men stand in front of me and smirk because they know I have to let them go."

I went to U Street 2 months ago, to one of the real estate offices. He had a sign, "All rent must be paid by check. No cash accepted." The door is locked and the clerk comes to see you before you go in.

I went to a Baptist Church service. They had signs throughout the church, "All officers and employees are prohibited from leaving money on the premises." That is so the burglar will know there are no valuables on the premises.

Even prostitution is rampant in this city, and we arrest prostitutes who tell us they are brought to town with the promise that they are not going to get jail terms on the first or second arrest; they will get fines that they can pay.

Let's talk about the factors that have led to problems of crime. I will not beat the dead horse of the Mallory Rule that happened a long time ago. Our crime has come up. We had a ban on investigative arrests in 1962. We have had some crime increase since then.

There are other factors at work in crime. We have had crime throughout the city where these factors didn't come to work. It is very pointed though, that following enactment of the Bail Reform Act of 1966, crime has shot skyward, beginning in June or July of 1966, and again last fall, as I will discuss later, but largely when the many thousand cases from the April, 1968, riots went to court.

These are the long-term trends. I think there has been in effect just a general tendency to look towards hard law enforcement or firm law enforcement as being a bad policy.

Another factor that has come about has been an explosion of the narcotics problem, and this occurred in 1966. Part of the narcotics problem, of course, is the fact that we have no facilities in this city for treating narcotics. We have no facilities that realistically treat the narcotic addict.

There is a statute on the book which permits the involuntary hospitalization of the addict, but it has never been fully implemented. It was dropped almost entirely in 1966.

Again, I suggest we have poor sentencing policies. We have a policy in this city where all persons get concurrent sentences. The word is, when a man is arrested for a holdup, he knows he is free and he is going to get out on bail reform, and while he is out he might as well live high because he will get concurrent sentences for anything he does after that.

The growth of the juvenile problems has to be mentioned. That amounts to 45 percent of our robberies, 13 percent of the burglaries and 60 percent of the auto theft. All of these problems were accentuated by

the 1968 riots, which clogged the total criminal justice system.

I am one who believes that the total criminal justice system is one that has to be treated. I do not believe that treating the police department is going to solve the problem. But the problem is, we don't have swift justice. Chief Justice Burger said that many people will be deterred from serious crime if they believe the justice is swift and sure. Nobody believes that now, and they are right.

With robbery, we had our long-term trend of crime which literally exploded in our face last fall, especially in armed robberies. In November, December, and January our armed robberies went to unusual highs, from the level of about 300 a month to a level of almost 700 a month.

We had an abrupt drop in February, March, and April. What happened, of course, we think, is that the clogging of the courts from the riot cases probably made the holdup man know he was not going to get to trial.

The other thing was, of course, during Thanksgiving, in response to this, we beefed up police patrols, but in January before the drop came, Judge Hart gave a 15-year to life sentence to an armed holdup man and said he would give it to any armed holdup man who came before him.

At the same time, a general sessions judge, with a petty larceny case, gave the man 2 years.

I think no doubt most important, the court of general sessions in February obviously began disregarding the Bail Reform Act of 1966. This change is clearly reflected by the fact that in April, just before our robberies jumped up again, the Court of Appeals footnoted their letters and opinions by saying they had more repeals under the act than they had during the entire preceding 8 months.

Mayor Washington pointed out in August that something must be done. We need, as the President has said, movement on all fronts; legislative movement, appropriations movement. We need treating of the whole justice system.

I recommend, Mr. President, that the thing that we need most at this time is pretrial detention. I think the conclusion is inescapable that early action has to be taken on change of the Bail Reform Act of 1966. I think this action alone might abate our armed robberies.

We also need court reorganization, but we know that that will take a year or two before it takes effect. We need stronger sentences. We need more than anything else, other than the Bail Reform, to institute the involuntary hospitalization for narcotic users. We need to take them off the street. Our estimates at this time are that as many as 35 to 50 percent of our holdup men are narcotic users. If we can get them off the street, it will be a lot harder for the pusher.

In police manpower, in August the mayor authorized us to spend a quarter of a million dollars in overtime for policemen, but frankly, we have not seen that much effect from it. I don't think this is really an economical way of achieving change. The total justice system has to be treated and I can't emphasize that too much. My greatest fear is that Congress may go home without this being done.

Senator JOSEPH D. TYDINGS. Chief, I wonder if you would give the President an idea of how many—a conservative figure—narcotic addicts are released each month pending trial, without any facility whatever.

Police Chief WILSON. I have no count of the number.

Senator TYDINGS. Would 500 be a conservative figure?

Police Chief WILSON. There are at this point some 1,600 persons out on bail release at this time, and our data, which is not good data, indicates that about 50 percent of these serious offenders are probably narcotic addicts.

The PRESIDENT. Fifty percent?

Police Chief WILSON. Of all serious offenders, probably 50 percent.

Senator TYDINGS. Would it be fair to say that in the last 8 to 12 months that the narcotic addict has moved into the field of armed robbery, away from just burglary?

Police Chief WILSON. Positively, yes, sir. There is no question that the narcotic addict who formerly was involved strictly in crime against property has moved to armed robbery. There is no question.

Senator TYDINGS. As you pointed out, the average robber or holdup man is arrested; he figures he has about 1 year in which to commit as many more robberies as he wishes because of the concurrent sentencing and because he knows he will not be brought to trial for at least a year.

Police Chief WILSON. That is correct.

The PRESIDENT. In concurrent sentencing, as all the lawyers around here understand, the point is that it doesn't make any difference if he is on that kind of a kick, or how many crimes he commits. He is just going to get the same sentence and that is why you get the double impact, as I understand, the moment you let him out. He has no incentive not to commit a crime.

Police Chief WILSON. And no real fear of getting caught, Mr. President. I am satisfied that this is why we have not had more policemen shot apprehending armed robbers, because their best bet is to give themselves up.

Senator TYDINGS. One more question, if you took 200 or 300 of these people out of circulation, what would happen to these statistics?

Police Chief WILSON. If we could get the right 300 people off the street, I think it would probably almost cure the problem. I think that it would do two things: It would get those committing most of the crimes, and the thing that I am afraid has happened is that we have created an atmosphere that not only perpetuates the hard criminal, but also draws into it the youngster who sees it.

The PRESIDENT. Who are the right 300?

Police Chief WILSON. The narcotic addicts.

The PRESIDENT. Not the young ones?

Police Chief WILSON. No.

The PRESIDENT. These are the hard, tough ones who are completely hooked?

Police Chief WILSON. Yes, sir, but we also need to do something about the youngsters on narcotics, Mr. President.

The PRESIDENT. I agree, but you are talking about the hard 200 or 300, and treat the others?

Police Chief WILSON. It is relatively few. There are probably less than 100 professional holdup men who repeatedly get out on bail bond, and we could probably lick the problem.

Senator MIKE MANSFIELD. Chief, to get away from this concurrent sentencing, some of us have introduced legislation which would make the sentencing mandatory if you used a gun in the perpetration of the crime, and it would not run on a concurrent basis with the crime itself, but you would be sentenced separately and positively.

The first offense would be 1 to 10 years, the second would be 25 years. The judge would have no discretion, and in that way the man would be punished, one, for carrying a gun, and secondly, for the crime he committed, but they would not run concurrently, which is the case in so many places today.

Police Chief WILSON. There is legislation now for additional penalties for a crime of violence while armed, and I have never heard of it being enforced, although it is on the books.

The PRESIDENT. We can have more questions later.

At this time Deputy Attorney General Kleindienst and Mr. Santarelli will make the presentation of Justice.

Deputy Attorney General RICHARD G. KLEINDIENST. Mr. President, Members of the Congress, and gentlemen of the press:

I would like to divide this presentation into two parts, a brief thumbnail sketch of what the Justice Department has done, and then have Mr. Santarelli, the Associate Attorney General, who has been intimately involved in the details of the problem for the last several months, go more into depth.

In response to the President's message to the Congress on January 31 with respect to the District of Columbia and crime, the Attorney General brought about his first reorganization of the Justice Department to accommodate and meet this problem. That was done in the Office of Criminal Justice.

In the prior administrations, the Office of Criminal Justice had been a philosophical thing, with two or three people dealing conceptually with the whole problem of criminal justice in the United States.

On February 1, the administration converted this into an action team, addressing itself to the problem of crime in the District of Columbia. Instead of three persons thinking about the problem, we have a permanent staff of five persons, headed by Mr. Santarelli, together with a task force of ten lawyers who have been working continually on the problem, and together with the assistance of other persons and departments of the executive branch.

As a result of their efforts, working some 60 hours a week for some 5 months, within a 5-month period of time, they have put together nearly 500 pages of carefully thought-out legislation in response to the President's message on January 31 dealing in a comprehensive manner with the whole problem of crime in the District.

I would like to outline for you, just by name and description, the present status of this legislation which was presented to Congress on July 11, 1969.

The first bill was the Bail Reform Bill to which the Chief alluded. It is in the Congress as Senate bill 2600 and in the House as House of Representatives bill 18036. So far as we know, no action is planned on it in the Senate. In the House, there is a hearing set on it on October 16.

The second bill is the court reorganization bill and criminal law reform bill.

The PRESIDENT. The hearing is in the District Committee?

Mr. KLEINDIENST. It will be in the Judiciary Committee.

Senator TYDINGS. The Urban Subcommittee on Constitutional Rights.

The PRESIDENT. I would like to have you tell us the committees.

Mr. KLEINDIENST. That is the only bill that is not in the District Committee. It is in the Judiciary Committee. All the other bills I will be referring to are in the District Committee of both Houses.

The next bill is the court reorganization and criminal law reform bill. In the Senate that is divided by the Senate District Committee into two parts, the court reorganization part, which was passed on September 16, 1969, with slight modification, and the criminal law section of it remains in the Senate and is subject to scheduled hearings in the Senate.

Senator TYDINGS. The hearings are complete. It is subject to markup.

Mr. KLEINDIENST. In the House, the bill has remained intact in both of its parts, and is subject to hearings, and so far as we know, there are no immediate prospects or plans for hearings with respect to the entire bill in the House.

The public defender bill is pending in both Houses and Senate and we are pending markup on the public defender bill.

Mr. KLEINDIENST. The fourth is the bail agency bill. The Senate passed a similar version of the administration's bill on July 8. The administration's bill was introduced on July 11, and both bills are scheduled for hearings in the House.

Then on September 26, a juvenile court and law reform bill was submitted to the Congress. The delay in the juvenile court bill was necessitated by virtue of its comprehensive nature, and although significant and important just in terms of priorities for congressional action dealing with the crime problem in the District, it was felt it would take less priority position so far as crime.

I would also like to make a comment with respect to a request by this administration for increased appropriations from the Congress. We have requested on behalf of the Department of Justice a loan of $1½ million additional to permit the Department of Justice to address itself to the specifics of crime in the District of Columbia, and the District government itself has requested an additional $8 million to deal specifically in terms of increases in crime in the District of Columbia. That $8 million would be part of a total package of $20.6 million.

The Department of Justice requests have passed the House and are before the Senate and neither House has passed a request of the District of Columbia with respect to those increased appropriations.

At a later time, we might concern ourselves, Senator Tydings, with these requests for appropriations, particularly looking to the narcotics problem and the treatment of narcotic addicts in the District of Columbia.

That is a thumbnail sketch, Mr. President. I would like to have Mr. Santarelli briefly describe, in depth, the significance of each of these pieces of legislation.

Associate Deputy Attorney General DONALD E. SANTARELLI. Mr. President and gentlemen:

We will start with the Bail Reform proposal. By way of understanding the context of this, I think it is important to recognize that since 1789 we have assured the right of bail in capital cases. Over the years capital cases eroded, and now almost no serious offense is capital except murder.

Now under the reform of the Bail Law, there was enacted a statute which made it mandatory to release persons in noncapital cases, pending trial. The problem with this is that for 176 years, the courts devised a method by which to detain dangerous people. By doing that, the court detained persons prior to trial.

Since 1966 this is no longer possible. Now all persons who are no longer charged with capital offenses are released prior to trial, and since we now have a delay factor of up to 10 months to a year in the District of Columbia for serious felonies, this means that all persons are released.

We have proposed comprehensive legislation to revise the bail law that was passed in 1966. This bill which Mr. Kleindienst mentioned, does a number of things. It specifically allows the court to take into consideration dangerousness to the community by the defendant's release when it sets those conditions of release, or in the alternative, it can detain persons prior to trial in the event that the court finds them to be dangerous.

We have also provided in that bill for extensive due process procedures to assure that no person will be detained improperly. The court has to go through a series of findings before it can order detention, and then only for 60 days, and the trial shall be expedited in those 60 days over and above other less dangerous persons.

We have provided in that bill additional conditions for bail jumping and we have provided that they are consecutive rather than concurrent in their application. That is in the Judiciary.

We have provided a comprehensive proposal for court reform. This applies to the District of Columbia. Presently, it is in the District Committee. The proposal would transfer all of the local, State-like felony crimes and civil jurisdiction from the present United States District Court to a newly created Superior Court of the District of Columbia.

The Superior Court would consist eventually, over a period of 3 years, of 50 judges. That is 23 more judges than presently sit on the court of general sessions.

The Superior Court would incorporate into it the court of general sessions, and we would have a very large court, hopefully able to keep very current with its calendar. We would also expand the present District of Columbia Court of Appeals and create a unified court system, trial court, appeal court, and the appeals going directly to the Supreme Court. We would no longer have a double appeal in the local appeals court and the U.S. Court of Appeals which we presently have.

The jurisdiction would be transferred in stages over a period of 2 to 3 years. In the first stage, 15 or more felony crimes, and finally all civil jurisdiction over the 3-year period.

The new court would have some unique aspects to it. We would give life tenure to the Judges of this Superior Court subject to mandatory retirement at age 70, and subject to good behavior removal. We would create a removal commission which would have the power to suspend, remove or retire for cause, judges who are convicted of crimes, who fail to perform their duty or conduct themselves in a manner prejudicial to the administration of justice and tend to bring disrepute to the office.

This panel would consist of seven members; one judge, three members of the bar and three residents of the District of Columbia, two of which could be members of the bar.

Another aspect that it would have would be a Chief Executive for administration. This Executive would have very broad powers to administer the court in the most technologically advanced and specific manner available.

We wrote into the bill that computers would be used to the greatest extent to calendar cases. We would have a comprehensive Director of Social Services in charge of all the social programs in the court, both probation and in the family court structure. Part of this new court would consist of a family court division, a rather novel situation in which juveniles and their families could be treated together in one comprehensive civil type procedure with a civil remedy of sanction and injunction rather than criminal penalties in a family situation.

A very significant part of the court reform bill is procedural change. We strongly believe that it was not enough to simply add more judges, but we have to have more efficient and fair procedures rather than to rock along with the obstacle-like procedures that we presently have.

We have changed the rules of evidence and changed the rules relating to mental health commitments. We have provided a local wire tap statute, a local conspiracy statute, which we do not have in the District of Columbia.

We have provided for recidivist statutes, including life status for three-time felons. We have rewritten the arrest power and made clear what the power of the police is to deal with crime. We have provided for citizen arrest provisions, a prohibition on resisting arrest, new notions on search and seizure and new powers for the prosecution, including prosecution appeal.

Another aspect of our court reorganization and juvenile bill which was submitted on the 26th of September is a totally new treatment of the juvenile problem. We have made waiver of juvenile persons accused of crime to adult courts a much easier practice. We have lowered the age to 15, so those few hard-core 15-year-olds could be waived to adult prosecution.

We have provided that 16 and 17 year olds charged with violent felony crimes shall be prosecuted as adults, and we have required the practice of requiring jury trials in juvenile cases.

We have elevated the standard of proof requiring new evidence, and we have safeguarded their rights, rights to lawyers, rights to medical examinations and recordkeeping confidentiality.

We have provided a bail agency bill. In this case we are very much concerned that persons who are released prior to trial on pretrial release, with or without a condition, have no effective sanctions against them for their conduct prior to trial. If they do not conform to the condition put on by the court, no one is to know the difference. If they commit crimes, no one is to know the difference.

Therefore, we propose to establish an agency for those people to insure that their conduct conforms to the order of the court.

Senator TYDINGS. That is the bill that passed the Senate in July.

Mr. SANTARELLI. That is correct. We submitted our July letter somewhat different than yours, Senator.

We would also provide for a public defenders office in the District of Columbia, a comprehensive office, capable of representing 60 percent of the indigent persons accused of crime. We have a small agency now which represents 10 percent.

The PRESIDENT. But no public defender. Is there any other city where there is not one?

Senator TYDINGS. Yes, Mr. President, but this is a good bill.

The PRESIDENT. I was thinking of San Francisco and New York, for instance.

Mr. KLEINDIENST. They are not adequate in any city, frankly.

The PRESIDENT. This goes further?

Mr. KLEINDIENST. Yes, sir.

The PRESIDENT. It also goes back to the point we made earlier, and some of these are highly technical matters which lawyers can argue on the committee and on the floor, but what appeals to me about the program that has been presented is that it moves into areas in which you are looking around the country and picking the most advanced kinds of approaches. Things that have been tried before and didn't work, you have thrown out, and things that have been tried and worked, you have incorporated. Also there are some new approaches which brings us to this fundamental point that the District of Columbia could well be a city where we set an example for the rest of the major cities, and particularly because you have here, let's face it, on the Judiciary Committees of the House and Senate, and on the House District Committee, people from all over this country, people who should have the capability and also the responsibility to lead rather than to simply follow.

I think that is really the point. That is the spirit in which I think this has been prepared. I know when we talked about the matter earlier, I urged the Department of Justice in its recommendations to come up with a program not to just patch up some of the old laws we have, so that this city could be an example.

Mr. KLEINDIENST. We think that is what this program is, Mr. President.

The PRESIDENT. Incidentally, I want to say to Senator Tydings, we don't consider it to be the end result. I think your suggestion in terms of the treatment of the juveniles in the narcotics field is an area where we ought to be in the leadership, also. I think that is an area we ought to discuss.

Mr. SANTARELLI. The bail agency bill would provide for new concepts in the representation by the Public Defender's office in all

areas, parole, probation, juvenile representation which is not presently existing in the District of Columbia in all misdemeanors.

Turning to appropriations, I think it is significant in view of the interest expressed here this morning to note that presently pending in the District of Columbia, in the government's request for a narcotics treatment program, is a request for $400,000 in addition for their narcotic treatment programs, and also a request for a reprograming of $200,000 previously requested into a narcotics treatment program.

With respect to correction, which everyone is interested in and does not lend itself to substantive specific legislation, but far more to appropriation legislation, the District government has in its present budget $8 million in additional funds for an improved correctional system for almost 500 additional positions for persons in the system, for new administrative techniques, work release programs and a training academy for correctional officers.

In addition, the police budget for the District of Columbia has a $4 million request for 1,000 new police officers which the President called for back in his message.

The PRESIDENT. I have one fundamental question. In this field of crime, as all of us who are lawyers are quite aware, it is imperative to have a balance between an approach which emphasizes stiff penalties and an approach which gets at what is perhaps the heart of the problem, the repeater.

In other words, it is the treatment of the first-offender and the treatment of those who commit a crime and then go out and commit another one.

Do you consider this program to have that proper balance?

Mr. SANTARELLI. Yes, Mr. President.

Mr. KLEINDIENST. I think we have also addressed ourselves to the essential interest in the care of the innocent at the same time.

The PRESIDENT. Do you have a figure in the District of Columbia with regard to the percentage of crimes that are committed by people who have committed crimes before?

Mr. KLEINDIENST. The recidivism rate in the District is one of the highest in the country.

Senator TYDINGS. I think it is something like 67 per cent within 5 years and maybe a little less within 1 or 2 years.

The PRESIDENT. That gets to the heart of the problem. The Chief mentioned a moment ago that if he could get the 300 most wanted that you could break the back, you think, of this crime wave in the District. I think, also, would you not agree, Chief, that in addition to getting those 300, that if we could have a new approach to the person who commits a crime and then who is going to continue to commit crimes, a new approach to attempt to reduce that tendency that would also be helpful.

Do you agree with a need for that as well? I want this said while the press is here. Chief Wilson has impressed me with his presentation now and also because of his record, and also because he does not approach this simply in the routine way that sometimes very dedicated law enforcement officers do; saying, "more penalties will do it."

He recognizes the penalties and the modifications of the Bail Reform are needed. But you endorse this kind of an approach which gets at this, particularly these young people who commit a crime and then within a year commit another one.

Police Chief WILSON. Mr. President, I think one of the worst parts of our criminal justice system, not only in the District of Columbia, but in the nation as a whole, because the recidivism rate is 73 percent within 5 years, is really that we don't rehabilitate criminals. Criminals really just grow too old to get out and commit crime.

What happens is that they come into the system at 16 or 17 or 18 and go in and out of the institutions until 26 or 27 and perhaps get married and settle down because they are too old to get out on the street at night.

This is what rehabilitates crime in the streets now and it is a sad commentary on our system.

I think at this point in time stricter penalties would help. I don't see that as a long-term solution.

The PRESIDENT. But you need the penalties now?

Police Chief WILSON. Yes, sir.

Senator TYDINGS. Between swifter penalties and stiffer penalties, which, in your opinion, would be the most effective?

Police Chief WILSON. If I could get a man 1 year, 3 weeks after the crime was committed, I would take the 1 year, if I could get it.

Mr. KLEINDIENST. I think the Chief and the Senator have emphasized the due process as a preventive process to the arbitrary bail which is posed by judges on a very arbitrary basis. This gives us precise terms in which you can determine safety in a community with appropriate due process safeguards and I think it would be one of the most significant innovations with regard to this problem.

Police Chief WILSON. The 16-year-old sees the 18-year-old hold up a store and is arrested and he sees him on the street the next day. Two or three years later he has forgotten the fact when the holdup man goes to jail. If you could get them to jail sooner I think it would remove the idea that nobody goes to jail—and they are right.

The PRESIDENT. To what extent has the question been raised about the increase in robberies, due to the fact that narcotics enforcement has become more effective?

Police Chief WILSON. We don't see that a large factor, Mr. President. This doesn't seem to have affected it.

The PRESIDENT. I noted the speculation in the press to that effect. You don't see it?

Police Chief WILSON. Our observation was an immediate rise in narcotics prices which immediately dropped off and it was probably more in the area of profiteering than a real shortage in the market.

We have a feeling that some of the merchants were saying there was a shortage in order to jump the price, but this has dropped off and the price seems to be what it was before.

I think our real problem is almost obviously the problem with the Court of Appeals and the Leathers decision and the subsequent decisions in June.

NOTE.—The President spoke at 8:47 a.m., in the Cabinet Room at the White House. As printed above, this item follows the text of the White House press release.

(Also present for the bipartisan meeting were: Senators Winston L. Prouty and Roman L. Hruska; Representatives Gerald R. Ford, Ancher Nelsen, William M. McCulloch, Glenn R. Davis, and William H. Natcher.)

PARTIAL SUMMARY OF ANTI-CRIME ACTIVITIES OF THE SENATE COMMITTEE ON THE DISTRICT OF COLUMBIA

I. COURT REFORM TO CUT THE BACKLOG OF CRIMINAL CASES

February 18—Senator Bible introduces S. 1067 and S. 1068 on Court Reform.

February 28—Senator Tydings introduces S. 1214 and S. 1215 on Court Reform.

March 25–26—Hearings on court reform cancelled because Administration bill not ready. Committee begins own hearings on narcotics instead.

May 19–22—Hearings scheduled for May 19–22 on Administration bill cancelled. Administration bill still not ready. Hearings held on S. 1067, S. 1068, S. 1214, S. 1215 instead.

June—Court hearings postponed again because Administration not ready.

July 1—Chairman Tydings warns in speech to Board of Trade "I have made every effort possible to wait for the Administration. But I cannot postpone the final court hearings any longer. The Committee will conclude its court hearings the week of July 17 and will proceed in due course to report a bill. I hope the Administration can be ready by mid-July. But we can have no more delays."

July 11—President sends his "D.C. Crime" bill to Congress.

July 15–16–17. Hearings on President's bill (S. 2601).

September 4—Committee orders Court Reform portions (80%) of President's bill reported.

September 16—Report filed in Senate.

September 18—President's Court bill passes Senate.

II. AMENDMENTS OF CRIMINAL LAW AND PROCEDURE

July 11—President's bill received.

September 18, 25 and October 2—Hearings held and concluded. Scheduled to be reported to Senate by November.

III. STRENGTHENLNG THE BAIL AGENCY TO REDUCE PRE-TRIAL CRIME

January 22—Senator Tydings introduces legislation (S. 545).

February 1—Hearings held.

April 22—Department of Justice declines to comment on bill.

July 3—Committee reports S. 545.

July 8—Senate passes S. 545.

July 11—President submits his own bill as part of his "D.C. Crime" bill.

IV. JUVENILE CRIME

June 5—Senator Tydings introduces legislation (S. 2335) for extradition of juvenile delinquents.

August 8—Hearing on S. 2335.

August 11—S. 2335 ordered reported by full Committee.

September 18—Passed Senate.

September 26—President's Juvenile Court bill, promised last spring, is sent to Congress.

October 1—Senator Spong opens hearings on violence in Public Schools.

V. NARCOTICS

February 11—Senator Tydings asks courts and Bail Agency to institute narcotics addiction tests on criminal defendants.

March 2—Senator Tydings asks President to support creation of Metropolitan Washington Regional Narcotics Treatment facility.

March 25–26, April 9–10–11, June 17. Narcotics hearings.

March 26—Senator Tydings calls for Grand Jury to indict major narcotics traffickers.

April 21—Senator Tydings asks Metropolitan Washington Council of Governments to establish task force to coordinate area antinarcotics program.

July 29—Narcotics Crime Conference of Baltimore and Metropolitan Area Law Enforcement Officers, called by Senator Tydings, plans regional narcotics crack-down cooperation.

COMMITTEE ACTION ON OTHER PARTS OF THE PRESIDENT'S DISTRICT OF COLUMBIA PROGRAM

I. MASS TRANSIT DEVELOPMENT

May 16—President's bill introduced by Senator Tydings (S. 2185).

June 10–11—Hearing held.

July 1—S. 2185 ordered reported by Full Committee.

July 8—Passed Senate.

II. HOME RULE

April 25—Committee bills on Home Rule introduced.

April 30—Hearings on Committee Bills.

May 13—President sends his Home Rule bills to Congress.

September 25—President's bills reported to Senate.

October 1—Senate passes President's Home Rule Bills.

III. REVENUE

August 11—D.C. Revenue Bill passed by House (H.R. 12982) (As a tax measure, it had to originate in the House).

August 12–13—Hearings on H.R. 12982.

August 13—H.R. 12982 formally referred to Committee by Senate.

September 24—H.R. 12982 reported to Senate.

October 3—Senate passes H.R. 12982.

THE LEAGUE OF WOMEN VOTERS

Mr. CASE. Mr. President, since its beginning in 1919, the League of Women Voters has shown itself as an effective force for public good. Working on all three levels of Government, the league puts primary emphasis on an informed citizenry, the essential protection for a democratic society. I would like to add my congratulations to the League of Women Voters on its 50th anniversary and my best wishes for the future. I can only hope that the league will be as productive in the next 50 years as it has been over the past 50 years.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of the New York Times editorial entitled "League of Women Voters at 50."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEAGUE OF WOMEN VOTERS AT 50

For fifty years the League of Women Voters has done admirable work across the country in trying to encourage the participation of citizens in their Government. Now, in its semi-centennial year, the League is carrying on an $11-million national drive to enable it to expand its efforts. It deserves support.

As Election Day approaches 150,000 members of the League, located in all of the fifty states and organized into 1,270 local Leagues, are actively engaged in trying to provide accurate, unbiased information about candidates and issues to the voting public. Millions of copies of the League's "Facts for Voters" and "Voters Guides" will be distributed.

The League will arrange countless forums, radio and TV programs at which candidates will have an opportunity to discuss their stands. In this city one of the three confrontations to which the three mayoral candidates have agreed will take place on the League's Direct Line program.

But the League's activities go far beyond its participation in campaigns. Its members study major public problems and seek to develop effective policies for needed changes. In this state, for instance, it has been one of the leaders in the long fight for judicial reform, still not won. Its publications carry highly informative material.

President Nixon, former H.E.W. Secretary John Gardner, and other national leaders have urged support of the League's drive. Contributions may be sent to the League of Women Voters, 105 East 22d Street, New York, N.Y., 10010.

THE TV NETWORKS AND THE NEWS—THE SILENT MAJORITY COMES INTO FOCUS

Mr. DODD. Mr. President, those of us who have complained about biased news coverage by the television networks have until recently taken all kinds of abuse from network sources and from certain elements of the press.

According to some of the statements that were made, a man had to be some kind of right-wing extremist to accuse the television networks of anything less than 100-percent objectivity.

It is welcome news that most of the responsible TV executives today recognize the fact that much of their news coverage in the past has been slanted or biased, that there has been too heavy an emphasis on the negative aspects of our society, and that the networks now are making efforts to rectify the situation.

This change in attitude is the subject of a remarkable article entitled "The Silent Majority Comes Into Focus," published in TV Guide for September 27, 1969.

According to the article there is a general recognition among TV executives now that:

There has been too much one-sided attacking of the United States, its institutions, and its citizens.

ABC's Lester Cooper is quoted as saying:

I want to do a show on what's *right* with America. We've heard so much about what's wrong. I'm not a chauvinist, but I am a patriot. There's a *great* America out there to cover.

Bill Leonard of CBS and Eliot Frankel of NBC both describe new programs designed to show "what is right with America."

In addition to admitting that there has been far too much emphasis on what is wrong with America, the network executives interviewed were very frank in admitting that their coverage of the Chicago riots and of other crisis situations had been seriously biased.

NBC documentary producer Shad Northshield was quoted as saying about the public reaction to the network coverage of the Chicago convention:

I was stunned by the public reaction to Chicago. We all were. I was stunned, astonished, *hurt*. It's the key thing that opened my eyes to the cleavage between newsmen and the majority. We didn't *know* 56 percent would have thought we were unfair. It raises enormous questions about journalism.

Desmond Smith of CBS was even blunter in discussing the question of bias. This is what he said:

There's been a great deal of manipulation from the left. The left and SDS have been getting a great deal of play. Americans are getting to feel they're not getting the whole story.

And Bill Leonard of CBS, while defending their coverage of Chicago, nevertheless gave voice to a bitter attack on bad reporting. Here are his words:

Most reporting is *lousy*. It's lousy because people are lazy, because people don't think ahead, because they approach things in rote ways. We have these kinds of reporters here, unfortunately. The worst problem of all is the reporter who doesn't ask the next question—the *cheap, lousy* reporter who'll quote an attack but doesn't go to the other side, because the answer might kill his story. . . . And these producers who develop and edit a broadcast from the point of view of the way *they* want it to turn out—with their own prejudices showing. That happens quite often. . . . If we could get rid of those people we'd be a lot closer to our goal of objectivity.

Mr. President, I welcome these numerous indications that the networks are rethinking their position and that they are openminded enough to admit their past failings. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE "SILENT MAJORITY" COMES INTO FOCUS

(By Edith Efron)

"The Riots."

"Chicago."

They stick like giant burrs in the newsmen's minds—symbols of the clash between them and the majority of the public.

That clash has not yet been resolved. It still flares up at the slightest provocation and is a chronic issue at the networks, where top executives wait tensely for the day's mail and look back nostalgically at the days when five critical letters were a crisis.

The nature of the public's simmering anger is well-understood. CBS's Bill Leonard says: "The right and the middle complain that we put on irresponsible people from the left." ABC documentary producer Steve Fleischman, too, says: "People feel we've given too much play to the radicals." And NBC News president Reuven Frank says: "The general view of the public is that we have too many radicals in the network news departments."

The newsmen's awareness of the seriousness of this situation was brought to a peak by the "conservative" electoral results—"conservative" being the odd "new politics" label for an amorphous antiradical coalition encompassing the spectrum from "Establishment Democrats" through the Nixon center to the far-right Wallace voters. This active antiradicalism of the majority has reoriented important aspects of the newsmen's professional thinking. As a result, something new is happening in programming. It is a development that will please many Americans and anger others.

What is happening results from a change in newsmen's thinking—so we'll start with that.

The most obvious change is the sudden emergence in strength of an attitude that has been commonplace among viewers for years. Namely, that there has been too much one-sided attacking of the United States, the institutions and its citizens, on the airwaves. This opinion, once viewed as "flag waving" by many newsmen, today is enunciated as follows:

ABC's Lester Cooper: "I want to do a show on what's right with America. We've heard so much about what's wrong. I'm not a chauvinist, but I am a patriot. There's a great America out there to cover."

CBS's Bill Leonard, on an upcoming documentary: "It will capture the spirit of America. We'll be showing strengths as well as weaknesses. It's a wonderful country and it's absurd. You'll be laughing and crying. That's what the U.S. is all about."

NBC's Eliot Frankel: "One of the themes in First Tuesday is to show what's right with America, as well as what's wrong. There's a lot that's right. Decent people, leading decent lives, knocking themselves out for others. . . ."

A good many men are also engaging in intensive soul-searching into the issue of biased reporting. NBC's documentary producer Shad Northshield says: "Bias is on everybody's mind. We've claimed we don't have it. And the viewers say, 'Yes, you do.' I was stunned by the public reaction to Chicago. We all were. I was stunned, astonished, hurt. It's the key thing that opened

my eyes to the cleavage between newsmen and the majority. We didn't know 56 percent would have thought we were unfair. It raises enormous questions about journalism."

One of the issues it raises for Northshield and others is a pronounced bias in favor of minority coverage in past network operations. "In TV news departments," says Northshield, "we appear to know a lot about the black minority. It's the silent majority we must explore. We haven't done it. We didn't know it was there!" CBS's Phil Lewis says: "We're beginning to realize we've ignored the majority. America doesn't end at the Hudson!" CBS News star Joseph Benti says: "We spend so much time on angry blacks, angry youth. But what about the vast forgotten army out there? How many hard-working, law-abiding whites are mad as hell because their story isn't being told?"

Other men have taken their analyses further, in an attempt to get at the causes of this pro-minority emphasis. CBS's Desmond Smith is one of those who suspects that the newsmen have been politically used: "There's been a great deal of manipulation from the left. The left and SDS have been getting a great deal of play. Americans are getting to feel they're not getting the whole story."

Fred Freed of NBC goes further yet. He attributes the situation to the newsmen's own liberal ideology: "This generation of newsmen is a product of the New Deal. These beliefs that were sacred to the New Deal are the beliefs that news has grown on. This is true of the networks, of Newsweek, of The New York Times, of all media. Men of like mind are in the news. It's provincial. The blue- and while-collar people who are in revolt now do have cause for complaint against us. We've ignored their point of view. It's bad to pretend they don't exist. We did this because we tend to be uppermiddle-class liberals. We think the poor are "better" than the middle class. We romanticize them. The best thing that happened to me was a month I spent walking in Detroit slums after the riots. I stopped romanticizing the poor.

"I've come to understand that it's really the same with all classes. You've got to sit down with the cop, with the little storekeeper, and get their views. They're human beings like everyone else. Their attitudes emerge logically from their interests and their values. They should be covered that way."

There are those in top managerial positions who don't pour out such confessions. CBS's Bill Leonard, for example, claims objectivity for CBS News, and declares vehemently: "We have nothing to apologize for, nothing—and I personally include our coverage of Chicago." But, in the course of several hours of conversation, Leonard relaxes and launches into an attack on "bad reporting"—which turns out to be a powerful disquisition on bias: Most reporting is lousy. It's lousy because people are lazy, because people don't think ahead, because they approach things in rote ways. We have these kinds of reporters here, unfortunately. The worst problem of all is the reporter who doesn't ask the next question—the cheap, lousy reporter who'll quote an attack but doesn't go to the other side, because the answer might kill his story. . . . And these producers who develop and edit a broadcast from the point of view of the way they want it to turn out—with their own prejudices showing. That happens quite often. . . . If we could get rid of those people we'd be a lot closer to our goal of objectivity."

And finally . . . there are those who are not theorizing about bias because they're too busy traveling back and forth between New York and Washington, coping with Congressional investigations into their alleged practice of it. CBS News producer Jay McMullen says the following: "We're getting a lot of flak from Congress and the FCC—a lot of harassment. The Congressional focus is on the news area. It has to do with this whole business of our coverage of the riots, of Chicago. Producers are being called down to Washington and asked to explain their news decisions."

With all of this ferment going on behind the scenes, what, precisely is happening to news and public-affairs programming? The trends are exactly what you might guess: there is a shifting of coverage patterns at the polar ends of the usual spectrum covered by the network. The basic coverage, which has a moderate-liberal orientation, will remain the same. But in network news there is a distinct deflation of the coverage of radical left and of radical-left causes, particularly those of a militant type.

Prime-time news, for example, which operates in a restricted time slot, is upping its coverage of the middle and lower-middle classes. CBS has inaugurated a polling service to be used in key controversial stories to check on nation-wide opinion. Regular coverage of suburbia and lower-middle-class areas in the environs of New York City is being stepped up by CBS and NBC New York stations.

These trends are far more visible, however, in the documentary realm, where subjects are few and where the selective process is readily apparent.

Much of the vigorous planned activity for the season's opening lies in the area of "exploring middle- and lower-middle-class Americans." Various broad-gauge sketches of the Nation are ready to go. Some may already have appeared before you read this. At CBS: "A Day in the Life of the United States of America"; "The Making of the President: 1968"; two on "The Generation Gap." At NBC: a two-and-a-half-hour "From Here to the Seventies"; "Election '69: What We Learned," and, on *First Tuesday*, says producer Eliot Frankel, one of the themes will be "the malaise in middle-class life."

As for ABC, there is a veritable outbreak of Americana—with a list of shows up for sale to sponsors with names like: "The American Dream," "Hemingway's Idaho," "Small Town Judge," "A Country Preacher," "American Farmer," "Forest Ranger," "The Marines" and "Sousa Sound"—14 or 15 of such projected shows, as compared to eight last year. According to documentary vice president Tom Wolf, this reflects the thinking of sponsors, who themselves are responding to "the shift of climate in this country, the new attitudes of viewers."

By contrast to this ferment of activity on the majority front, "problem coverage"—the kind that increasingly requires the inclusion of radical opinion white and black—is in decline. The same number of documentary hours is scheduled as last year—a significant proportion of them, however, now packed into two "magazine" formats at CBS and NBC, which, of necessity, have acquired a lighter, "variety" approach to coverage. The number of straight, hour-length documentaries has shrunk and with it has come a diminution of "hard" problem coverage.

Why is this happening? Because of political pressure—defined in its broadest sense, from Congress down to the smallest grass-roots hamlet. The most visible pressure is coming from Congress. Says McMullen: "The tendency, when Congress harasses, is for individual producers to pull in their horns. I think this whole Congressional thing might be affecting the documentary operation." ABC's Steve Fleischman, too, says: "The medium is generally frightened of the documentary realm."

The three network presidents are on record with strong statements that, for the past year or so—ever since some of the public started to blast away at the networks' featuring of radicals and radical issues—Congressional pressures have been threatening the medium's First Amendment rights.

On the national grass-roots level, which underlies Congressional pressure, there is evidence that resistance is building up to coverage of the radicals and radical issues at local broadcasting stations—for whom network news and documentary production is destined. A nation-wide survey conducted by Television Age indicates that programs on these issues are declining. "It may indicate," says Television Age, "that the public has been satiated with studies of . . . urban crises . . . racial tensions . . . dope addiction and poverty."

There are many students of the broadcasting world who believe that the networks, always fear-ridden in the realm of politico-economic coverage, can scarcely afford to become more so. ("We never did have more than four or five tough documentaries a year," concedes CBS's Bill Leonard, "and at that we had more than the other networks put together.") Protests are now surfacing from the left side of the political spectrum—from liberals, radicals and militant blacks who are beginning to charge that the news departments are going "conservative."

One prominent TV journalist describes the trend as "the Nixonization of the airwaves." Variety, the industry's trade paper, accused the networks of cutting back on "hard" issues. And FCC Commissioner Nicholas Johnson charged broadcasters with squeezing out radical thought and of censoring news of capitalist-caused "death, disease, dismemberment and degradation."

Some TV newsmen, too, view the trends in the news departments as "conservative." Says Steve Fleischman, who describes himself as "ABC's kept radical": "Television is reflecting the national trend. There's a conservative, know-nothing stream in this country. And there's a liberal-progressive-radical stream. And there's a great body of people in the middle. The majority of newsmen are in that middle group. Today, that middle group is swinging back to conservatism. It's all part of the white backlash."

Needless to say, many other newsmen actively repudiate the Variety-Johnson-Fleischman criticism.

CBS's Salant has already hurled an answer to Johnson into print (TV Guide, Sept. 20) in which he presents a long list of anti-corporation stories aired by CBS; and, in answer to the charge that there is not enough "death, disease, dismemberment and degradation" on the air, says: "Let [the Commissioner] drop into my office some time and see the viewers' mail that comes across my desk complaining that that is *all* we ever talk about."

And others too grow angry at being described as creatures of a reactionary "establishment."

Snaps Lester Cooper of ABC: "Such criticisms are made by self-conscious, self-righteous, guilt-ridden people who feel the only way they can say something is by attacking." NBC's Shad Northshield raps out: "Doctrinaire, dogmatic opinion!" And NBC's Reuven Frank groans, "Oh, it's so tendentious. Those people want so to be 'in.' The next thing you know, Nick Johnson will be wearing Pucci pants!"

What really seems to be happening is this: "Public-interest" programming—and, most of all, documentary programming—is adjusting itself in a jerky, impulsive yet fear-ridden way to the massive pressure of middle-class opinion, while straining to attain a journalistic perspective. By virtue of this trend, coverage of militant-radical groups will not be eliminated but it is decreasing. As a corollary, the view of America as one vast abscess is now being corrected.

TAX REFORM ACT OF 1969—ACTION OF COMMITTEE ON FINANCE

Mr. LONG of Louisiana. Mr. President, yesterday, October 20, the Committee on Finance met in executive session and concluded its consideration of those portions of the House-passed tax reform bill which concern the use of accelerated depreciation. The committee agreed with most of the objectives of the House provisions, but it did amend the bill to continue the present recapture rules for low and moderate income rental housing.

So that Senators might follow the progress of these executive sessions, I ask unanimous consent that a press release be printed in the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

[A press release from the Committee on Finance, U.S. Senate, Oct. 20, 1969]

TAX REFORM ACT OF 1969—ACCELERATED DEPRECIATION

COMMITTEE DECISIONS

The Honorable Russell B. Long (D., La.), Chairman of the Committee on Finance announced today that the Committee had concluded its executive consideration of the portions of the House-passed tax reform bill dealing with the use of accelerated depreciation. He reported that the Committee was generally in agreement with the objectives of the House provisions and had approved the provisions restricting the use of accelerated depreciation in the case of real property to new residential property. However, in recognition of the goals fixed by the Housing Act of 1968, it had amended the bill to continue the present recapture rules for *low and moderate* income rental housing.

The full details of the Committee's actions are described in the following paragraphs:

Recapture of Excess Depreciation.—The Committee adopted a suggestion by the Treasury Department that in the case of new residential housing the recapture rules of the House bill be relaxed. Under this suggestion gain, up to the entire amount of accelerated depreciation in excess of straight-line depreciation, would be recaptured at ordinary income tax rates if the property should be sold within 10 years. Thereafter, the amount recaptured at ordinary income tax rates would be reduced by one percentage point for each month the property is held beyond ten years. If the property is held for 18 years and 4 months all gain realized on its sale would be taxed as capital gains. (Under the House bill, the recapture rules would apply to the gain reflecting the full amount of the difference between accelerated depreciation and straight-line depreciation.)

Recapture on Sales of Low and Medium Income Housing.—The Committee agreed to another Treasury Department suggestion under which the recapture rules of existing law would be retained without change for certain federally assisted projects such as the so-called FHA 221 (d) (3) and FHA 236 programs and for other publicly assisted housing programs under which the return to the investor is tightly limited. Under present law the gain, up to the full amount of the difference between accelerated depreciation and straight-line depreciation, would be recaptured at ordinary income tax rates if the property is sold within 20 months; thereafter the amount subject to recapture would be reduced by one percentage point for each additional month the property is held beyond 20 months.)

Recapture on Certain Dispositions.—The Committee also agreed to an amendment which would retain the application of the existing recapture rules where the sale of the property was subject to a binding contract in existence prior to October 9, 1969, but where the transfer takes place after this date.

Foreign Real Estate.—The Committee agreed to another amendment also suggested by the Treasury Department (but modified by the Committee), under which accelerated depreciation would be available in the case of construction of residential housing in foreign countries only to the extent that the foreign country allows accelerated depreciation on that housing.

Rehabilitation Expenditures.—The Committee agreed to the provisions in the House bill which allow 5-year amortization of the costs of rehabilitating buildings for low-cost housing. However, it agreed to limit this amortization to expenditures made prior to January 1, 1975. This will provide time for the Congress to evaluate the effectiveness, and the cost, of this new incentive.

Depreciation Allowed Regulated Industries.—The Committee adopted the sections of the House-passed bill which would enact new provisions relating to the use of accelerated depreciation by regulated industries. These provisions generally provide that as to existing property, if straight-line depreciation is presently being taken, then no faster depreciation may be used. However, if the taxpayer is taking accelerated depreciation and is normalizing, then accelerated depreciation can continue to be taken but only if the taxpayer continues to normalize. (The utility retains the current tax reductions resulting from the use of accelerated depreciation and uses this money in lieu of capital that would otherwise have to be obtained from equity investments or borrowing.) No change in the method of depreciation would be required if the taxpayer is now on flow-through. (Where the utility is earning the maximum allowed by law or regulations, the utility "flows through" the tax reduction resulting from the use of accelerated depreciation to the utility's current customers in the form of lower rates.) As to new property, a taxpayer presently on straight-line or presently on accelerated depreciation with normalization will be permitted to take accelerated depreciation on the new property only if the tax benefits are normalized. However, the taxpayer may continue to use flow-through on new property, if the taxpayer is now on flow-through insofar as the same kind of property is involved. The bill does not change the power of a regulatory agency, in the case of normalization, to exclude the normalized tax reduction from the base upon which the agency computes the company's maximum permitted profits.

The Committee made certain changes in the House-passed bill. The more important of these changes follow.

The Committee adopted a provision which will permit regulated taxpayers to elect within 180 days after the date of enactment of the bill to shift from a flow-through to the straight-line method. The regulated taxpayer could also shift to a normalization method if he is so permitted by the appropriate regulatory agency.

The Committee also deleted oil pipelines from the category of companies covered by the bill. Oil pipeline companies compete with non-regulated forms of transportation and are not guaranteed any specific rate of return. However, regulated steam producers were included within the provisions of the bill as well as Comsat.

The Committee also adopted a definition of normalization which provides that a regulated utility must not only normalize on their regulated books of account, but that these books of account must also be used as the basic source of information in setting the current rates to be charged to their consumers. Further, the Committee adopted a provision which provides that a taxpayer would not be treated as normalizing unless the entire deferral of taxes resulting from the difference between the depreciation expenses reflected in the regulated books of account and the accelerated depreciation deducted on their return is normalized.

The Committee also changed the date for determining the status of a company under the bill from July 22, 1969, to August 1, 1969 (the date the bill was introduced in the House and its specific provisions were made public). Further, the Committee adopted a provision which provides that the status of a company will be determined in the first instance by what was done on its income tax return for its most recent taxable year. In addition, regulated companies which have accelerated depreciation (with flow-through) in computing their tax expenses on their regulated books of account for the latest monthly period ending on or before August 1, 1969, would be permitted to elect accelerated depreciation (with flow-through) for future acquisitions. Also, a utility which had filed a request before August 1, 1969, with the Internal Revenue Service, or with the appropriate utility commission, for permission to change from straight-line to accelerated depreciation would be permitted to make that change for such property and future acquisitions.

Earnings and Profits.—The Committee adopted the provision of the House-passed tax bill which provides that for purposes of computing its earnings and profits, a corporation must deduct depreciation on the straight-line method, or on a similar method which provides for a ratable deduction of depreciation over the useful life of an asset. The provision would not affect the amount of depreciation that could be deducted in determining the corporation's income tax. However, the Committee dopted a change which would make it clear that this new rule would not affect foreign tax credits. The amount of the foreign tax credit which would be allowed a company would be computed as under existing law and would not be affected by this provision of the House-passed tax bill.

POLLUTION REVOLT

Mr. NELSON. Mr. President, before the next 10 years have passed, the Nation will be facing a grave water crisis. Many sections of the country are already having serious water problems, and the accelerating rate of business, industry, municipality, and farm pollution of the Nation's water supply portends disaster for the future.

An editorial published in the Stevens Point, Wis., Daily Journal recognizes the leadership of the Wisconsin Seventh District Representative, DAVID OBEY, and his leadership in working for the appropriation. Mr. OBEY is a young Congressman who has shown his concern for the environment and is pledged to work for clean air and water. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLLUTION REVOLT

A revolt of major proportions is building in the House of Representatives against the administration's attempts to keep the lid on new spending for water pollution control.

A bipartisan group of congressmen—208 so far—have attached their signatures to a pledge to vote for a $1 billion appropriation for water pollution control early this month. The 7th District congressman, David Obey, D-Wausau, is in the forefront of the group.

At issue is the promise explicit in the 1966 Clean Waters Restoration Act of federal matching funds to the states for construction of waste disposal plants. But for budgetary reasons appropriations have lagged far behind authorizations.

During fiscal 1968, only $203 million of $450 million authorized was appropriated. For fiscal 1969, a total of $214 million was appropriated of an authorization of $700 million. The administration would like to hold fiscal 1970 spending to $214 million, out of $1 billion authorized.

This is what the revolt is all about. The protesting lawmakers doubtless sense political gain in the process, but that is not the only motivation for the rebellious insistence that the full billion dollars be appropriated this year.

Obey related last week how the administration's failure to come up with money promised has affected projects in the 7th District. He outlined a program of 87 water treatment projects being developed throughout the region he represents, to cost an estimated $12,809,533. Of this total, $4,688,543 would be in federal aid.

These projects have been developed to a large extent in response to orders from state authorities to clean up pollution. The state issued the orders in the belief that the federal government would keep its pledge to help municipalities comply with such orders.

But only a fourth of the money promised has been provided. The result of failure to receive federal matching funds is that the project comes to a grinding halt, for municipalities have no resources of their own salted away for such contingencies. Thus, without the $4.6 million promised from Washington, nearly $13 million in sewage treatment improvement will not get done in the 7th District.

Only 10 more signatures are needed on the pledge to assure passage.

CONTROL OF DRUG ABUSE

Mr. TYDINGS. Mr. President, on September 17, Dr. Stanley Yolles, the director of the National Institute of Mental Health, presented extremely interesting testimony on drug abuse before the Senate Subcommittee To Investigate Juvenile Delinquency.

Dr. Yolles is director of the Government agency responsible for research on narcotic drugs.

With the current controversy raging about the relative danger of the various illegal drugs, I believe Dr. Yolles' comments are well worth our consideration.

I ask unanimous consent that Dr. Yolles' remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

CONTROL OF DRUG ABUSE

(Statement by Stanley F. Yolles, M.D., Director, National Institute of Mental Health, Associate Administrator for Mental Health, Health Services and Mental Health Administration, U.S. Department of Health, Education, and Welfare, September 17, 1969)

Mr. Chairman, Members of the Committee, I appreciate this opportunity to appear before you today as a professional involved and interested in the phenomenon of drug abuse in the United States. I would like to make clear that I am not representing the Department of Health, Education, and Welfare. The Department has not filed a report on the bills pending before you and therefore I cannot comment officially about them.

As a physician, my opinions, convictions and conclusions are based on almost twenty years of professional involvement in the development of research, treatment and rehabilitation as they relate to users of narcotics and other dangerous drugs. My professional experience at the Public Health Service Hospital in Lexington, Kentucky and through the succeeding years at the National Institute of Mental Health, has included consideration of all facets of the drug problem—from prevention to penalties. So I have some strong convictions on the subject, based on professional and scientific experience.

With your approval, Mr. Chairman, I would first like to summarize the drug situation and then talk about hard narcotics and marihuana as separate and distinct parts of the total problem.

Dr. Sidney Cohen, Director of the NIMH Division of Narcotic Addiction and Drug Abuse will speak to the hallucinogens, the amphetamines and the barbiturates.

THE DRUG PHENOMENON

The widespread social problem of drug abuse in the United States is no longer restricted to any one part of our population.

It is found at all social and economic levels: in the core city and in the suburbs. It is no longer restricted only to the young. It involves the junior executive and the housewife, the professional individual as well as the ne'er-do-well.

In this situation, there are things that need to be said on the basis of available fact and of professional and scientific experience.

There are unfortunately no totally reliable data on the prevalence of drug abuse, but it is a problem that is growing at an alarming rate.

In the case of narcotic drugs, statistics supplied by the Bureau of Narcotics and Dangerous Drugs for 1968 indicate that there are approximately 65 thousand active *hard narcotic* addicts in the United States. This is undoubtedly a minimal estimate, since it is solely based on reporting from law enforcement agencies.

A more plausible estimate is in the range of 100 thousand to 125 thousand active narcotic abusers in the United States.

The number of non-narcotic drug abusers, including those addicted or habituated to agents such as sedatives, stimulants, related drugs, and certain tranquilizers, can only be grossly estimated.

The range of persons directly affected by abuse of these drugs, based on available data on production and illicit distribution, lies somewhere between a quarter and a half million people.

The use of LSD has apparently declined during the past two years, but there is still evidence of active experimentation with LSD by some teen-agers. It remains a drug of abuse essentially for young middle-income persons.

Marihuana use has been rapidly increasing in the past five years.

A recent survey of certain high schools suggests that as many as 50 percent of students in selected urban and suburban areas surveyed have had some experience with marihuana.

A conservative estimate of persons in the United States, both juvenile and adult, who have used marihuana at least once is about 8 million and may be as high as 12 million people.

On a worldwide basis, marihuana is an intoxicant second only to alcohol in popularity and is used by some 200 to 250 million people.

These are facts to be reckoned with in a reasoned discussion of the problem and its possible control. But because drug use and abuse touches our deepest values, our hopes, our aspirations as well as our fears, it is an emotionally-charged area.

For every false prophet advocating drug use there is a viewer-with-alarm prone to sensationalism and the advocacy of simplistic solutions. As our sensitivity to the drug problem has increased over the years, our sense of proportion seems to have diminished.

However, in recent months, there have been significant indications that we, as a population, are ready to stop defending the mistakes of the past in our efforts to control the abuse of dangerous drugs and, rather, to explore new pathways through which our society can make its decisions.

Both President Nixon and President Johnson have strongly stated this need for a new approach toward understanding the problem.

President Johnson, recognizing that a recodification and unification of the laws on narcotics and dangerous drugs was long overdue, established the National Commission on Reform of Federal Criminal Laws. The report of this Commission has not as yet been published, but its findings will include recommendations on drug legislation.

President Nixon, in his message to Congress on combating drug abuse, stated that "it has been a common oversimplification to consider narcotics addiction or drug abuse to be a law enforcement problem alone."

Pointing out that effective control of illicit drugs requires the cooperation of many agencies of the Federal, State and local governments, the President said, "At the Federal level, the burden of the Federal effort must be carried by the Departments of Justice; Health, Education, and Welfare; and the Treasury."

As a health professional, I am strongly in favor of this kind of joint approach to the problem of control. I recognize and support the need for reasonable enforcement measures to control the problem. However, means to control drug abuse must include recommendations from the medical community, as well as from law enforcement officers. Too often, in the past, the medical point of view has been neglected.

Drug abuse is not a simple, unitary phenomenon. Drug use and abuse are health, legal, social, economic and moral problems.

It is necessary, in dealing with such complex phenomena, for the medical community at this time to accelerate the kind of research which will yield the basic knowledge for a more rational approach to the problem.

President Nixon has also emphasized that the solution to the problem has been hampered by lack of information.

"Proper evaluation and solution of the drug problem in this country," the President stated, "has been severely handicapped by a dearth of scientific information on the subject—and the prevalence of ignorance and misinformation."

It will take some exceedingly hard work to dispel the doubts and mistrust surrounding information on drugs, because from the beginnings of efforts to control drug use in this country there has been a long parade of what might best be called "error" and what has ranged from ignorance to misrepresentation.

Dr. Thomas Parran, while serving as Surgeon General, had this to say in 1938, during the dedication ceremonies of the PHS Hospital at Fort Worth, Texas:

"Errors were at first made in the treatment meted out to addicts. From doing nothing about the narcotic problem, we started in a sudden burst of enthusiasm to clean up the situation without proper regard for human values and without considering the suffering and distress entailed in a rigid enforcement of the law as it then stood.

"The law, in effect, made criminals out of persons who were guilty only of suffering from the effects of a weakness they could not control. . . .

"It soon became evident that we were in danger of losing by too harsh application of repressive measures what we were gaining by more intelligent attention to some phases of the addiction problem. We often completed the ruin of individuals whom it was our duty to save."

What we must realize in 1969 is that—although the drug abuse problem of today is acute—it has been with us for a long time and we have accomplished little in developing techniques that might have helped us in our current dilemma.

This situation is especially regrettable, because there is a large body of information available upon which improved methods of combatting the drug abuse problem can be based.

There are few fields in which there have been so many competent and thorough investigations by committees and commissions over the years as there have been in the area of narcotics and other dangerous drugs.

They include the 1938 Mayor's Committee of New York; the 1951 American Bar Association's Commission on Organized Crime; the 1963 President's Advisory Commission on Narcotic and Drug Abuse (the Prettyman Commission); the 1967 Commission on Law Enforcement and the Administration of Justice; as well as the Wootton Committee of Great Britain.

These professional groups have reported with a unanimity not often evident in such a controversial subject area and I will refer to some of their specific recommendations later on. At the moment, I merely want to point out that the Nation has not accepted or implemented their recommendations. But the findings are available for the using, so that I see no need to establish another committee or commission to study marihuana.

Instead of favoring another commission, I find myself asking, "How long, Oh, Lord, how long are we going to suggest new committees, new commissions and new task forces in lieu of doing something?"

Certainly, studies of drugs and drug users must and are continuing, many of them supported by the NIMH. I submit that these studies serve to develop new information more expeditiously than any additional review-by-commission—at least until we have made use of the opinions and recommendations already available.

In contrast to establishment of another commission, I would favor provisions to direct the NIMH to conduct research and make a basic determination on marihuana. Some relevant studies are already under way.

Such proposals call for an end to the approach that passes restrictive laws first and than gets scientific evidence afterward.

We must put a very strong spotlight on this issue, Mr. Chairman. It is basic to any improvement in the control of drug abuse.

We cannot continue to restrict use, and legislate against the use of dangerous substances without scientific basis for control.

Senator Hughes, speaking in August at hearings of the Subcommittee on Alcoholism and Narcotics, in pleading for "open-mindedness and a willingness to make a fresh start", said:

"We are working from a prosecution, rather than a public health approach.

"The onus of the criminal association with drugs is a severe obstacle to therapy in drug addiction; and we can't even communicate with our kids about smoking pot because, under our laws, smoking marihuana and shooting heroin are in the same league, and neither we nor our kids can forget it."

This Committee is primarily concerned today with proposed Federal legislation, but the current framework of State law also illustrates the need for a more sound basis for public policies concerning drug abuse.

In the last year, State legislatures within this country have passed diverse and sometimes contradictory laws in their efforts to control drug abuse. At least 20 States have this year either passed new laws or amended existing statutes; and another 20 are debating proposed changes.

It would be tragic if these changes continue to be based on old confusions and controversies. The disparities among laws in the States need to be lessened rather than increased and this can occur only after agreement about the degree of risk associated with the use of each drug and an appropriate proscription of use based on that risk, and the Federal Government should point the way.

One of the major difficutlies in efforts to arrive at effective control of drug abuse has come from the practice of grouping dangerous drugs arbitrarily, with little regard for their differing characteristics and their specific and distinct effects.

I hope that Dr. Cohen and I can clarify these differences, to help define the degree of danger in the abuse of each of the dangerous drugs.

NARCOTICS

There can be no doubt that control of narcotics is necessary, both to protect the user and to protect society. The major dangers of abuse of drugs such as heroin are known and have been repeatedly demonstrated.

The direct result of overuse may be death. Indirect results are often ill health, or death from hepatitis, pneumonia, malnutrition, or infection and disease induced by the use of dirty hypodermic syringes. And as a way of life for the individual, there is gross deterioration in a "junkie" culture.

Stronger and more effective controls on smuggling, sale and distribution of narcotics by the underworld are needed.

However, realizing that laws seeking to control personal consumption by individuals are notoriously hard to enforce, I would urge the further expansion of high quality treatment and rehabilitation programs.

The principle that treatment and rehabilitation of the addict is to be preferred over punishment has only recently become a Federal policy, with the passage of the Narcotic Addict Rehabilitation Act of 1966.

As I have mentioned, Dr. Parran's concern over the punitive bases of treatment was expressed in 1938. Other professionals had also spoken out for reforms. But civil commitment for narcotic addicts received its greatest impetus in 1962 when the Supreme Court, in the Robinson case, declared that statutes making addiction to narcotics a criminal offense were in violation of the Eighth Amendment.

The court maintained that drug addiction is an illness "comparable to leprosy, insanity, and the common cold" and that criminal punishment could not be inflicted for it.

Ironically, although the decision was a milestone for the principle of treatment and rehabilitation, it came too late to help the addict Robinson. Free while his appeal was pending, Robinson had already died in a Los Angeles alley before the Supreme Court made its ruling. According to police reports, the cause of death was an overdose of narcotics.

The passage of the Narcotic Addict Rehabilitation Act of 1966 opened a pathway to treatment of the sick addict.

The statute in no way limited enforcement of laws designed to control drug traffic, or to prosecute organized criminals. What the law recognized is the fact that the individual *addict* is sick and needs help.

The NARA legislation was adopted so that a community-based treatment and rehabilitation program could be developed in the United States. Research advances made it worthwhile to try some new approaches in solving the stubborn narcotics problem.

The NIMH is carrying out a comprehensive program in an attempt to develop the necessary understanding, manpower and improved techniques for dealing with the narcotic problem.

Through its administration of the NARA Act and the Narcotic Addict Rehabilitation Amendments to the Community Mental Health Centers Act, the NIMH is actively carrying out the Congressional mandate to treat and rehabilitate, rather than punish the addict.

The program has been in operation for a year-and-a-half. Six community treatment programs for narcotic addiction were funded in FY 1968 and are in operation. Ten more were funded in FY 1969.

I am in general agreement with legislative provisions to expand eligibility for treatment under NARA, to include those addicts charged with burglary, those who have failed after three or more civil commitments and those who have had two or more felony commitments.

However, I must point out that these patients would require more intensive individual treatment than it is now possible to provide, given the current rate of funding and the personnel ceilings imposed on the program.

Even for patients now eligible for treatment, the present capability of the two Federal Clinical Research Centers at Lexington and Fort Worth is overtaxed.

Since the inception of the NARA program, Fort Worth and Lexington have examined 2,236 patients civilly committed for treatment under Titles I and III of the Act.

Of that number, only 52 percent (1,071) were in treatment by June 30, 1969. The 48 percent (1,059) had not been accepted after the thirty-day examination and evaluation period.

The patients who were not accepted for treatment, Mr. Chairman, were patients with very difficult problems. If we were to try to treat them, it would require about twice as many staff members at Fort Worth and Lexington as we now have.

As a matter of actual fact—and one which is ignored every time we talk about the treatment program for narcotic addicts—given the funds and personnel currently available, any increase in the number of patients will result in a reduction of the ratio of treatment staff available to patients. The result will be less individual treatment and poorer care.

Almost since their establishment, Lexington and Fort Worth facilities have been financially undernourished and understaffed.

If there is to be proper treatment, the facilities must have trained people to provide it.

Our hope in the long run is that the States and communities will take a more active role in developing narcotics treatment programs—aided by Federal support for construction and staffing under the Community Mental Health Centers Act.

As of June 30, 1969, the six community treatment programs funded under the provisions of NARA had a total of 1,948 addicts in treatment. By next year, the ten community programs funded in FY 1969 expect to be treating an additional 5,400 addicts.

However, far too few of these centers have been funded so far, and until more of them can be organized, the States are unable to take on much of the task.

States and communities are having difficulty in financing operations of community mental health centers as Federal support of initial staffing costs decreases and

terminates. The Act should be broadened to include support of the total cost of operation of these centers, as originally authorized, rather than only the cost of initial staffing.

Assistant Secretary Creed Black, of the Department of Health, Education, and Welfare, presented the Administration's recommendations in this regard in July, before the Subcommittee on Health of the Senate Committee on Labor and Public Welfare.

"Few communities," Mr. Black pointed out, "are able or willing initially to devote limited resources in these two problem areas. Americans have very ambivalent feelings about alcoholics and narcotic addicts. The patients are very difficult to treat. Professional interest needs to be stimulated.

"We believe, therefore, that preferential matching and a longer period of Federal support than 51 months will be necessary. The necessary matching ratio is yet to be determined; but it is clear that such preferential matching is essential."

It takes *people* to provide aftercare for addicts when they are trying to rehabilitate themselves once they have broken the habit. It takes *people* to manage these programs.

In most statements on this subject, Mr. Chairman, a need for more *enforcement* personnel is recognized but *nowhere* is there mention of the need for treatment personnel, or personnel to conduct research and training programs.

If we are to make any significant headway at all in control of drug abuse, then we must place far greater emphasis on the treatment and rehabilitation of narcotic addicts. The need for medical personnel for treatment must be recognized as of equal or greater importance than the need for people to enforce the law. I am pleased that legislative proposals include provisions to improve the narcotic rehabilitation program, because there has been significant progress in treatment programs for addicts, and these efforts should be expanded.

The development of experimental methadone maintenance programs and the use of narcotic antagonists, such as Cyclazocine and Naloxone, have been both exciting and controversial.

Since methadone maintenance involves the continued use of a narcotic substitute on a long-term basis, it has been the object of some criticism. Methadone does not appear to be a "universal treatment" for all addicts, nor does it result in an abstinence from drugs.

The goal of methadone maintenance is to achieve socially acceptable behavior on the part of the addict, rather than to require abstinence, per se. This treatment approach operates under the principle that if, in fact, *any* medication permits a narcotic user to become a law-abiding and productive member of society, it should be acceptable medication.

To understand all the implications of this treatment, we are supporting a wide variety of studies in this regard. And studies are also being supported to develop new and long-acting narcotic antagonists such as a depot (long acting) cyclazocine, to block the action of narcotics.

Given the proposed methods to strengthen support for community narcotic addiction treatment and rehabilitation programs, and with a wider implementation of NARA, we have *on paper* the capacity in this country to effect a significant reduction in the abuse of narcotics and begin effective education to prevent hard drug use.

How we transform the words of the statutes into practical results depends on men and money. Without these, present enforcement techniques in the narcotic field will only continue to spin the addict around in the revolving door from jail to inadequate treatment and back again.

MARIHUANA

Mr. Chairman: I would now like to spend the remainder of my time here in talking about marihuana.

Because of the increase in the use of marihuana and because of the confusion and controversy resulting from that use, it is of the greatest importance to present factual information about the drug itself, the effects of its use and the history of efforts to control its use.

For, unless we separate fact from fable in the public uproar over the use of this drug our efforts to achieve effective and acceptable controls over marihuana use will indeed be just "more of the same."

The marihuana story for 1969 in the United States goes back to the 1930's.

The "great experiment" was over. The prohibition of the use of alcoholic beverages, under the Eighteenth Amendment, had ended.

For better or worse, American voters had made it clear that they considered alcohol a social beverage, and chose to limit prohibition of its use through State laws which vary to this day, in terms of "wet" and "dry" jurisdictions and the age at which individuals can legally drink beer, wine and spirits.

The experiment, which we voted to terminate, had produced at least two major results: the social usage of alcohol by adult men and women had increased and the contempt for an unpopular law had spread, bringing other legal restrictions on manners and morals into question.

At approximately the same time, however, enough hue and cry over the *reported* evils of another intoxicant—marihuana—resulted in the adoption of the Marihuana Tax Act of 1937.

We know that marihuana is not, scientifically, a narcotic drug like heroin or morphine, but is a mild hallucinogen. It should not be associated with narcotics—either medically or legally.

However, "guilty by association" with narcotics occurred for marihuana for the first time in Federal law in 1929, with the passage of P.L. 672—70th Congress—authorizing the establishment of the Lexington and Fort Worth Hospitals.

In the statute, the term "habit-forming narcotic drug" or "narcotic" was specifically defined—drug by drug—and on the list was "Indian hemp (marihuana) and its various derivatives, compounds and preparations."

Nowhere in the Committee Hearings or in the Congressional Record was there any discussion of the rationale for this drug classification.

As States adopted the Uniform Narcotic Drug Act which included marihuana, it was more widely classified as a narcotic.

And so the stepping-stone concept got its start. Once labelled as a statutory narcotic, marihuana continued to be so labelled in succeeding years.

By 1937, the use of marihuana was reported to present so severe a health danger that Federal controls were represented as necessary. And so the Marihuana Tax Act of 1937 was enacted, even though many of the statements in testimony before Congress were substantially untrue.

The Report to the Senate on the Bill quotes the following testimony:

"Under the influence of this drug (marihuana) the will is destroyed and all power of directing and controlling thought is lost. Inhibitions are released. As a result of these effects, many violent crimes have been and are being committed by persons under the influence of this drug. Not only is marihuana used by hardened criminals to steel them to commit violent crimes, but it is also being placed in the hands of high-school children in the form of marihuana cigarettes by unscrupulous peddlers. Its continued use results many times in impotency and insanity."

Elsewhere in the testimony, a witness stated, "I believe in some cases that one marihuana cigarette may develop a homicidal maniac probably to kill his brother." (sic)

At the time of the hearings on this proposal, one of the witnesses was Dr. William C. Woodward, appearing for the American Medical Association.

In speaking about newspaper accounts of abuse of marihuana, Dr. Woodward said:

"It has surprised me that the facts on which these (newspaper) statements have been made have not been brought before this Committee by competent primary evidence. We are referred to newspaper publications concerning the prevalence of marihuana addiction. We are told that the use of marihuana causes crime.

"But as yet no one has been produced from the Bureau of Prisons to show the number of prisoners who have been found addicted to the marihuana habit. An informal inquiry shows that the Bureau of Prisons has no evidence on that point. Dr. Woodward pointed to a series of agencies including the PHS who had not been consulted.

"You have been told that school children are great users of marihuana cigarettes. No one has been summoned from the Children's Bureau to show the nature and extent of the habit, among children.

"Inquiry of the Children's Bureau shows that they have had no occasion to investigate it and know nothing particularly of it.

"Inquiry of the Office of Education—and they certainly should know something of the prevalence of the habit among the school children of the country, if there is a prevalent habit—indicates that they have had no occasion to investigate and know nothing of it.

"Moreover, there is in the Treasury Department itself, the Public Health Service, with its Division of Mental Hygiene. The Division of Mental Hygiene was, in the first place, the Division of Narcotics. It was converted into the Division of Mental Hygiene, I think, about 1930. That particular Bureau has control at the present time of the narcotics farms that were created about 1929 or 1930 and came into operation a few years later. No one has been summoned from that Bureau to give evidence on that point.

"Informal inquiry by me indicates that they have had no record of any marihuana or Cannabis addicts who have ever been committed to those farms.

"The Bureau of the Public Health Service has also a division of pharmacology. If you desire evidence as to the pharmacology of Cannabis, that obviously is the place where you can get direct and primary evidence, rather than the indirect hearsay evidence."

The indictment by Dr. Woodward, who qualified both as a physician and an attorney, of the acceptance of "indirect hearsay evidence" by the Committee brought forth neither questions nor comment at that time.

The legal history of marihuana control measures is a matter of record and I will not pursue it here. The major point I wish to make is that in the case of marihuana, legal penalties were assigned to its use that are strict enough to ruin the life of a first-time offender, with total disregard for medical and scientific evidence of the properties of the drug or its effects. I know of no clearer instance in which the punishment for an infraction of the law is more harmful than the crime.

I would like to make my professional position very clear in this regard, Mr. Chairman.

I do not, at this time, advocate the removal of all restrictions on the use of marihuana. I believe that until we know more than we now do about the long-term effects

of marihuana and other forms of *Cannabis* that use of the drug should continue to be controlled—medically speaking, I cannot give it a clean "bill of health." *But*, penalties for its use should be lowered, in proportion to the danger and risk to the individual and society of this drug.

Marihuana can be for some, potentially, a dangerous drug. Generally it is a mild drug, in comparison with other hallucinogenics such as LSD, or with certain amphetamines and barbiturates. To equate its risk—either to the individual or to society—with the risks inherent in the use of hard narcotics is—on the face of it—merely an effort to defend an indefensible, established position that has no scientific basis.

It is quite understandable that law enforcement officials are concerned with the misuse of marihuana. So are physicians, educators and scientists. But the *degree* of concern must now—at long last—be equated with the degree of mental and physical risk. For too long, the fantasies surrounding marihuana, whether fostered deliberately or through ignorance, have clouded the facts.

I would like to mention some of them here, because fallacy can only give way to fact if each is recognized for what it is.

MARIHUANA

Fable 1: Marihuana is a narcotic.

Fact 1: Marihuana is not a narcotic except by statute. Narcotics are opium or its derivatives (like heroin, and morphine) and some synthetic chemicals with opium-like activity.

Fable 2: Marihuana is addictive.

Fact 2: Marihuana does not cause physical addiction, since tolerance to its effects and symptoms on sudden withdrawal does not occur. It can produce habituation (psychological dependence).

Fable 3: Marihuana causes violence and crime.

Fact 3: Persons under the influence of marihuana tend to be passive. It is true that sometimes a crime may be committed by a person while under the influence of marihuana. However, any drug which loosens one's self-control is likely to do the same and relates primarily to the personality of the user.

Fable 4: Marihuana leads to increase in sexual activity.

Fact 4: Marihuana has no aphrodisiac property.

Fable 5: Marihuana is harmless.

Fact 5: Instances of acute panic, depression, and psychotic states are known, although they are infrequent. Certain kinds of individuals can also become overinvolved in marihuana use and can lose their drive. We do not know the effects of long-term use.

Fable 6: Occasional use of marihuana is less harmful than occasional use of alcohol.

Fact 6: We do not know. Research on the effects of various amounts of each drug for various periods is under way.

Fable 7: Marihuana leads to heroin.

Fact 7: We know of nothing in the nature of marihuana that predisposes to heroin abuse. It is estimated that less than 5% of chronic users of marihuana go on to heroin use.

Fable 8: Marihuana enhances creativity.

Fact 8: Marihuana might bring *fantasies* of enhanced creativity but they are illusory, as are "instant insights" reported by marihuana users.

Fable 9: More severe penalties will solve the marihuana problem.

Fact 9: Marihuana use has increased enormously in spite of the most severely punitive laws.

Fable 10: It is safe to drive while under the influence of marihuana.

Fact 10: Driving under the influence of any intoxicant is hazardous.

EFFECTS OF MARIHUANA

Of all those who have tried marihuana, about 65 percent are experimenting, trying the drug from one to ten times, and then discontinuing its use. Some 25 percent are social users, smoking marihuana on occasion when it is available, usually in a group context. *Ten percent* or less can be considered chronic users who devote significant portions of their time to obtaining and using the drug. The effects of marihuana vary with the potency of the agent, the psychological set of the user, and the setting in which use takes place. Thus, it has been estimated that half of those who use marihuana the first time experience no effects at all.

The *chronic* user of marihuana or "Pothead" may encounter a number of psychological problems. If he is using it to escape life stress, his mental growth is impaired by not learning how to deal with frustration and problems. He tends to withdraw from here-and-now reality, loses ambition and drive, and sustains a loss of motivation. He is present-oriented rather than future-oriented. He may drop out of active involvement in school or work.

Further research is needed to elucidate more clearly both the short and long-term effects of marihuana use. The absence of good scientific data should not lead to the assumption that long-term use is harmless. As in the case of tobacco, it is possible that there are serious consequences of chronic use which will only become apparent through careful longitudinal studies.

One needs to be particularly concerned about the potential effect of a reality-distorting agent on the future psychological development of the *adolescent* user. We know that normal adolescence is a time of great psychological turmoil. Patterns of coping with reality developed during the teen-age period are significant in determining adult behavior. Persistent use of an agent which serves to ward off reality during this critical developmental period is likely to compromise seriously the future ability of the individual to make an adequate adjustment to a complex society.

Despite our acknowledgedly scanty information on adverse effects, there is reason to believe that the marihuana user is exposed to an increased risk of either acute or chronic psychologic damage each time he lights a marihuana cigarette. Though the incidence of serious adverse reaction appears to be low, by definition as the number of users increase, the total number of those experiencing adverse reactions will also rise. The effects of the drug on judgment and perception might very well be a factor in automobile accidents. Those users who already have significant psychiatric problems might readily be led to avoid obtaining necessary psychiatric treatment by this form of self-medication, only to wind up as one of the group of users whose entire life becomes absorbed in the drug culture.

It is obvious, therefore, that there are some things we already know about marihuana, in spite of the fact that many people are unwilling to accept this knowledge.

A youngster who smokes one marihuana cigarette is not a dope fiend, even though misguided individuals in the past have made this association.

There is probably not a single youngster today who believes that smoking one marihuana cigarette will automatically lead him to perdition.

In this situation, it is extremely unfortunate that by the continued, exaggerated emphasis on the supposed dire evils of marihuana smoking, we make it extremely difficult to tell people what the real risks of use of specific kinds of drugs are. And there is no doubt that we have already built up in the new generation some of what people of our age absorbed in the days of the Volstead Act. The prohibition syndrome, as applied to marihuana, has already brought about defiance of these specific laws; additionally, it has created in the new generation a credibility gap concerning other laws and law enforcement.

This Committee, Mr. Chairman, is considering various legislative proposals. Other proposals designed to improve control of drug abuse are also before the Congress and have been assigned to other Committees.

I would like to discuss the elements in both the proposals under consideration by this Committee which I would hope to see enacted, and the elements in both that I think could be improved.

I would not favor adoption of either proposal in its present form, without further consideration of medical and scientific data, as well as further consideration of statements made by judges, probation officers, prison officials and others who oppose mandatory minimum penalties on drug offenders.

The principle and the effects of mandatory penalties defeats the whole purpose of treatment and rehabilitation of drug users; it unnecessarily limits the courts and negates the traditional American expectancy that each individual will be heard by a court of law in terms of his intent, the circumstances of his alleged offense, and his potential ability to be rehabilitated.

As a result of my professional experience with drug users sentenced by the courts, I am convinced that the social and psychological damage caused by incarceration is in many cases far greater to the individual and to society than was the offense itself. Each case of drug abuse must be decided separately, from the legal as well as the medical point of view.

From this standpoint, I would favor provisions which would make possible a definite scientifically based determination of the dangers of marihuana use and of the properties of the drug itself.

In regard to the procedures suggested for placing dangerous drugs in specific schedules or classes, I prefer flexible provisions which allow for changes in the class or schedule of a drug, as additional knowledge of that drug becomes available.

Proposals have been made that in establishing drug standards and schedules, the authority to designate rests with the Attorney General. He would be required to request the advice in writing from the Secretary of Health, Education, and Welfare and from a Scientific Advisory Committee.

Whether a substance should be added, deleted or rescheduled as a dangerous substance.

I have two main points to make here, Mr. Chairman. First, it would be preferable to specifically list the professional disciplines of the members of the Scientific Advisory Committee to be involved in decisions about scheduling dangerous substances.

There are nine criteria to be considered with respect to each substance of which the first seven are primarily within the professional competence of the medical, scientific and public health disciplines. The remaining two are primarily legal. Therefore, it would be wise to have the makeup of the committee such that its membership would have professional competence to gauge the criteria.

Changes in scheduling drugs in any piece of legislation can only have real meaning if they are based on research findings. My second point in this regard, therefore, is that social and psychological research on the use and abuse of drugs should remain a medical and health responsibility so that scientific credibility can be established.

As President Nixon has said, "In addition to gathering existing data, it is essential that we acquire new knowledge in the field. We must know more about both the short and long-range effects of the use of drugs being taken in such quantities by so many of our people. We need more study as well to find the key to releasing men from the bonds of dependency forged by any continued drug use.

"The National Institute of Mental Health has primary responsibility in this area, and I am further directing the Secretary of Health, Education, and Welfare to expand existing efforts to acquire new knowledge and a broader understanding in this entire area."

Similarly, drug abuse education in schools and for health professions should continue to be the responsibility of the health professions. We have long been involved in such education programs and public response to the expanded drug education pamphlets, TV and radio spots and other visual materials indicate that when youngsters get facts instead of hysteria, they pay attention to this information.

The Department of Justice should, of course, have responsibility for the training and education of enforcement personnel, but today's youth are unlikely to accept information on drugs presented by enforcement officials.

I am hopeful that relevant, factual educational programs will begin to become significantly effective in curbing the indiscriminate abuse of all drugs as it has been in reducing LSD use.

No matter what legal reforms are undertaken, this task will be difficult, because the whole problem has gotten out of hand, and the smoking of marihuana has become an accepted fashion among millions of our citizens.

In this situation, the first place in which legal reforms can be made is in the removal of mandatory minimum penalties, in all cases of drug abuse.

I agree with you, Mr. Chairman, as you stated at the White House Conference on Narcotics and Drug Abuse in 1962, that the time has come to correct the mistake that was made with the passage of the Narcotics Control Act of 1956. This Act radically departed from the existing trend in criminal legislation—a trend toward individual treatment of convicted offenders with a view to their eventual rehabilitation.

The Act has deprived Federal judges of discretion in sentencing and requires consideration of an individual defendant on a class basis, rather than in response to his specific circumstances.

If mandatory sentences really were deterrents to criminal conduct, then there would be little justification for limiting them only to narcotic and marihuana offenders.

Mandatory sentences bear little or no relationship to the public good, to public health or to mental health.

I think it important that the record of this Committee's current hearings include the results of the questionnaire that the *Chairman* of this Committee included in the proceedings of the White House Conference on Narcotics and Drug Abuse.

As a joint project of the Senate Subcommittee on Juvenile Delinquency and National Penitentiaries, the questionnaire was sent to Federal district judges, Federal chief probation officers, Federal prison authorities and U.S. attorneys, inquiring into the effects of the mandatory minimum sentence provisions, and the elimination of probation and parole in the handling of narcotics offenders.

The results of the survey showed that approximately 75 percent of all those who responded—people who lived with this law from day to day—opposed these two basic provisions of the Act.

James V. Bennett, former Director of the Federal Bureau of Prisons, has stated "there is a real danger that, in the effort to contain the problems which stem from the hopelessness characterizing the attitudes of men with mandatory sentences, much of what has been achieved in the development of constructive programs for all types of prisoners may be wiped out."

I am strongly in favor of the specific recommendations of the Prettyman Commission, made in 1963, in its report to the President. Any legislation designed to control drug abuse should include in its provisions the concepts and recommendations of that Commission.

Its report stated:

"The Commission makes a flat distinction between the two drugs (narcotics and marihuana) and believes that the unlawful sale or possession of marihuana is a less serious offense than the unlawful sale or possession of an opiate.

"The Commission believes that the sentencing of the petty marihuana offender should be left entirely to the discretion of the courts. There should be no mandatory minimum sentences for marihuana offenders and no prohibition of probation or parole.

"The courts should have the discretion to impose a fixed sentence (with eligibility for parole), to suspend sentence, or to impose an indeterminate sentence. The Commission is opposed to mandatory minimum sentences even in the case of multiple offenders."

If one considers the actual application of mandatory penalties when, for example, a twenty-one-year-old College Junior who gives a Freshman a marihuana cigarette and then is subject to a *mandatory* ten years in jail, the scene become *absurd* in relation to the size of the problem as well as tragic for the individual person.

A *conservative* estimate of persons in the United States, both juvenile and adult, who have used marihuana at least once is about 8 million and may go as high as 12 million people.

Can you imagine what would happen to the law enforcement and corrections system of this country if each of these 12 million people had been caught by a policeman when smoking his first marihuana cigarette?

It is no wonder that law enforcement officials reportedly stay away from rock festivals and other gatherings where the marihuana smoke hangs heavy in the air and proof of possession is very easily come by.

It is time to change from a prosecution to a public health approach in dealing with drug abuse and especially in cooling the marihuana problem, and I can only repeat what I said 18 months ago to this Committee. If we are to get to the root of this problem of drug abuse, we must be prepared to identify and investigate the underlying problems which lead people to distort or ward off reality with drugs.

Until this is done, nothing said here today will achieve much more than to begin to solve the problem on paper. And since the problem is far more than a "paper tiger", we are faced with the fact that Americans must make a conscious decision relating to their acceptance or rejection of the use of dangerous drugs.

Even if it is found that there are no dire physiological effects of marihuana-smoking, the problem still remains and a decision still has to be made by our society.

To protect the few who are oversensitive to the drug, will society restrict the use of this substance by the many?

Or, in the light of scientific information, our society may choose to remove restrictions and allow the individual to decide.

In my professional judgment, Mr. Chairman, even though marihuana is certainly not the horror it was alleged to be in 1937, it *is* a drug having a capacity to alter mood, judgment and functional ability. For these reasons, I believe that in the interests of public health, it is necessary—at least for the present—to maintain restrictions on the availability and use of this drug.

Although there are several pathways toward alternative, conscious decisions, any valid decision, I am convinced, must involve the scientific fact of the amount of public danger which exists, and the specific range of risk involved in the use of each drug.

If one-half-of-one percent of the population is at risk, the decision could certainly be different from a situation in which from 10 to 20 percent of the population is at risk.

The most obvious pathways to decisions which must be made very soon, if the uproar over drug abuse is to achieve any significant and acceptable results, are through legal reform and through education.

In considering both of these, however, the time has certainly come to substitute a broad and realistic look at our American society for the tunnel vision on which our legal and moral attitudes to drug use have been founded until now.

We all know, for example, that marihuana-smoking is more than a fad. It is linked with student contempt for the Establishment.

Marihuana-smoking has become a symbol of rejection of things as they are, as well as a sometimes pleasurable experience in itself.

The Chairman of the House Interstate and Foreign Commerce Committee, Mr. Staggers, in commenting on the need for new legislation, said, "Unfortunately, ours seems to be, for many of our citizens, a drug-oriented, drug-taking society. Hourly, television and radio commercials assault our ears extolling the virtues of various drugs. . . . Perhaps this overall orientation contributes to drug abuse among the young.

"Perhaps the problem lies deeper. Our national rate of suicide, alcoholism, violent crime and divorce indicates that a substantial number, and perhaps the majority, of Americans find their social and human environment something less than satisfactory.

"Whether we call it anomic, alienation, or excessive concentration on material values, this dissatisfaction may lie closer to the surface in many than they would be willing (or perhaps psychologically able) to admit. If so, it seems unlikely that laws alone can accomplish what is needed, although increased research on a very fundamental level may point the way."

Dr. Dana Farnsworth, Director of University Health Services at Harvard University and Chairman of the American Medical Association Council on Mental Health, speaking at a meeting of the American Medical Association, said, "Until now, the official attitude has been 'Stamp out drug use and you'll get rid of the problem.' But the use of drugs is not the central problem—it is only a symptom, an index of the confusions and uncertainties which affect increasing numbers of young people.

"Unenforceable laws and inappropriate penalties make a mockery of the whole principle of legal control and provide one more example of the adult world's misunderstanding of the problem."

A 22-year-old former drug addict, it seems to me, expressed a rare depth of perception when he said that the problem "is a problem neither of youth nor one of drugs, but a problem of a whole society and an entire life style shared by young and old alike."

Our life style, in the 1970's, will be characterized by our ability or inability to use

the products of our technical ingenuity to help bring about our happiness and well-being.

The current patterns of drug abuse are illustrative of our inability to make the results of our technological skills work for us as servants, rather than as masters.

As science continues to offer an ever-widening choice of chemicals designed to modify emotions and behavior and to enable us to cope with our environment, ways are being found to use them detrimentally. Our ingenuity, to date, has outrun our wisdom; we have yet to find the restraint to limit ourselves to constructive uses of these products.

The first place in which legal reforms can be made is in the removal of mandatory minimum penalties in all cases of drug abuse.

If this were done, it is quite possible that this one, major step toward accommodating the law to the realities of drug use might also initiate a stepping-stone toward a greater respect for the law generally, if those laws were just and relevant.

Such a legal reform would eliminate one of the major causes of defiance brought on by the violent rejection by youth of what they see as our society's hypocrisies. And certainly, such a reform would capture the attention and, I am sure, a large amount of cooperation among the young people who smoke marihuana, as well as their parents, their teachers, and the courts.

If these millions of young people were convinced that efforts to reform the drug laws were sincere and based on scientific fact and evidence, I feel confident that they would be more receptive and less cynical about information about possible harmful effects of drugs.

There is no doubt about the scare techniques which have been used in the past have now been discredited. And the resultant disbelief in much of the information provided by any persons in authority on many subjects should teach us that the *abuse of known information* is worse than the lack of any information at all.

In our search for information about man's behavior, many of us at the National Institute of Mental Health are relating the problems of some types of drug abuse to a more general question. What is the best way of handling "crimes without victims"—those situations in which an individual at most, is harming himself?

Do these belong in the criminal code, or should they be handled in another way?

This is a philosophy, in considering man's conduct, that is worthy of serious research and discussion.

As an intial step toward fundamental changes which must be forthcoming in changing the rules of our way of life, the members of Congress and others who share the authority to do so have an immediate opportunity to revise the procedures for punishment. Society can then begin to devise procedures for protection, acceptable not only to tradition but also to our restless, rebellious, but *thoughtful* young people who have had enough of rhetoric and empty promises.

MEDICAL RESEARCH SACRIFICED FOR MILITARY RESEARCH

Mr. YARBOROUGH. Mr. President, yesterday the Washington Evening Star published an article entitled "Medical Research Loses to Missiles." The article deserves the attention of Members of Congress, and of everyone else who reads the CONGRESSIONAL RECORD.

The writer, Orr Kelly, is an experienced military correspondent. He has often written of the relationships and activities of the Pentagon as they relate to civilian interests and to the economic base which supports the $80 billion annual military expenditure.

In this story, Mr. Kelly pinpoints the increases in research for military hardware and so-called defense systems. One is the $5.7 million contract just awarded for, and I quote: "Pershing missile component and power station research and development."

This is not a search for a new system. According to the Department of Defense, it is "part of a program to continually improve the Pershing system." The Pershing system is the largest nuclear weapon of the U.S. Army, a portable ballistic missile with a 20-kiloton warhead.

What Mr. Kelly describes as "the other side of the trade off" is a cut in five other research programs on how to apply medical science to the illnesses of the American people. One project to be eliminated is the pap smear test that detects uterine cancer—one of the largest causes of death among American women.

Another is a heart study aimed at foretelling heart attacks. Another is the neurological and sensory disease program including widespread testing for glaucoma; and another deals with chronic respiratory diseases and diabetes and arthritis.

Mr. Kelly states:

Cutting out the five programs is expected to save $9 million in the full 1971 fiscal year. Spending on Pershing is expected by industry sources to total some $16 million over the next four years, mostly for relatively minor improvements to equipment already deployed.

Mr. President, neither of these research programs is intended to accomplish some great breakthrough, either in military science or medical science. In each case, we are talking about application of something already known. In the case of medicine, however, treatment is of little value without detection and diagnosis.

This brief story aptly summarizes the tragic decisions that are taxing the American people for the support of weaponry and military science at the expense of the betterment of life, health, and environment of the American people. That conclusion is my own, not Mr. Kelly's. In support of it, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Oct. 20, 1969]

MEDICAL RESEARCH LOSES TO MISSILES

(By Orr Kelly)

This is the story of a tradeoff—not a conscious one, but something that just happened in the Nixon administration's effort to cut its 1970 budget.

On one side is $5.7 million for improvements in an 11-year-old Army missile system.

On the other are cuts totaling $4 million in five health research projects—including one that was just about to pay off after 20 years of careful record keeping.

On the spending side, the Defense Department, in a routine, five-line announcement, said recently that the Army was awarding a $5.7 million contract to the Martin Marietta Corp. in Orlando, Fla., for "Pershing missile component and power station research and development."

The Pershing, first ordered in 1958, is the Army's biggest nuclear weapon. It is a portable ballistic missile with a range of 400 miles and a choice of nuclear warheads that start about the size of the 20 kiloton Hiroshima bomb and range upward in size.

"Pershing is capable of providing fire support for the theater, as well as general support for the field Army," according to a brochure handed out by company and Army men where the Pershing was displayed outside the Sheraton-Park Hotel during the meeting of the Association of the U.S. Army last week.

"Through maneuver of the batteries in a battalion, commanders possess a powerful means of influencing the course of combat and can deliver nuclear fire over a zone of great width and depth, shifting and concentrating fire according to the situation."

The Pershing, first deployed in Europe in 1964, is now in its second generation. The missiles are being switched over from tracked to rubber-tired vehicles for greater mobility.

The Defense Department, asked why additional research and development was required in a missile that has been in the hands of troops since 1962, replied:

"The contract award is a part of a program to continually improve the Pershing system. It amounts to product improvement, to improve the maintainability and reliability of missile components and power stations."

On the other side of the tradeoff is the decision of the Health Services and Mental Health Administration (formerly the U.S. Public Health Service) to cut out five programs designed to find ways of putting the findings of research scientists to work in practice.

The projects to be cut out—by the end of 1969 rather than by the end of the fiscal year—are the pap smear test program conducted in cooperation with the Academy of General Practice to detect uterine cancer in women; the Framingham, Mass., heart study which, after 20 years, was getting to the point where it might tell why some people suffer heart attacks and others don't; the neurological and sensory disease program which includes a widespread program of testing for glaucoma, a disease that can cause blindness if it is not detected in time; and programs dealing with chronic respiratory diseases and diabetes and arthritis.

Cutting out the five programs is expected to save $9 million in the full 1971 fiscal year. Spending on Pershing is expected by industry sources to total some $16 million over the next four years, mostly for relatively minor improvements to equipment already deployed.

AMERICAN POW'S IN KOREA AND AMERICAN POW'S IN VIETNAM

Mr. DODD. Mr. President, the fate of the American POW's in Korea makes it of the greatest importance that we accord top priority in the Paris negotiations to the question of the American POW's now in the hands of North Vietnam.

Of the 7,100 Americans taken prisoner in Korea, 3,354 died in captivity, while another 389 are still listed as missing.

A resolution adopted recently by the Lucas County Council, American Legion of Ohio, points out that there is reason to believe that some of these 389 American servicemen may still be alive, and urges Congress and the President to take appropriate action to bring about their repatriation.

I do not know whether it is humanly possible at this late date to do anything about the American POW's who may have survived almost 20 years in Communist captivity. However, I do believe that the experience in Korea is something that we should constantly keep in mind in our negotiations with the Vietnamese Communists.

In retrospect, it is obvious that we should have taken a harder line on the American POW issue in Korea from the first day of negotiations. At that time, the Communists desperately wanted a cease-fire. They wanted it so desperately indeed that, had we made an immediate exchange of all POW's a precondition for a cease-fire, there is reason to believe that they would have accepted the condition.

I do not like to be a pessimist, especially where the lives of men are involved. But in the light of the Korean experience, I think it should be obvious that if we leave the question of the American POW's until the end of the negotiations, many of those now in captivity will never return to America alive.

It is my conviction, therefore, that we should raise this matter at every single meeting with the Communist negotiators in Paris; that we should place the issue before the court of world public opinion, mobilizing all of our diplomatic resources and information facilities in the interest of arousing world opinion; and that we should not hesitate, if necessary, to warn of stronger measures if the Communists refuse to agree to the elementary, humanitarian request that they abide by the Geneva Convention on the treatment of POW's.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of the resolution adopted by the Lucas County Council, the American Legion of Ohio, at a regular meeting on June 2, 1969, in Toledo, Ohio.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

KOREAN PRISONERS OF WAR

Whereas, Many of the 389 American servicemen unaccounted for since the Korean War were known to be alive and in prisoner of war camps of the Communists, and

Whereas, Recurring stories appear in magazines (Argosy, 1959—Saga, 1964) that America has abandoned these men into Communist slavery, and

Whereas, President Dwight Eisenhower stated at a news conference in 1959 that "we have had a long, serious, and even continuing discussion with the Chinese Communists trying to make them disclose where our prisoners were held" and "there are still some left there", and

Whereas, President John F. Kennedy stated at a news conference in 1961 that Chinese Communists were detaining Americans, "some of them way back since 1951", and

Whereas, there has been absolutely no evidence of the death of any of the 380 servicemen,

Now, therefore be it resolved, that Lucas County Council, The First District, the Department of Ohio, and the National American Legion call upon all Senators, Congressmen, and the President to take appropriate action to effect the repatriation of these servicemen.

CLEMENT P. DOMBROWSKI,
County Commander.
LOU L. STEPHENS,
Acting Adjutant.

EDUCATION AND LIBRARY PROGRAMS SUFFER UNDER CONTINUING RESOLUTION

Mr. HART. Mr. President, because of unusual circumstances, important on-going education and library programs are not currently receiving funds under the existing continuing resolution passed by the Senate on June 25 and signed by the President on June 30—Public Law 91–33.

The tradition has been that continuing resolutions provide funds for on-going programs at the level of the previous year's appropriation or at the current year's level in a bill approved by either House, whichever is lower. Only when neither House has passed the current year's appropriations bill does the President's budget recommendations apply, and then only if such recommendations are lower than the previous year's appropriation. To cite an official explanation, let me quote from the House Appropriations Committee Report No. 91–324 on the current continuing resolution which expires October 31, 1969:

This is the customary type of resolution brought before the House on the eve of the new fiscal year to avoid interruption of continuing governmental functions. The authority conveyed by this resolution is necessary to provide for the interim between June 30 and final approval of the applicable annual appropriation acts for the fiscal year 1970, which begins on July 1, next.

The resolution follows the basic form and concept of similar resolutions of past years. Last year's initial continuing resolution became Public Law 90–366, approved June 29, 1968.

TIME PERIOD OF THE RESOLUTION

The time period covered by the accompanying resolution is limited to the four-month period, July 1–October 31, 1969. Anything shorter than that is judged to be unrealistic, especially since the membership is proceeding under the announced plan of a mid-August recess extending beyond Labor Day, and the further fact that large segments of the budget have not been authorized by the Congress.

SCOPE OF THE RESOLUTION

Comporting with continuing resolutions over a period of many years, including last year, the emphasis in the resolution is on the *continuation of existing projects and activities* at the lowest of one of three rates, namely, the current (fiscal year 1969) rate; the budget request for 1970 where no action has been taken by either House; or the more restrictive amount adopted by either of the two Houses.

Thus in the normal course of events, after the House had passed the Labor-HEW appropriation bill—H.R. 13111—on July 31, there would have been, probably by the end of August or certainly by the end of September, another continuing resolution which would have placed all Labor-HEW programs on the basis of the lower fiscal 1969 or H.R. 13111 as it passed the House. However, because of the scheduled recess in August, the current continuing resolution was introduced in June to continue to October 31, and several important educational programs are being funded on an interim basis not at the lower of H.R. 13111 or 1969 funding, but at the level of the President's budget. There are, under the present continuing resolution, no interim program funds authorized for:

Category B, students under Public Law 874;

Title II ESEA, school library materials;

Title III NDEA, materials and equipment for elementary and secondary schools;

Title V-A NDEA, guidance and counseling;

Title II LSCA, public library construction.

In addition, interim, funds for other programs such as public library services and title I of ESEA are authorized on a level considerably lower than fiscal 1969 or H.R. 13111.

It is my understanding the several joint resolutions have been introduced in the House, proposing that this problem be corrected by amending the current continuing resolution to provide interim funding for Office of Education programs at the level of last year's appropriation on H.R. 13111, whichever is lower. An alternative would be for the appropriations committee to bring in a complete new continuing resolution in the traditional form in place of Public Law 91–33 without waiting for the end of October. This would provide that on-going programs in all appropriations bills, including H.R. 13111, which had passed ether house, be funded on the basis of the 1969 level or the current year's bill, whichever is lower. In this way important on-going education programs on which local school districts and other education and library institutions must depend can receive the funds whch they have had a right to expect when the House passed H.R. 13111 July 31.

Should the House take affirmative action to make this possible, I would assume the Senate Appropriations Committee will give immediate attention to this very urgent matter.

Mr. President, I ask unanimous consent to insert in the RECORD at this point a set of tables showing, by State, the amounts the education and library programs are receiving under the Nixon budget and how much these programs would receive under H.R. 13111 or last year's level of appropriations.

The figures were compiled by the Emergency Committee for Full Funding of Education Programs.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

OBLIGATIONS IN THE STATE OF ALABAMA

Program	Actual, 1968	Estimate, 1969	Estimate, 1970	Nixon estimate, 1970	House passed appropriation bill
OFFICE OF EDUCATION					
Elementary and secondary education:					
Assistance for educationally deprived children (ESEA I):					
Basic grants	$37,773,357	$34,985,664	$38,198,857	$38,580,846	$44,504,965

ORDER OF BUSINESS

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Is there further morning business?

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS

Mr. PROXMIRE. Mr. President, I move that the Senate stand in recess until 1:30 this afternoon.

The motion was agreed to; and (at 1 o'clock and 7 minutes p.m.) the Senate took a recess until 1:30 p.m.

On the expiration of the recess, the Senate reassembled, and was called to order by the Presiding Officer (Mr. CRANSTON in the chair).

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate stand in recess, subject to the call of the Chair, with the understanding that the recess will not extend beyond 2 o'clock p.m. today.

(At 1 o'clock and 31 minutes p.m., the Senate took a recess subject to the call of the Chair.)

At 1 o'clock and 55 minutes p.m., the Senate reassembled, when called to order by the Presiding Officer (Mr. THURMOND in the chair).

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

LEGISLATIVE BRANCH APPROPRIATIONS, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business, Calendar No. 476.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The BILL CLERK. A bill (H.R. 13763) making appropriations for the legislative branch for the fiscal year ending June 30, 1970, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

The PRESIDING OFFICER. The Senator from New Mexico is recognized.

Mr. MONTOYA. Mr. President, the pending bill before the Senate, the legislative branch appropriations bill for fiscal year 1970, H.R. 13763, provides funding to support the activities and functions of the Senate, the House of Representatives, the Architect of the Capitol, Botanic Garden, Library of Congress, Government Printing Office, and the General Accounting Office. The total of the bill is $344,060,817. We will observe from the table on the first page of the report that this sum is $59,536,760 over the bill as it passed the House of Representatives in September. Of the total recommendations of the Senate committee, $59,631,260 represents Senate items, including the Senate Office Buildings, which were not considered by the House nor included in the House bill. In summary, exclusive of these Senate items, the bill is $94,500 under the House version of the bill. This reduction was effected due to the delay in processing this bill through Congress this year. The House had provided for funding of new positions on a 9-month basis, whereas the recommendations in this bill provide funding on an 8-month basis. A copy of the bill and report is before us. A comparative table showing, by line item, the appropriations for fiscal year 1969, the budget estimates for fiscal year 1970, the House allowances, and the amounts recommended by the Senate committee is printed at the conclusion of the report.

In my statement here today, it is my purpose to highlight the recommendations, calling attention to items of particular interest or of possible controversy following which I will attempt to answer questions any Senator may have as to details or other information elicited from the hearings or justifications.

Over a year ago, in July of 1968, the Committee on Appropriations directed that a study be made of senatorial allowances by the Subcommittee on Legislative Appropriations, the Committee on Rules and Administration, and the Select Committee on Standards and Conduct. It was the intent of the committee, in making such a recommendation, that senatorial allowances be adjusted so that it would not be necessary for Senators to rely upon contributions for their official office expenses. These three groups, as a special committee, conducted this study and unanimously recommended the increased allowances I am about to describe, with the exception of trips home for Senators, which I will discuss later.

These recommendations are explained in some detail commencing on page 4 of the report but, briefly, they are as follows:

The committee recommends an increase in the clerk-hire allowance for each Senator in the amount of $23,652. This will permit the employment of one additional person at a not-to-exceed rate of $23,652, or for several additional employees at lower rates within this sum.

With respect to Senators' transportation, the special committee had recommended that the number of round trips to home States for Senators be increased from six to 12 trips per annum. In addition, and in order to simplify accounting procedures, it recommended that the cost of a round trip be calculated at 12 cents per mile from Washington to the residence city of the Senator in the State, and that the total of this sum, multiplied by 12, should be the ceiling per year for the 12 trips. This dollar allowance, thus arrived at, would have permitted the Senator to schedule travel to his home State, and within the State, up to the limit of this ceiling and to have been reimbursed for such travel on the basis of actual vouchers submitted. Also, by use of the dollar ceiling, it would have, in fact, allowed more than 12 trips per year if economy accommodations were utilized. But it would have relieved administrative difficulties which are increasing each year in the processing of reimbursement vouchers. However, the full Committee on Appropriations did not approve this recommendation and, consequently, the bill before the Senate amends existing travel language to permit 12 round trips per year in lieu of the six authorized heretofore.

For employees' mileage, it is recommended that eight home State trips in offices of Senators from States with less than 10 million population, and 10 trips in offices of Senators from States with 10 million population or more, be allowed. The new authorization also permits the payment of mileage to Senators' employees traveling from the State to Washington and return—within this limitation, of course.

For office expenses in the home State, an increase of from $300 to $400 each quarter is recommended. Language has been inserted in the bill to provide reimbursement under this appropriation for newspaper, magazine, and periodical subscriptions, including the purchase of news clipping services. This provision applies to all Senators, whether offices are maintained in the home State or not. By way of further clarification, I should state that this permissive use to buy newspaper, magazine, and periodical subscriptions has to come out of the $400 quarterly allowance and is therefore raising this particular reimbursement limitation.

With respect to additional long-distance telephone service, the committee has authorized the installation of a WATS line for each Senator's office, if so desired by him, and provided such Senator surrenders 50 percent of his existing long-distance allowance presently computed in calls and minutes. Complete details concerning the advantages and limitations of this system are discussed in the Senate hearings commencing at page 428. In connection with this phase of its study, the special committee agreed that no change would be proposed in the telegram allowances until after the installation of the WATS service, when it might be appropriate for the Committee on Rules and Administration to reevaluate this allowance.

It is recommended that the stationery allowance for each Senator be increased by $600 per annum from the present $3,000. The committee's decision to provide this increase was based on the requests of many Senators that continuous letterheads, manifold sets of carbon and tissue, and other carbon paper be provided through the paper allotment rather than as a charge against the stationery account. However, as there is no authority in existing law to accomplish this, the committee recommended the additional $600 per annum for the purchase of any such authorized stationery supplies through this account. If any amount is unused in this account, of course, under the Williams amendment to a prior bill, the balance would revert to the Treasury.

As for increases in the paper allotments, the committee has been advised that the Joint Committee on Printing will review this matter in detail. Also, it is suggested in the report that the Committee on Rules and Administration study further the advisability of additional allowances for mechanical equipment, now charged against a Senator's clerk-hire allowance.

That concludes the summary of allowance recommendations provided in the

bill, Mr. President; and I will now proceed to a general discussion of other Senate items as well as appropriations for the Library of Congress, Government Printing Office, and the General Accounting Office.

The committee has provided the sum of $106,930 for the offices of the majority and minority leaders, which will finance one legislative assistant position at not to exceed $28,908 per annum and one executive secretary at not to exceed $15,111 per annum. In addition, two other positions already authorized have their titles changed—one, to an administrative assistant at not to exceed $31,317 in place of a research assistant, and the other, a clerical assistant at not to exceed $12,921 per annum, instead of a clerk at $8,979 per annum, an increase in compensation.

For the offices of the majority and minority whips, language and funds have been included in the bill so as to fix the compensation of an administrative assistant at not to exceed $30,003 per annum and an executive secretary at not to exceed $15,111 per annum for each of the whips' offices. This proposal merely provides for a higher rate of pay for not to exceed two employees, already authorized.

At the request of a special bipartisan committee, appointed at the beginning of the 91st Congress, the committee has included language in the bill adjusting the compensation of the Chaplain of the Senate to approximately $10,000 per annum, and has provided funds and authority for him to employ and fix the compensation of a secretary at not to exceed approximately $8,500 per annum.

For the office of the Secretary, the committee has approved an appropriation of $1,675,448. Three positions which have been carried on the administrative roll for several years have been transferred and made regular positions under the office of the Secretary. This does not increase the number of positions, nor does it increase the amount of appropriations.

The committee has created a new position of Comptroller of the Senate, with a salary of $35,259 per annum. This action was taken by the committee in recognition of the superior service rendered to the Senate by Mr. Robert A. Brenkworth, who has held the position of financial clerk for many years. Mr. Brenkworth's duties have encompassed a great deal more than those of a financial clerk. As expenditures of the Senate have grown to in excess of $50 million annually, it was the opinion of the committee that a fiscal operation was required which would embrace all disbursing activities and related responsibilities. In the report on page 7, the committee has requested the Secretary of the Senate to examine into the operations of the Senate which are fiscal in nature, with a view toward transferring to the new comptroller position such functions as should properly fall under the jurisdiction of such an officer.

Under the appropriation head, office of Sergeant at Arms and Doorkeeper, a total of $4,915,909 is recommended. Included in this sum are funds for five additional personnel to operate the new computer equipment in the service department. In this connection, $275,000 is included under miscellaneous items for annual rental on the new computerized equipment which had earlier been authorized by the Committee on Rules and Administration. I understand this equipment already has been installed. Language and funds have also been included under the Sergeant at Arms to correct an inequity in the salaries of six plainclothesmen on the Capitol Police force assigned to the Senate, making available an additional $438 per annum for each such officer.

Under the postage allowance, the committee has provided an increase of $96 per annum in the allowance for Senators from States east of the Mississippi River and $120 in the allowance for Senators from States west of the Mississippi River. This is necessitated by the 15-cent increase in special delivery stamps which went into effect July 14, 1969.

For the Joint Economic Committee, $447,165 is recommended. This is $36,000 above the House allowance and will provide for two additional professional positions at a salary of $23,283 each, and certain personnel reclassifications which were effected during fiscal year 1969 and which were not reflected in the original budget estimate for fiscal year 1970. As stated in the report, these funds are provided for the 8 months remaining of the fiscal year.

The total appropriation for the responsibilities of the Architect of the Capitol, which also include the Senate Office Buildings maintenance and construction work, and Library maintenance, construction, and equipment purchases, is $24,360,900. This is $15,594,100 under the budget estimates, but $4,793,600 over the House allowance. Of this increase, $125,000 represents the amount required to permit the Architect to proceed with the installation of the speech reinforcement system in the Senate Chamber, which was authorized by the Senate in Senate Resolution 167, agreed to April 15, 1969. A description of this system is printed at page 282 of the Senate hearings. Subject to the availability of the Chamber for such work to be performed, it is estimated that the installation could be completed within 3 or 4 months after the components are delivered.

The next item in the report is the extension of the west central front of the Capitol. The committee recommends the sum of $2 million, allowed by the House to enable the Architect to prepare detailed plans and specifications for extension of the west front of the Capitol Building. However, by language inserted in the bill, the committee directs that $250,000 of this sum be transferred to the National Park Service for the purpose of making a feasibility study, including estimates of costs, with reference to restoration, only, of the existing west central front of the Capitol. The remainder of the funds, $1,750,000, would be available as stated above, but with the proviso that in any agreements entered into, provision would be made for a progress payments procedure so that if the National Park Service report shows that restoration is feasible the Architect will have retained authority to suspend the plans and specifications agreement.

Under Capitol Grounds, the committee recommends $874,100, which is $32,000 over the House allowance and which is to be used to improve the surfaces and lighting in the Senate parking lots. This latter estimate was not submitted to the House for consideration.

For the Senate Office Buildings, a total of $3,310,000 is recommended. Of special interest will be the $28,000 provided for installation of the legislative light signals in the Old and New Senate Office Buildings, and $38,600 to commence a desk-replacement program in the Old Senate Office Building. Many of the original desks furnished when the building was new in 1909 are still in use, but are badly in need of replacement. This renewal program will extend over a 17-year period.

Also included in the appropriation is $28,000 for the replacement of obsolete equipment in the New Senate Office Building cafeterias. The equipment in question has been in operation since January of 1959, and with a normal useful life of approximately 10 years, this particular equipment has reached the point where it is no longer economically feasible to maintain and operate. The larger items of replacement are a dishwashing system at $18,500, a patty maker at $1,600, six trucks for dish transportation at $449 each, a proof cabinet for the bakery at $1,600; and four coffee urns at $650 each.

In addition, funds on an 8-month basis have been included for the employment of a full-time bricklayer—at an annual rate of about $9,000—now employed on an hourly basis.

Another increase over the House allowance which the committee recommends is $1,250,000 for the acquisition of all real property in the east half of square 725—land adjacent to the New Senate Office Building—with the exception of property on which the Belmont House is located. The language in the bill provides also for demolition and removal of the buildings or other structures to be acquired and, pending demolition, for immediate use by the Government or lease in lieu thereof. In view of rapidly rising land costs and the need for the site for future construction of an extension to the New Senate Office Building, the committee believes the property should be obtained as quickly as possible. Authorizing legislation for the extension of the Senate Office Building site passed the Senate on October 8 of this year.

The committee has also included funds for initial funding for the Library of Congress James Madison Memorial Building. The Library has reached the maximum capacity of its present buildings. Rental costs in leased space elsewhere in the area are estimated to approximate $1.7 million for the fiscal year, and without a resolution of the space problem quickly, additional rental costs can be expected in future years.

The initial estimate for constructing the Madison Library Building was $75

million in 1967. Costs have now escalated to the point where this estimate has been revised upward to $90 million. A breakdown of these costs may be found on page 300 of the hearings, and on page 294 is a description of the building with space allocations designated. Legislation increasing the authorized cost of this building to $90 million passed the Senate just last week—on October 15. The committee, therefore, has concurred with the action of the House of Representatives and has recommended $2,800,000 of the amount requested for plans and specifications and related expenses.

For the operations and activities of the Library of Congress, the committee recommends a total appropriation of $43,856,300, which is $30,500 under the House allowance and $821,500 under the budget estimate. Included in this amount are funds to finance 73 new positions, discounted on an 8-month basis due to the late enactment of the bill. Details on the individual appropriation items under the Library commence at page 18 of the report.

For the Government Printing Office, a total of $39,950,000 is recommended. Of this, $30,300,000 is to finance the cost of printing and binding for the Congress, based on an estimation of the fiscal year's requirements.

The committee recommends an appropriation of $9,650,000 for the Office of Superintendent of Documents, which is $402,000 below the budget request, but $1,472,000 over the 1969 appropriation—thus permitting a much-needed and fully justified expansion of the work forces. Specifically, the committee has provided funds to finance 112 full-time positions and the part-time equivalent of another 101 full-time positions. The sum recommended is $100,000 below the House bill and represents 8-month funding of new positions rather than 9-month funding which was provided for in the House bill.

With respect to the revised request for $3.6 million for selection of site and general plans and designs of the proposed new Government Printing Office building, the committee recommends disallowance of the funds at this time. The cost of the building was originally estimated at $47 million some 5 years ago when the project was first authorized. More recently, the General Services Administration submitted revised estimates, projecting escalation of costs, as follows: $62.5 million as of October 1969; $68.2 million as of October 1970; and $73.9 million as of October 1971. The committee recognizes the deficiencies of the present location and concedes the economies in operation to be attained in a new, modern, well-located printing plant. But the committee feels that the uncertainties surrounding the availability and desirability of the proposed new location and the escalation in construction costs from $47 million to almost $75 million warrant a more current evaluation and authorization. Therefore, the committee recommends disallowance of the funds in this bill. The committee has provided authority, however, for urgently required improvements in the electrical and air-conditioning systems in the present printing plant through the use of the revolving fund.

To fund the activities of the General Accounting Office, the committee recommends the sum of $63 million, an increase of $3,386,000 over the fiscal year 1969 appropriation. These increased funds will provide the additional 161 average positions justified to the committee as being essential to maintain currency in the increasing workload, along with associated travel and other mandatory costs.

That concludes my summary presentation, Mr. President. I now ask unanimous consent that the committee amendments be agreed to en bloc, and that the bill as thus amended be regarded for the purpose of amendment as original text, provided that no point of order shall be considered to have been waived by reason of agreement to this order.

The PRESIDING OFFICER (Mr. MONDALE in the chair). Without objection, it is so ordered; and the amendments are agreed to en bloc.

The amendments agreed to en bloc are as follows:

At the top of page 2, insert: "SENATE"

On page 2, after line 1, insert:

"COMPENSATION OF THE VICE PRESIDENT AND SENATORS, MILEAGE OF THE PRESIDENT OF THE SENATE AND SENATORS, AND EXPENSE ALLOWANCES OF THE VICE PRESIDENT AND LEADERS OF THE SENATE"

On page 2, after line 6, insert:

"COMPENSATION OF THE VICE PRESIDENT AND SENATORS

"For compensation of the Vice President and Senators of the United States, $4,685,530."

On page 2, after line 10, insert:

"MILEAGE OF PRESIDENT OF THE SENATE AND OF SENATORS

"For mileage of the President of the Senate and of Senators, $58,370."

On page 2, after line 14, insert:

"EXPENSE ALLOWANCES OF THE VICE PRESIDENT, AND MAJORITY AND MINORITY LEADERS

"For expense allowance of the Vice President, $10,000; Majority Leader of the Senate, $3,000; and Minority Leader of the Senate, $3,000; in all, $16,000."

On page 2, after line 19, insert:

"SALARIES, OFFICERS, AND EMPLOYEES

"For compensation of officers, employees, clerks to Senators, and others as authorized by law, including agency contributions and longevity compensation as authorized, which shall be paid from this appropriation without regard to the below limitations, as follows:"

At the top of page 3, insert:

"OFFICE OF THE VICE PRESIDENT

"For clerical assistance to the Vice President, $281,187."

On page 3, after line 2, insert:

"OFFICES OF THE MAJORITY AND MINORITY LEADERS

"For offices of the majority leader and the minority leader, $106,930: *Provided*, That effective November 1, 1969, the respective leaders may each appoint and fix the compensation of an administrative assistant at not to exceed $31,317 per annum, a legislative assistant at not to exceed $28,908 per annum, an executive secretary at not to exceed $15,111 per annum, and a clerical assistant at not to exceed $12,921 per annum in lieu of the positions heretofore authorized by Senate Resolution 158, agreed to December 9, 1941, Public Law 86-30, approved May 20, 1959, and Senate Resolution 240, agreed to January 24, 1952."

On page 3, after line 14, insert:

"OFFICES OF THE MAJORITY AND MINORITY WHIPS

"For offices of the majority and minority whips, $68,730: *Provided*, That effective November 1, 1969, the whips may each appoint and fix the compensation of an administrative assistant at not to exceed $30,003 per annum, and an executive secretary at not to exceed $15,111 per annum."

On page 3, after line 20, insert:

"OFFICE OF THE CHAPLAIN

"For office of the Chaplain, $17,185: *Provided*, That effective November 1, 1969, the compensation of the Chaplain shall be $10,074 per annum and he shall be subject to election at the beginning of each Congress: *Provided further*, That the Chaplain may appoint and fix the compensation of a secretary at not to exceed $8,541 per annum."

On page 4, after line 2, insert:

"OFFICE OF THE SECRETARY

"For Office of the Secretary, $1,675,448, including $144,673 required for the purpose specified and authorized by section 74b of Title 2, United States Code: *Provided*, That effective November 1, 1969, the Secretary may fix the compensation of the Assistant Secretary at not to exceed $11,826 per annum, employ and fix the compensation of a Special Assistant at not to exceed $10,293 per annum in lieu of an Assistant at $8,760 per annum, employ and fix the compensation of an Editor, Digest at not to exceed $21,024 per annum, an Assistant Editor, Digest at not to exceed $18,396 per annum, and a Clerk, Digest at not to exceed $8,541 per annum: *Provided further*, That, effective November 1, 1969, the Secretary is authorized to appoint a Comptroller of the Senate at a salary of $35,250 per annum, and a Secretary to the Comptroller at a salary of not to exceed $12,921 per annum, and the allowance for clerical assistance and readjustment of salaries in the disbursing office is hereby made available for personnel at such titles and per annum rates as may be necessary, at no time exceeding an aggregate of $249,660."

On page 4, after line 23, insert:

"COMMITTEE EMPLOYEES

"For professional and clerical assistance to standing committees and the Select Committee on Small Business, $4,017,014."

On page 5, after line 2, insert:

"CONFERENCE COMMITTEES

"For clerical assistance to the Conference of the Majority, at rates of compensation to be fixed by the chairman of said committee, $115,619."

On page 5, after line 6, insert:

"For clerical assistance to the Conference of the Minority, at rates of compensation to be fixed by the chairman of said committee, $115,619."

On page 5, after line 9, insert:

"ADMINISTRATIVE AND CLERICAL ASSISTANTS TO SENATORS

"For administrative and clerical assistants to Senators, $24,656,608: *Provided*, That the clerk hire allowance of each Senator from the State of Connecticut shall be increased to that allowed Senators from States having a population of three million, the population of said State having exceeded three million inhabitants: *Provided further*, That, effective November 1, 1969, paragraph (1) of section 105(d) of the Legislative Branch Appropriation Act, 1968, as amended (2 U.S.C. 61-1 (d)), is amended by increasing each of the amounts in the table therein relating to Senators' clerk hire allowances by $23,652, and paragraph (2)(i) of such section is amended to read as follows: '(i) the salary of two em-

ployees may be fixed at gross rates of not more than $23,652 per annum,'."

At the top of page 6, insert:

"OFFICE OF SERGEANT AT ARMS AND DOORKEEPER

"For Office of Sergeant at Arms and Doorkeeper, $4,915,909: *Provided,* That effective November 1, 1969, the Sergeant at Arms is authorized to employ the following additional employees: A Systems Programer at $15,987 per annum, a Production Manager at $14,454 per annum, an Applications Programer at $13,797 per annum, an Operator at $10,074 per annum, an Operator at $9,417 per annum, and six plainclothesmen, Police Force, at $8,760 per annum each in lieu of six Privates at $8,322 per annum each."

On page 6, after line 11, insert:

"OFFICES OF THE SECRETARIES FOR THE MAJORITY AND MINORITY

"For the offices of the Secretary for the Majority and the Secretary for the Minority, $196,612."

On page 6, after line 15, insert:

"OFFICE OF THE LEGISLATIVE COUNSEL OF THE SENATE

"For salaries and expenses of the Office of the Legislative Counsel of the Senate, $374,100."

On page 6, after line 18, insert:

"PAYMENT TO WIDOW OF DECEASED SENATOR

"For payment to Louella Dirksen, widow of Everett McKinley Dirksen, late a Senator from the State of Illinois, $49,500."

At the top of page 7, insert:

"CONTINGENT EXPENSES OF THE SENATE

"SENATE POLICY COMMITTEES

"For salaries and expenses of the Majority Policy Committee and the Minority Policy Committee, $236,720 for each such Committee; in all, $473,440."

On page 7, after line 5, insert:

"AUTOMOBILES AND MAINTENANCE

"For purchase, exchange, driving, maintenance, and operation of four automobiles, one for the Vice President, one for the President Pro Tempore, one for the Majority Leader, and one for the Minority Leader, $50,880."

On page 7, after line 10, insert:

"FURNITURE

"For service and materials in cleaning and repairing furniture, and for the purchase of furniture, $31,190: Provided, That the furniture purchased is not available from other agencies of the Government."

On page 7, after line 15, insert:

"INQUIRIES AND INVESTIGATIONS

"For expenses of inquiries and investigations ordered by the Senate, or conducted pursuant to section 134(a) of Public Law 601, Seventy-ninth Congress, including $431,775 for the Committee on Appropriations, to be available also for the purposes mentioned in Senate Resolution Numbered 193, agreed to October 14, 1943, $6,646,755, of which amount $6,000 is hereby made available for obligations incurred in fiscal year 1968."

At the top of page 8, insert:

"FOLDING DOCUMENTS

"For the employment of personnel for folding speeches and pamphlets at a gross rate of not exceeding $2.82 per hour per person, $46,355."

On page 8, after line 4, insert:

"MAIL TRANSPORTATION

"For maintaining, exchanging, and equipping motor vehicles for carrying the mails and for official use of the offices of the Secretary and Sergeant at Arms, $16,560."

On page 8, after line 8, insert:

"MISCELLANEOUS ITEMS

"For Miscellaneous Items, exclusive of labor, $5,708,986 including $497,000 for payment to the Architect of the Capitol in accordance with Section 4 of Public Law 87–82, approved July 6, 1961, and $15,000 for expenses of the Commission on Art and Antiquities of the Senate."

On page 8, after line 14, insert:

"For an additional amount for 'Miscellaneous Items, fiscal year 1969', $300,000, to be derived by transfer from the appropriation 'Salaries, officers and employees, Senate, fiscal year 1969'."

On page 8, after line 18, insert:

"POSTAGE STAMPS

"For postage stamps for the Offices of the Secretaries for the Majority and Minority, $240; and for air mail and special delivery stamps for the Office of the Secretary, $350; Office of the Sergeant at Arms, $215; Senators and the President of the Senate, as authorized by law, $119,328: Provided, That the maximum allowance per capita of $960 is increased to $1,056 for the fiscal year 1970 and thereafter: Provided further, That Senators from States partially or wholly west of the Mississippi River shall be allowed an additional $264 each fiscal year; in all, $120,133."

On page 9, after line 3, insert:

"STATIONERY (REVOLVING FUND)

"For stationery for Senators and the President of the Senate, $363,600; and for stationery for Committees and officers of the Senate, $14,250; in all, $377,850: Provided, That effective with the fiscal year 1970 and thereafter the allowance for stationery for each Senator and the President of the Senate shall be at the rate of $3,600 per annum: Provided further, That section 106 of the Legislative Branch Appropriation Act, 1969, (Public Law 90–417, approved July 23, 1968) is hereby made applicable to the President of the Senate."

On page 9, after line 14, insert:

"COMMUNICATIONS

"For an amount for communications which may be expended interchangeably, in accordance with such limitations and restrictions as may be prescribed by the Committee on Rules and Administration, for payment of charges on official telegrams and long-distance telephone calls made by or on behalf of Senators or the President of the Senate, in addition, to those otherwise authorized, $15,150."

On page 9, after line 22, insert:

"ADMINISTRATIVE PROVISIONS

"Effective October 1, 1969, the third paragraph under the heading 'Administrative Provisions' in the appropriations for the Senate in the Legislative Branch Appropriation Act, 1957, as amended (2 U.S.C. 53), is amended by striking out '$300' and inserting in lieu thereof '$400', and by inserting before the colon preceding the proviso therein a comma and the following: 'or incurred for subscriptions to newspapers, magazines, periodicals, or clipping or similar services'."

On page 10, after line 7, insert:

"Effective July 1, 1969, the third paragraph under the heading 'Administrative Provisions' in the appropriations for the Senate in the Legislative Branch Appropriation Act, 1959, as amended (2 U.S.C. 43b), is amended by striking out the portion thereof relating to payments from the Contingent Fund of the Senate and inserting in lieu thereof the following:

" 'The Contingent Fund of the Senate is hereafter made available for reimbursement of transportation expenses incurred by Senators in traveling, on official business, by the nearest usual route, between Washington, District of Columbia, and any point in their home States, for not to exceed twelve round trips (or the equivalent thereof in one-way trips) in each fiscal year'."

On page 10, after line 21, insert:

"Section 6(c) of the District of Columbia Traffic Act, 1925 (D.C. Code, sec. 40–603(c)), is amended by inserting after 'Senate and House of Representatives' the words 'Comptroller of the Senate,'."

On page 11, after line 2, insert:

"Effective July 1, 1969, the first sentence in the second paragraph under the hearing 'Administrative Provisions' in the appropriations for the Senate in the Legislative Branch Appropriation Act, 1962, as amended (2 U.S.C. 127), is amended to read as follows: 'The contingent fund of the Senate shall be available for the payment of mileage, to be computed at 10 cents per mile by the nearest usual route, between Washington, District of Columbia, and a point in the home State of the Senator involved, for not to exceed eight round trips made by employees in each Senator's office in any fiscal year, such payment to be made only upon vouchers approved by the Senator containing a certification by such Senator that such travel was performed in line of official duty, but the mileage allowed for any such trip (1) shall not exceed the round trip mileage by the nearest usual route between Washington, District of Columbia, and the residence city of the Senator involved, or between Washington, District of Columbia, and any other place in such State at which the Senator maintains an office pursuant to the provisions of the second paragraph under the heading 'Administrative Provisions" in the appropriations for the Senate in the Legislative Branch Appropriation Act, 1957, as amended (2 U.S.C. 52), whichever is greater, and (2) shall not include travel by an employee to his initial place of employment.' "

On page 12, after line 3, insert:

"No part of any appropriation disbursed by the Secretary of the Senate shall be available for payment of compensation to any person for any period for which such person is carried in a leave without pay status from a position in or under any department or agency of the Government."

On page 21, line 14, after the word "Committee", strike out "$441,165" and insert "$477,165".

One page 28, line 10, after "$2,000,000", insert a comma and "of which $250,000 shall be transferred to the appropriation for "Preservation of Historic Properties", National Park Service, Department of the Interior for the conduct of studies to determine the feasibility and cost of restoring the West Central Front of the Capitol without regard to any other Act".

On page 28, line 24, after the word "amended", strike out "$842,100" and insert "$874,100".

On page 28, after line 24, insert:

"SENATE OFFICE BUILDINGS

"For maintenance, miscellaneous items and supplies, including furniture, furnishings, and equipment, and for labor and material incident thereto, and repairs thereof; for purchase of waterproof wearing apparel, and for personal and other services; including eight attendants at $1,800 each; for the care and operation of the Senate Office Buildings; including the subway and subway transportation systems connecting the Senate Office Buildings with the Capitol; uniforms or allowances therefor as authorized by law (5 U.S.C. 5901–5902), to be expended under the control and supervision of the Architect of the Capitol; in all, $3,310,000, of which not to exceed $35,000 shall be available for expenditure without regard to section 3709 of the Revised Statutes as amended."

On page 29, after line 12, insert:

"EXTENSION OF ADDITIONAL SENATE OFFICE BUILDING SITE

"To enable the Architect of the Capitol, under the direction of the Senate Office Building Commission, to acquire on behalf of the United States, in addition to the real property heretofore acquired as a site for an additional office building for the United

States Senate under the provisions of the Second Deficiency Appropriations Act, 1948, approved June 25, 1948 (62 Stat. 1028) and Public Law 85–591, approved August 6, 1958 (72 Stat. 495–496), by purchase, condemnation, transfer, or otherwise, for purposes of extension of such site, all publicly or privately owned property contained in lots 863, 864, 892, 893, 894, and 905 in Square 725 in the District of Columbia, and all alleys or parts of alleys and streets contained within the curblines surrounding said square, as such square appears on the records in the office of the surveyor of the District of Columbia as of the date of the approval of this Act: *Provided*, That any proceeding for condemnation brought under this Act shall be conducted in accordance with the Act of December 23, 1963 (16 D.C. Code, secs. 1351–1368): *Provided further*, That, notwithstanding any other provision of law, any real property owned by the United States and any alleys or parts of alleys and streets contained within the curblines surrounding Square 725 shall, upon request of the Architect of the Capitol, made with the approval of the Senate Office Building Commission, be transferred to the jurisdiction and control of the Architect of the Capitol, and any alleys or parts of alleys or streets contained within the curblines of said square shall be closed and vacated by the Commissioner of the District of Coumbia, appointed pursuant to Part III of Reorganization Plan Numbered 3 of 1967, in accordance with any request therefor made by the Architect of the Capitol with the approval of such Commission: *Provided further*, That, upon acquisition of any real property pursuant to this Act, the Architect of the Capitol, when directed by the Senate Office Building Commission to so act, is authorized to provide for the demolition and/or removal of any buildings or other structures on, or constituting a part of, such property and, pending demolition, to use the property for Government purposes or to lease any or all of such property for such periods and under such terms and conditions as he may deem most advantageous to the United States and to incur any necessary expenses in connection therewith: *Provided further*, That the jurisdiction of the Capitol Police shall extend over any real property acquired under this Act and such property shall become a part of the United States Capitol Grounds; and the Architect of the Capitol, under the direction of the Senate Office Building Commission, is authorized to enter into contracts and to make such expenditures, including expenditures for personal and other services, as may be necessary to carry out the purposes of this appropriation; $1,250,000, to remain available until expended."

On page 31, after line 14, insert:

"SENATE GARAGE

"For maintenance, repairs, alterations, personal and other services, and all other necessary expenses, $76,600."

On page 35, at the beginning of line 15, strike out "$19,085,000" and insert "$19,061,500".

On page 35, line 24, after the word "copyrights", strike out "$3,128,000" and insert "$3,124,000".

On page 37, line 18, after the word "amended", strike out "$7,000,000" and insert "$6,997,000".

On page 41, line 12, after the word "libraries", strike out "$9,750,000" and insert "$9,650,000".

Mr. MONTOYA. Mr. President, I ask unanimous consent to have printed in the RECORD a structural history of the Capitol prepared by the Legislative Reference Service of the Library of Congress, which I think will put the whole matter in better perspective.

There being no objection, the history was ordered to be printed in the RECORD, as follows:

[From the Library of Congress, Government and General Research Division, Oct. 8, 1969]

STRUCTURAL AND/OR ARCHITECTURAL CHANGES MADE IN THE UNITED STATES CAPITOL, 1793 TO DATE

(Research by Helen Dalrymple)

The first cornerstone of the United States Capitol was laid by George Washington on September 18, 1793, but the building as we know it was not completed until 1890, when the Olmsted terraces were finished. During the 20th century, the roof over the original building was replaced, the House and Senate chambers were remodeled and provided with new roofs, and the east front of the Capitol was extended some 32 feet. Discussions of a proposed extension of the west central front of the Capitol began in 1964 and continue to the present time.

Construction of the Capitol, and proposed modifications of it, have engendered a good deal of discussion through the years, as might be expected with a building to which so much sentiment and tradition are attached. This memorandum will set out, in chronological order, the principal phases of construction of, or modifications to, the Capitol, along with a short description of any controversies that accompanied the proposed changes.

1792: George Washington and Thomas Jefferson decided to hold a competition for designs for the Capitol and the "President's House." James Hoban's design was accepted for the White House, but it was not until the following year that Dr. William Thornton's plans for the Capitol met with general approval.

1793: First cornerstone was laid September 18.

1793–1829: During this period the "old Capitol", consisting of the center section (but not the large dome which surmounts it today), and the north and south wings, or the old Supreme Court chamber and Statuary Hall, was constructed according to Dr. Thornton's basic design. James Hoban, Stephen Hallet, and George Hadfield, successively, were hired to supervise the execution of Thornton's plans for the Capitol, but disagreements with Thornton, who was made a Commissioner of the District of Columbia in 1794 and continued to exercise ultimate authority over the design of the building, led to the dismissal of Hallet and then Hadfield, after Hoban had been put in charge of construction of the White House.

In 1803 Benjamin Latrobe was given the job of superintending the construction of the Capitol. Like his predecessors, he too immediately wanted to modify Thornton's design but Thornton, with Jefferson's support, overruled him. Latrobe and Thornton continued to exchange charges and countercharges, even after 1805 when Thornton had ceased to defend officially the integrity of his design. During the 15 years that Latrobe was associated with the Capitol, however, he had a considerable effect on its ultimate design. He tore out some of the work of his predecessors, partially necessitated by the burning of the Capitol in 1814 by the British, changed wood floor and partition construction to masonry, and designed the wing west of the rotunda and the present East portico and steps. These steps changed the main entrance from the West, where Thornton had planned it, to the East. In addition Latrobe was responsible for the design of all the interiors of the central portion, and he completely changed Thornton's plan for the House and Senate chambers. Conflict between Latrobe and the new commissioner, appointed in 1816 to superintend the construction of the Capitol, led to Latrobe's resignation in 1817.

Charles Bulfinch, a prominent Boston architect, was appointed Architect of the Capitol in 1818 to fill the vacancy left by Latrobe's resignation. Realizing the difficulties of explaining architectural plans to members of Congress, one of the first tasks Bulfinch undertook was to have a wooden model of the Capitol prepared. It showed various alternative schemes designed by Thornton and Latrobe along with his suggestions for the central rotunda and dome, which had not yet been constructed. This apparently was a wise bit of strategy because appropriations allowing him to begin work on the central portion of the building were quickly approved. Although we could find no real controversy over the early construction of the building among members of Congress, there was a continuing concern over the cost of the building and the long period of time required for its completion. In addition, during these early years, some members felt that the Capital City would be removed from Washington at some point, and they were reluctant to see so much money being spent on the Capitol building in Washington.

Bulfinch completed the north and south wings, whose restoration after the 1814 fire had been begun by Latrobe, and designed and constructed the central portion of the Capitol with a wooden dome covered with copper. He stayed on as Architect of the Capitol until June of 1829, when he was officially notified that his office would be terminated that month (in accordance with a law passed by Congress the previous year abolishing the position of Architect of the Capitol).

Continuing acoustical problems with the restored House chamber were a matter of some concern to members of the House, as described by the following excerpt from I. T. Frary's "They Built the Capitol" (1940):

"The restored Hall of Representatives . . . was found to have perpetuated in it the echoes that had caused so much difficulty and criticism in the past. Committees were appointed to investigate the difficulty. Bulfinch was called upon for his opinion, as were William Strickland and Robert Mills, both of whom had formerly been assistants and associates of Latrobe.

"A variety of theories and suggestions were propounded and expounded, no two of which were in agreement, and none of which seemed to have much effect in remedying the poor acoustics. A canvas ceiling was stretched above the columns. This stopped the echoes, but also stopped the voice of the speaker, a consummation that would certainly not prove appealing to a legislative body all primed with pent up oratory. A wooden partition was built between the columns, but this came down ignominiously after a week's trial.

"Sunken panels were prescribed in place of the flat, painted ceiling. One expert wanted the floor raised; another contended that the ceiling should be lowered; a third proposed a rearrangement of the furnishings; and after all suggestions had been discussed or tried out, over a period of fifteen years or more, they apparently gave it up as a bad job. Today the room is used as a repository for statues of the great and near great, and the guides entertain visitors by demonstrating the freak echoes which enable them to hear whispers from certain remote positions on the floor."

Members continued to complain about the poor acoustics until 1857 when they moved into their new chamber in the just completed south wing. It is interesting to note that in 1902, when the roof of the old building was reconstructed, consideration was given to retention of the same old acoustical effects in Statuary Hall which had fascinated visitors for so many years.

Frary reports that the cost of the old building, including restoration after destruction by the British, was $2,432,851.

1851–65: By 1850 it had been determined that an enlargement of the Capitol was necessary to accommodate the two legislative bodies. Robert Mills, Architect and Engineer for the Government (but not officially designated Architect of the Capitol) submitted plans to the Congress for the extension of the Capitol by the addition of two wings, to the north and south of the original building. The Senate, however, insisted that a competition be held for the design of the extension, with the additional proviso that the plans would become the property of the government so that the best features of each could be combined. Although the Senate instructed Mills to draw up final plans upon the completion of the competition, President Fillmore decided to appoint Thomas U. Walter as architect of the extension of the Capitol. Under Walter's guidance, the north and south wings and the greatly enlarged Capitol dome were constructed between 1851 and 1865.

The first appropriation, $100,000, was approved by the Congress in 1850, and the cornerstone was laid on July 4, 1851 in the south wing. Construction began immediately, but was interrupted during the winter months of 1851–52 because the Congress couldn't agree on further appropriations. Allegations of fraud and poor construction methods were made (initiated apparently by the Commissioner of Public Buildings and Grounds because the construction of the extension had been placed under the Department of the Interior, and by unsuccessful bidders on construction contracts) and committees were appointed in both the Senate and House to look into the matter. The committees reported that the foundations were sound, that they would support the weight of the buildings, and in April, 1852, a further appropriation of $500,000 was approved.

In 1853, concern was expressed by some members of Congress that the Architect (Walter) had too much authority under the law, since he could draw funds from the Treasury on his own signature. President Franklin Pierce, newly elected, decided to give the War Department overall supervisory jurisdiction over the construction, and he appointed an Army Engineer, a Captain Meigs, to take charge of the work. Meigs and Walter got along fairly well, each respecting the other's ability, until 1857 when Meigs apparently tried to assert his authority over Walter. In 1859 Walter went directly to President Buchanan about Meigs, and Meigs was discharged.

It appears that the extension of the Capitol was a matter on which all members of Congress were agreed. Their old chambers were so unsatisfactory from the point of comfort, ventilation, and acoustics, that they felt that improved accommodations were mandatory. There was generally a discussion, however, each time additional appropriations were requested for the extension, because they were so far in excess of original estimates. Originally it was thought that the extension would cost between $1.5 and $2 million; in fact, the two wings came to a total cost of $8,075,299, and this figure did not even include the cost of the new dome ($1,047,291). After construction was well underway, though, it was acknowledged that the wisest course was to go ahead and complete the building. But this did not prevent certain members from taking the floor to complain about the excessive expense involved. In addition, the members seemed to occupy themselves with many of the details of the construction, ranging from the types of bricks to be used, the artistic decorations for the new wings, and of course, the seating arrangements for the new chambers. We quote below, from *Documentary History of the Construction and Development of the United States Capitol Building and Grounds*, to illustrate how some members of Congress felt about the Capitol extension.

[Senator Borland of Texas, April, 1852]: I am opposed to the extension of this Capitol, because I believe it is unnecessary. I do believe (and there are others who agree with me) that the room within the external walls of the present building is all-sufficient, if properly appropriated, for all our purposes, and will be for fifty years to come. . . .

But even if the extension were necessary, I am opposed to it on the plan proposed. It may be deemed presumption in one of my poor judgment, yet I do say, that, in my opinion, the proposed extension of the Capitol, with such wings as are spread out before us, and the proportion they sustain towards the rest of the building, will make a structure which I can call by no other name than *architectural monstrosity*, the like of which has never been seen in any civilized country on the face of the earth. . . . It will resemble, more nearly than anything which suggests a comparison, a mammoth brick-kiln, or some Mexican hacienda, which, as everyone knows, is the very burlesque of all architectural proportion. . . .

Consider also the inconvenience that will result from the proposed arrangement. The two Chambers of Congress will be about six hundred feet apart; and in conducting the intercourse of the two Houses, the distance to be traveled backwards and forwards will be something like a quarter of a mile!

Then, again, when these two wings are erected, and the two Chambers are established, one in each, what is to be done with the present building? It will be a series of great *lumber rooms*, making up an immense covered way from one Chamber to the other! Nothing more.

[Senator Houston of Texas, May, 1858]: . . . I have observed some of them [statues being prepared for placement in Capitol]; and the goddess of Liberty, I believe, is one. I am an admirer of statuary, but I cannot say that I am a critic, or even an amateur, in that department of art. It does seem to me that it is a figure which makes rather a queer display in the Capitol. In the first place, I object to its attitude. It appears to me to be in anguish—drawn back in the most ungraceful and ungainly attitude for a lady. [Laughter.] It appears to be in torment; and had it been physical, I should have imagined that it really had a boil under the arm. [Laughter.]

Although the original plans for the extension of the Capitol did not make provision for replacing the Bulfinch dome, it soon became apparent that the increased size of the Capitol completely dwarfed the old dome. Thomas Walter accordingly drew up plans for a new and much larger dome, to be constructed of cast iron, and in 1855 an appropriation of $100,000 to replace the dome was made. The vote in the Committee of the Whole in the House was tied, but it was approved when the chairman voted for it. Two days later the appropriation was passed by the House with no opposition. Since the original appropriation was made before any real estimate of the ultimate cost was made, appropriations for the dome, too, met some opposition in the Congress because of the expense involved.

Construction of the Capitol extension was, of course, complicated by the commencement of the Civil War, but President Lincoln insisted that the work be carried on as a symbol of the permanency of the Union. The Statue of Freedom was bolted in place on the new dome in December, 1863, but there were still a number of interior details to be completed when Thomas Walter submitted his resignation (again because of a conflict with other governmental authorities with jurisdiction over the Capitol) in May, 1865. However, during his tenure in office, he had greatly modified the Capitol building and had given it a new dome which today is regarded as a symbol of the United States.

1874–92: Supervision for landscaping the grounds of the Capitol was placed in the hands of Frederick Law Olmsted, the most prominent landscape architect of his time. The broad plaza on the east was planned by Olmsted, as well as the marble terraces and the grand stairway on the west as we know them today. The work on the grounds, including grading, boundary walls, and other features of the plan, was done between 1875 and 1881, at which time Olmsted requested an appropriation for the marble stairway and terraces on the west; these had not been authorized in the original bill. Construction of the terraces, which included space beneath them for committee rooms, was begun in 1883 and completed in 1892. Since this work was purely architectural in nature, the work was carried out under the supervision of the Architect of the Capitol, and Olmsted resigned in 1885.

As with some of the earlier improvements to the Capitol, there did not appear to be any real opposition to the landscaping of the grounds, except for the inconveniences it caused and the amount of money it cost. (Frary put the total cost of the terraces and landscaping at $3,626,579.) There was considerable discussion in the Senate in 1886 on an amendment proposed by Senator Hale of Maine to the appropriations bill for sundry civil expenses providing that the committee rooms constructed beneath the new terraces should have windows to the outside. The amendment was finally ruled out of order. Hale argued that the rooms should have natural light, while others insisted that to put windows in the terrace wall would completely destroy the intended architectural effect of a solid foundation supporting the Capitol.

The completion of the Olmsted terraces gave the West Front of the Capitol the aspect that is so familiar today.

1902: A gas explosion and fire occurred in the old Supreme Court Chamber in 1898, bringing the condition of the roof over the old Capitol building to the attention of the Congress. In 1902, therefore, the roofs of the central portion of the Capitol, including that over the old Supreme Court and Statuary Hall, were fireproofed and reconstructed. The outline of the new roof conformed generally to the old, but the two small domes were made somewhat lower. According to the report of Elliott Woods, Architect of the Capitol, this change was made "so that in case the Walter plan for the extension of the east front is carried out, the eastern front of the Capitol will conform to the perspective view as made by Mr. Walter." In Statuary Hall, as mentioned above, care was taken that the new ceiling conform largely to the contours of the old in order that the odd acoustics, or echoes, of the room be preserved. The total cost was approximately $170,000.

1949–50: During this period the roofs of the House and Senate wings were reconstructed and the two chambers were remodeled. The roof over the House Chamber had been supported by temporary steel supports since 1940, when it had been determined the roof was unsafe. Reconstruction of the roofs was delayed, however, because of the war. Some objections were raised in the House to the proposed remodeling of the House Chamber because of the history associated with it, and to the plan for removing the State seals from the old ceiling. The comments of Representative Huber of Ohio are typical of those made by opponents of the proposed remodeling:

"Mr. Chairman, we are only the temporary custodians of this Chamber. It belongs to posterity and should be preserved. We have over here on the other side the old Senate Chamber. It is regarded as such a holy of holies that they have a fence around it and we are not even permitted to go in and walk around. Yet we would change the architecture of this Chamber overnight.

"My amendment [to the deficiency appropriation bill] will not interfere with the letting of this contract. They can go ahead and make the necessary repairs and do the remodeling of the House Chamber, but it will not be necessary to take out the skylights and change the basic architecture. It is very little consolation to think that the State seals overhead will be taken out and deposited in a certain place in your home State. We are spending a lot of money on other projects and I do not see any reason in the world why we cannot safeguard this historic Chamber and keep it so that generations to come may visit and see it in its historic state. There is no reason, in my opinion, why it should not be preserved."

Mr. Huber's amendment to retain the existing architecture and skylights of the House Chamber was defeated, and the proposed remodeling of both chambers, incorporating design features from sources of Federal architecture used by Thornton and Latrobe in other sections of the Capitol, was begun. During the construction period, the House met in the caucus room of the Longworth Building, and the Senate met in the old Supreme Court Chamber. Both bodies were able to move into their newly refurbished quarters in January, 1951. The cost of the roof reconstruction and the remodeling of the two chambers amounted to $5,102,000.

1958–62: Extension of the East Front of the Capitol had first been proposed by Thomas Walter, the architect responsible for building the north and south wings and the enlarged dome on the Capitol in the 1850's. In 1904 Congress had established a joint commission to study the extension proposal, and they proposed two different schemes, A and B, for such an extension. Scheme A recommended an extension of 12 feet 10 inches, while Scheme B recommended an extension of 32½ feet. David Lynn, an assistant to the Architect of the Capitol and later Architect of the Capitol himself, made certain modifications in Scheme B, which were accepted by the commission.

In 1955 Congress approved appropriations for the extension of the East Front, with a provision that it be "in substantial accordance with Scheme B of the architectural plan submitted by a joint commission of Congress and reported to Congress on March 3, 1905." Opposition to the extension began to develop in 1957, and hearings were held in early 1958 on a bill which would have eliminated the requirement that the extension be carried out in accord with Scheme B. The bill was reported to the Senate, but it failed to pass by a vote of 32 to 47.

Opponents of the East Front extension argued that it would destroy the authenticity and integrity of the Capitol, that it would sacrifice historic values to the ever-growing need of legislators for more space, and that its execution was to be carried out in accordance with a plan prepared some fifty years earlier when the needs of the Nation were vastly different.

Proponents of the plan argued that the extension was a completion of Walter's original plan for the Capitol, which was not carried out because of the Civil War, that the existing overhang of the skirt of the dome over the East Portico was a serious architectural defect, and that the original sandstone wall of the East Front was in a serious state of deterioration.

Despite the objections of many members of Congress, the American Institute of Architects, and others, when S. 2883 failed to pass the Senate, the way for construction was, for all intents and purposes, cleared. Construction began in 1958 and was completed in 1962. The cost of the extension, including repairs to the dome, furnishings for the new areas, and improved lighting throughout the building, was $24 million.

1969: This brings us to the present time, when discussions of a proposed extension of the West Front are underway. We will not go into this dispute, since it is really beyond the intended scope of this memorandum, except to say that, as in 1958, there are strong feelings both for and against the proposal. There is no question that the sandstone West Front is deteriorating; supports have been put in place to insure safety. Opponents argue that the one remaining original wall of the Capitol should be restored instead of covered up, while proponents feel that the extension of the West Front would be a better solution. The issue has yet to be resolved.

In addition to this memorandum, we are enclosing copies of pictures of the Capitol at different stages of construction, which we thought would be helpful in illustrating the many different phases in the development of the Capitol. We hope you will find this information helpful, and that you will feel free to call on us again in the future if we can be of some further assistance.

Mr. MONTOYA. Mr. President, I shall be pleased to answer any questions any Member may have.

Mr. ELLENDER. I noticed in the report, as well as in the bill, that $800,000 is being added for the WATS system. I understood from the chairman of the committee that any Senator who desires to install this system in his office will have to contribute at least 50 percent of the money now allowed to him for telephone service. Is that correct?

Mr. MONTOYA. That is correct.

Mr. ELLENDER. What does that $800,000 cover?

Mr. MONTOYA. That covers the estimated expense, assuming that all Senators would subscribe to the WATS line.

Mr. ELLENDER. Assuming that each Senator does surrender 50 percent of his telephone allowance, will that cover the entire cost of the WATS system?

Mr. MONTOYA. The total telephone allowance used last year amounted to $720,000. Assuming that one-half is surrendered, that would amount to $360,000. I do not want to deceive the Senator from Louisiana, or the Senate. We have no accurate figures except this possible projection which might indicate a more definite figure. Thus, that is about all I can say.

I should like to relate to the Senator my own personal experience. I have an FTS line in New Mexico which I pay for out of my own personal resources. I feel that I need it to service the needs of my constituents and to promote the efficiency of my office. That is why I have it. I am not shedding any tears over the expense. The point I want to make is that since I have been using the FTS line, for which I pay close to $300, my telephone expense has gone down in actual use to 40 percent of my allowance. I have the figures here from the Sergeant of Arms, which I obtained a few minutes ago. This line can be used only from New Mexico to Washington. Thus, on the basis of my own experience, if I were to have a WATS line from Washington to New Mexico, I would probably use less than 40 percent. Therefore, from my own experience, I feel that this saving will exceed $360,000 and amortize the expense of the FTS line or the WATS line quicker than we can anticipate from available figures now.

Mr. ELLENDER. Does the Senator use the line that he has just described for personal business at all?

Mr. MONTOYA. No, I do not.

Mr. ELLENDER. It is strictly for business then?

Mr. MONTOYA. Yes.

Mr. ELLENDER. I go back to my earlier question: If each Senator were to install a WATS line as provided in the bill, the reimbursement from the telephone allowance would amount to what percentage of the cost of the WATS system?

Mr. MONTOYA. I would say perhaps between 30 and 40 percent.

Mr. ELLENDER. In other words, it would cost the Government from 40 to 50 percent more than the current telephone expense.

Mr. MONTOYA. I would say that, in round figures. May I also point out to the Senator from Louisiana that if a Senator has a WATS line in his office——

Mr. ELLENDER. I have an FTS.

Mr. MONTOYA. This is similar, except an FTS is a Government line and the WATS line is a leased line. But if a Senator has a WATS line in his office and he has processed a matter for a constituent of his, and it is an urgent matter—or perhaps it is not urgent—if one of the staff members uses that telephone to call the constituent, he saves the time consumed in writing a letter. My experience in the field has been that I have saved much on clerk hire by virtue of the FTS line which I have.

Mr. ELLENDER. Because the Senator can answer a constituent immediately.

Mr. MONTOYA. That is right. I cannot estimate what that means in efficiency and clerk hire. About a month ago I had the financial clerk get a compilation of what I had returned in salary hire since I have been in Congress. I do not have the exact figures before me, but I had turned back approximately $300,000.

Mr. ELLENDER. Was that partly due to the fact that the Senator has a WATS line?

Mr. MONTOYA. No; I was turning that money back before the use of the FTS, but I recognize that the use of the WATS line, which creates better efficiency, obviates the necessity of more correspondence in the office.

Mr. ELLENDER. As the Senator knows, the FTS line can be used by a Senator only from 5 p.m. to 9 a.m. next morning.

Mr. MONTOYA. The one that we have now, yes.

Mr. ELLENDER. And on holidays and Sundays.

Mr. MONTOYA. Yes.

Mr. ELLENDER. And the cost of that is only $30. Why should the WATS cost more? Is it because it can be used continuously, at any time of the day?

Mr. MONTOYA. Yes, obviously.

Mr. ELLENDER. That is the reason for it?

Mr. MONTOYA. Yes.

Mr. ELLENDER. I notice on page 4 of the bill the committee has suggested a Comptroller of the Senate be provided, at a certain salary, and that an assistant be appointed, and that the entire amount for clerical assistance shall not be more than $249,660. Is that sum in addition to what it costs for the present financial clerk and staff?

Mr. MONTOYA. The committee contemplates that in addition to the financial clerk, we would have a Comptroller. We are providing for additional funds only for that purpose.

Mr. ELLENDER. That is not an addition? I thought it was an addition to the force he now has.

Mr. MONTOYA. Two new positions are created—Comptroller and secretary to the Comptroller.

Mr. ELLENDER. Then, this is not in addition to what the Senate pays to the financial clerk and all of his employees?

Mr. MONTOYA. This is an additional allowance for two employees.

Mr. ELLENDER. What about the $249,660, which would be for additional clerk hire? Would he not be permitted to also add clerk hire in addition to the two positions the Senator mentioned?

Mr. MONTOYA. No; he will not be allowed any funds in addition to that previously authorized for the financial clerk and disbursing office staff.

Mr. ELLENDER. Let me put the question this way: How much more will it cost to operate the financial clerk's office with this provision in the bill than it now costs us? I am not opposing it; I want to clarify it.

Mr. MONTOYA. It will not cost any more except for the salary provided for the two new positions, Comptroller and a secretary for the Comptroller.

Mr. ELLENDER. What does the financial clerk spend now? Does the Senator mean to say it is included in the $249,660?

Mr. MONTOYA. The present disbursing office allowance is $249,660, excluding the salary of the financial clerk.

Mr. ELLENDER. In other words, all the committee has added to the present amount to be spent by the financial clerk is the salary of the Comptroller, which is fixed at $35,259, and then a secretary to the Comptroller? Is that all the committee has added?

Mr. MONTOYA. That is correct.

Mr. ELLENDER. With respect to the stationary allowance, the Senator has added $600 a year. What is the need for that?

Mr. MONTOYA. Many Senators have been facing additional paper requirements to pay for the new machinery they have installed in their offices. This is the only fund they can utilize for the purchase of the paper. We have not had an adjustment in this recently.

Mr. ELLENDER. I thought we increased it considerably in the last couple of years.

Mr. MONTOYA. As I stated before in my statement, I met with the chairman of the Committee on Rules and Administration and the chairman of the Ethics Committee, and we discussed recommendations made by the staffs of the three committees. We also sent out a questionnaire, under the name of Senator Hayden, before the first of the year, before his term expired, to each Senator asking specific questions about specific allowances Senators had had theretofore.

When I became chairman of the Legislative Subcommittee of the Committee on Appropriations, I followed up with an inquiry letter to each of the Senators who had not responded to the Hayden letter. We received the responses which we tabulated. Of the responses we received on specific categories, such as travel allowance and additional stationery allowance, every Senator was in accord that they should be increased.

Mr. ELLENDER. The Senator means every Senator who answered it, because I did not.

Mr. MONTOYA. That is what I said; every Senator who answered. It was the unanimous recommendation of the staffs of the three committees and the subcommittee, and was agreed to by the chairman of the Ethics Committee and by the chairman of the Rules Committee, that we should increase the allowance $600.

Mr. ELLENDER. So it would be $3,600 for Senators.

Mr. MONTOYA. That is right; from $3,000 to $3,600.

Mr. ELLENDER. How much does each Member of the House of Representatives receive, does the Senator know?

Mr. MONTOYA. $3,000. I wish to state also to the Senator from Louisiana—I know he is aware of it, but I should like for the RECORD to show it—that if any Senator does not use all his allowance, the remainder reverts, not to the Senator, but to the Treasury.

Mr. ELLENDER. That was an amendment originally adopted last year.

Mr. MONTOYA. Yes.

Mr. ELLENDER. And it applies only to the Senate, and not to the House of Representatives, as I understand.

Mr. MONTOYA. That is correct.

Mr. ELLENDER. The reason I did not answer the questionnaire the Senator sent to me was that, as I recall, last year I returned half of what was allotted to me, or about $1,500, and I am just wondering what the stationery account is being used for.

Mr. President, I have other questions that will come up when I offer certain amendments; and if there is anything I say that is not in accord with the record, I request that the Senator interrupt me.

Mr. MONTOYA. I shall be more than happy to answer the Senator's questions.

Mr. ELLENDER. Because, as the Senator knows, this was put on my desk only yesterday—as a matter of fact, I believe it was printed last night—and I did not have the opportunity to go through all of the record of the hearings, and for that reason I am not as well acquainted with the contents of the bill, the hearings record, and the report as I should be.

Mr. PROXMIRE. Mr. President, before I call up my amendment, I wish to say I am impressed by the way in which the distinguished Senator from New Mexico, the chairman of the subcommittee, has handled this bill. This is one of the most difficult appropriation bills to handle, because it hits Senators where they live—and I mean literally where they live: It affects our allowances, and it affects the amount of space we have. It is a complicated bill, and one that affects Senators' sensibilities. The Senator from New Mexico has handled it with great tact and sensitivity, and, while I may disagree with him on a few points, I think he has done an excellent job.

AMENDMENT NO. 251

Mr. PROXMIRE. Mr. President, I call up my amendment No. 251, and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 28, strike out lines 8 through 15 and insert in lieu thereof:

"WEST FRONT OF THE CAPITOL

"For the conduct of studies to determine the feasibility and cost of restoring the west-central front of the capitol, without regard to any other act, $250,000, which shall be transferred to the appropriation for 'Preservation of Historic Properties', National Park Service, Department of the Interior."

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the distinguished Senator from Louisiana.

Mr. ELLENDER. As I understand, this amendment is the same amendment that I proposed to the committee when the bill was considered.

Mr. PROXMIRE. Yes, indeed; this is the amendment that the Senator from Louisiana proposed in the committee, where it lost by a tie vote.

Mr. ELLENDER. A tie vote, 6 to 6.

Mr. PROXMIRE. That is correct.

Mr. ELLENDER. I wish to join the Senator in sponsoring his amendment. I noticed this morning he was offering the amendment I offered in committee.

Mr. PROXMIRE. I thank the Senator from Louisiana, and I ask unanimous consent that his name be added as a cosponsor. Already the Senators from Massachusetts (Mr. BROOKE and Mr. KENNEDY) and the Senator from New Jersey (Mr. CASE) are shown as cosponsoring the amendment; and, in addition, I ask unanimous consent that the names of the Senator from South Carolina (Mr. HOLLINGS), the Senator from Maryland (Mr. TYDINGS), the Senator from Connecticut (Mr. RIBICOFF), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Wisconsin (Mr. NELSON), the Senator from Ohio (Mr. YOUNG), the Senator from Minnesota (Mr. MCCARTHY), the Senator from California (Mr. CRANSTON), the junior Senator from Minnesota (Mr. MONDALE), and the Senator from New Mexico (Mr. ANDERSON) be added as cosponsors of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, this amendment would strike $1,750,000 from the bill. These funds are currently earmarked for the preparation of detailed plans and specifications, and for associated expenses in connection with the extension of the west front of the Capitol.

The bill as it passed the House contained $2,000,000 for extension planning. However, I am happy to say that the Senate Appropriations Committee felt that a restoration study should be made and thus reduced funds for extension planning by $250,000, channeling this money into a restoration study.

But this action still leaves us in somewhat of a dilemma. We appear to be proceeding along two mutually exclusive courses. On the one hand we are giving the Architect of the Capitol the green light to proceed with detailed plans for extension of the west front. On the other hand we are commissioning a study which could well form the basis for a

congressional decision to restore the west front—thus preserving the last exterior portion of the original Capitol and also preserving a great deal of money as well. If we decide to restore on the basis of the study a great deal of the $1,750,000, if not all of it, will have been spent to no good purpose.

Mr. President, this morning's New York Times commented on this issue directly and, I thought, with great persuasiveness. I should like to read the short editorial from the New York Times dealing with this subject matter. The title of the editorial is "Affront to the Capitol," and it reads as follows:

The Senate, in an excess of diplomatic zeal, is doing its best to have it both ways on the West Front of the Capitol. According to the Appropriations bill due on the Senate floor, $1.75 million of the $2 million already appropriated by the House would be voted to start work on the extravagantly unnecessary expansion scheme favored by Mr. Stewart, the nonarchitect of the Capitol. At the same time $250,000 would be appropriated for a study by the National Park Service on the feasibility of restoring the West Front.

That is certainly a glorious contradiction in terms and a superb double-headed political ploy—$250,000 for preservation and $1.75 million for destruction—take your choice. The $1.75 million would just be the push to get the ball rolling on a grotesque $45-million rebuilding scheme that could rise to $70 million without even trying. It is a proposal to which the professional world of architects, historians and environmentalists and a large number of thinking and feeling citizens are violently opposed. It enjoys favor with few except the architect of the Capitol and his architects who will do the job.

The Senate could demonstrate a fine sense of economy and art by eliminating the $1.75 million and voting only the $250,000 to the Park Service for an immediate preservation study. This is one case where the issue is clear: Spare Mr. Stewart's feelings or spare the Capitol.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the distinguished Senator from Florida.

Mr. HOLLAND. I should like to say, in the first place, that I have received a communication from the architects of Florida, through their organization, the Florida Association of Architects, supporting the position taken by the Senator from Wisconsin and others, and stating that under no circumstances do they want to see destroyed this original west front of the Capitol, which has so much historic value, with which point I am sure the Senator from Wisconsin will be dealing in his speech.

In the second place, I wish to say that I took this same position in committee, and that I related there the fact that, as members of the Committee on Public Works at the time of the restoration of the White House, we were faced with much the same problem: Whether to destroy the outside appearance of the White House and reconstruct it, and perhaps destroy the whole White House as it had previously existed, or, instead, to preserve all the historic values there, outside and inside, most of them dating back to the restoration after the British fire, by reenforcement work within the walls and under the foundations of the White House.

We decided, after making a personal visit and after discussion of the matter with President Truman, who at the time was our President, that we should conserve those historic values by strengthening the interior of those walls, and strengthening the foundation.

That was done; and I may say that in spite of a little furor which was raised at the time, I have never heard since that time anything except compliments addressed to the fact that that course was followed, and that this historic value in connection with the retention of the appearance and the historically interesting things about the exterior of the White House, and many of the historic things within the White House, was well worth preserving, and that Congress preserved something of great historic interest and value to our country.

I believe that much the same thing applies in the instant case, perhaps to even a little greater degree, because now the west front is all that remains of the original sandstone structure of the Capitol, at least as I have been informed.

I think that, not only for its appearance, but for its historic interest, dating back as it does to the sandstone quarries of nearby Virginia and to the plans made by our Founding Fathers who participated at that time in planning the original Capitol, we should preserve those historic values, and I strongly support the position taken by the distinguished Senator from Wisconsin and his associates.

I think that I made this position perfectly clear in the committee. I should like to make it equally clear in the RECORD at this time. I think we shall be neglecting very important historic values if we move to extend the west front of the Capitol, and thus really exterminate all possible historic values still remaining in the ancient west front of the Capitol.

I hope that the amendment of the Senator will be agreed to.

Mr. PROXMIRE. Mr. President, I thank the Senator from Florida.

I think that the eloquent and persuasive argument the Senator has made with reference to the preservation of the last part of the original Capitol Building, the only part that has not already been altered, is even more important than the very large amount of money involved.

I think that the Senator's comparison of this matter with the action taken with respect to the White House is excellent and should serve as a guide.

Mr. PEARSON. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. PEARSON. Mr. President, I point out to the distinguished Senator from Florida that the testimony in the committee did deal with the very point he developed so well. The difference was that in the restoration and the maintenance of the west wall, it was not possible to evacuate the Capitol and do all the inner structure work that is necessary and that was possible in the day when President Truman moved to the Blair House.

As I recall the testimony from the office of the Architect of the Capitol with respect to the consideration of restoration, the fact that this building would remain a working building was one of the considerations.

Mr. PROXMIRE. Mr. President, this is exactly why I think we need a study of feasibility as well as the cost of restoring the west front.

The American Institute of Architects has told us—and I have a letter to that effect—that there would be no more inconvenience and no greater area eliminated from use with restoration than with extension. They may be right, or they may be wrong. However, until we get a study from the Park Service, it is hard to determine whether the American Institute of Architects or the Capitol Architect is correct.

Mr. HOLLAND. Mr. President, with respect to the comments made by my distinguished friend, the Senator from Kansas, I am sure that he has correctly reported what happened in the committee. However, I lived through the extension of the other front of the Capitol. And anyone who could say that we were not greatly disturbed in a large part of the Capitol while that extension was taking place did not survive that particular effort.

I cannot see how any more disturbance could be accomplished with reference to the restoration of the west front of the Capitol than was accomplished at that time in extending the east front of the Capitol.

I remind the distinguished Senator from Kansas that the part of the Capitol in which we hold our sessions and the part of the Capitol in which the House of Representatives holds their sessions will not be disturbed in any way. This effort applies to the middle portion of the Capitol. And if some tourists are disturbed by either one of these programs, I do not think it would matter greatly. The essential business of our Government could continue. As a matter of fact, much of the business of the Government takes place in the committee rooms and in the offices of Senators and Representatives and in other portions of the establishment such as the Library of Congress.

As far as I am concerned, I do not believe there will be any material difference in the inconvenience that would be experienced.

I do think that in this country which is growing so rapidly we are forgetting many of our historic facts. It is well worthwhile to preserve this last historic vestige of the original Capitol planned by so many of our Founding Fathers.

I have never forgotten a time before I came to the Senate when I heard one of the guides talking to a group of youngsters at the corner of the House wing of the Capitol.

He explained how the site for the Capitol was chosen. He pictured it very graphically. He explained how the father of our country, President Washington, rode here on his horse with various other persons whose names I do not now recall. One was a French engineer, and there were others, including, as I

recall, Mr. Jefferson who later was President.

There was some talk of a disturbance between Jefferson and Hamilton as to where the Capitol should be and where the District of Columbia should be.

The guide pictured this notable group of our great Founding Fathers and others riding up to the spot at the top of the hill, looking over the Potomac at the Virginia hills on the one side, looking at Virginia and at Maryland, and saying, "Here will be the Capital of the United States," and then pursuing that with the construction of the original Capitol, which was a tremendous venture for that young Government and for that young and poor Nation.

I think we should preserve this part of the Capitol. I think we need to preserve the historic values in this country. And I think one of the things we need above everything else at this time is to have our people, and particularly our young people, realize what has gone on before, during the founding of this great Nation and the Capitol which in many respects has become the Capital of the free world.

Here is the last vestige of that original Capitol which is proposed to be destroyed in this well-intentioned extension which we do not need. As a matter of fact, a great many of us have rooms in the other extension that are hardly used at all. I have told the committee that if anyone wants my extra room there, he is welcome to it.

We are not using all the rooms in the other extension of the Capitol. I do not think we should talk about this tremendous extension with three dining rooms and all the other things that are mentioned and at the same time forget the value of the historic west front and destroy it completely.

It is for that reason that I shall strongly support the effort now being made by my distinguished friend, the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, once again I thank the distinguished Senator from Florida for his very persuasive and eloquent appeal.

VISIT TO THE SENATE BY A MEMBER OF THE FRENCH SENATE

Mr. McGEE. Mr. President, I take this opportunity to introduce to the Senators a very distinguished visitor to our country, Senator Andre Monteil.

Senator Monteil is chairman of the Foreign Affairs and Armed Forces Committee of the French Senate. I could not help wondering if it would not be a solution to some of our problems if we were to combine the chairmanship of those two particular committees.

Senator Monteil is a former professor of literature, which likewise lends an aura of distinction to his role. He was first elected to the French Assembly in 1945. So, he has acquired a great deal of seniority. He has been State Secretary for the Navy twice, in 1950 and 1954. He was Minister of Public Health in 1954 in the government headed by Premier Mendes-France. He was first elected to the Senate in 1959 and was then reelected in 1962.

Senator Monteil was active in the French resistance movement. He holds the Medaille de la Resistance, the Croix de Guerre, and the Bronze Star Medal of the United States. He is a member of the Legion of Honour.

One of the Senator's five sons is married, I am happy to say, to an American.

I am sure I speak for all Members of the Senate in welcoming to the Senate our most distinguished French colleague. [Applause, Senators rising.]

Mr. President, I ask unanimous consent that the Senate stand in recess for 3 minutes so that Senators may have the privilege of meeting Senator Monteil.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS

Thereupon, at 2 o'clock and 59 minutes p.m., the Senate took a recess until 3:02 p.m.

During the recess, Senator Monteil was greeted by Members of the Senate.

On expiration of the recess, the Senate reassembled and was called to order by the Senator from Oklahoma (Mr. BELLMON).

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House insisted upon its amendment to the bill (S. 2276) to extend for 1 year the authorization for research relating to fuels and vehicles under the provisions of the Clean Air Act, disagreed to by the Senate; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. STAGGERS, Mr. JARMAN, Mr. ROGERS of Florida, Mr. SATTERFIELD, Mr. SPRINGER, Mr. NELSEN, and Mr. CARTER were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 12982) to provide additional revenue for the District of Columbia, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. MCMILLAN, Mr. ABERNETHY, Mr. DOWDY, Mr. CABELL, Mr. NELSEN, Mr. HARSHA, Mr. BROYHILL of Virginia, and Mr. HOGAN were appointed managers on the part of the House at the conference.

LEGISLATIVE BRANCH APPROPRIATIONS, 1970

The Senate resumed the consideration of the bill (H.R. 13763) making appropriations for the legislative branch for the fiscal year ending June 30, 1970, and for other purposes.

Mr. PROXMIRE. Mr. President, before I yield to the Senator from Kansas, I should like to read into the RECORD a response I received from the American Institute of Architects. This is a response that came from Francis D. Lethbridge, of the AIA, who was asked by the president of the AIA to look into this matter and to answer our questions. I will read the question, which is brief, and the answer. The question is a follows:

Question. Another point made by Mr. Campioli, the Assistant Architect of the Capitol, is that restoration would involve considerable inconvenience to visitors and occupants alike. He explained that the entire West Front, including Statuary Hall, would have to be vacated for 5 to 10 years. Furthermore, he stated that if the extension were approved the rooms and corridors along the West Front would remain in commission. Will you give your expert opinion of these assertions?

This is what the AIA replied:

Answer. Restoration, like Extension, will involve some inconvenience. Inconvenience to visitors, however, should be negligible in either case. Campioli's statement that the entire West Front, including Statuary Hall, would have to be vacated for 5 to 10 years, is ridiculous. There is no reason to believe that Statuary Hall would have to be vacated at all, and no reason to believe that all of the rooms on the West Front would have to be vacated for any such period of time. If the work were to proceed slowly it would not be necessary to vacate more than that portion of the offices affected and if it were to be carried out more quickly, the spaces would have to be vacated for only a fraction of the time claimed.

I might say, once again, that however one would decide on this matter, whether he would accept the word of the Architect of the Capitol or of the AIA, the answer is going to be forthcoming, I would hope, in the study that we are requesting instead of by expending this large amount of money.

I yield to the Senator from Kansas.

Mr. PEARSON. Mr. President, I do not want to make a great point out of this particular discussion, but I think it would be helpful just to show the conflict, if nothing more, between the people who advise the committee. I have reference to page 610 of the hearings. Mr. Campioli made some reference to the complexity of the restoration work. He said and testified to the committee:

It would not be a simple restoration. It would be a most complex restoration, probably the most complex which has ever been done or would be done in this country. It could only be done safely if we were permitted to do the work like the White House was done in relatively recent years. In other words, gut most of the entire interior of the old part of the Capitol by taking the floors and arches down so that they would no longer be exerting any lateral pressure against the outside wall and vacating the west central side of the Capitol for a long period.

I ask unanimous consent, Mr. President, so that I will not be quoting out of context that the paragraph entitled "Complexity of restoration work," found on pages 610 and 611 of the hearings, be printed at this point in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

COMPLEXITY OF RESTORATION WORK

Mr. CAMPIOLI. It would not be a simple restoration. It would be a most complex restoration, probably the most complex which has ever been done or would be done in the country. It could only be done safely if we were permitted to do the work like the White House was done in relatively recent years. In other words, gut most of the entire interior of the old part of the Capitol by taking the floors and arches down so that they would no longer be exerting any lateral pressure against the outside wall and vacating the west central side of the Capitol for a long period. If the procedure followed at the

White House were possible at the Capitol, then you could proceed to restore that wall.

You could then build in expansion joints, and you would reconstruct all the interiors under modern construction methods, using masonry-bearing walls, reinforced concrete floor slabs and the arches would be put back, by use of hung ceiling construction.

To do it any other way would be very risky. I have a drawing here that I think will explain our problem. This drawing is a typical section of an arch in the building. We have two types of arches. We have a barrel arch, whch is this type (see p. 663) and then we have groined arches (see p. 664), which cross each other and are much flatter in curvature. The exterior of the wall is built of sandstone, as you see here [pointing]. Some of these stones are quite large.

If any of the stones which have deteriorated, have to be removed, they would have to be removed by first removing some of the stones above and then putting them back into place after the deteriorated stone is replaced. The interior of the House side of this wall is of granite rubble stone, laid in lime mortar. The inner face of the Senate side wall is of brick, laid in lime mortar.

The core of the wall is a mass of loose material, stones dumped into place with some lime mortar and many, many voids. A hundred percent of the corings that were made of this wall in 1964 showed voids behind the sandstone.

Now the thickness of this west wall acts as a counteraction against the thrust of this arch. Any substantial removal of this sandstone would cause the interior core to fall out, and the remaining thin wall, this interior rubble, would not be sufficient to support the thrust of these arches. In addition to which these arches are superimposed with a sandfill which supports the finished floor material on the floor above.

These arches are set in lime. If this west wall were to be subjected to any substantial amount of restoration, such as the removal of any cracked stone, deteriorated stone or spalled stone, all of these arches on the west central front of the Capitol would have to be completely shored from the basement on up to the roof. By such shoring we would relieve these arches from the compression that they are now subjected to; in other words, they would become dormant arches carrying no loads, as the shoring and the centering would then carry the load.

In order to install the shoring, all of the plaster would have to be removed so that the centering could be placed against the bricks. The jarring that would follow in removing these stones might very well cause the lime mortar between the bricks, which are not set with full beds, to allow the sandfill to filter through the openings in the joints.

We had that experience in the channeling operation when we installed the new electric wiring in recent years. We cut about an inch square chase into the brick arches. The resultant pounding would cause the sand to come through. Mr. Stewart experienced some of that in his own office. These are some of the basic problems of restoration.

Senator PEARSON. What would you do on the extension? How would your procedure differ there?

Mr. CAMPIOLI. On the extension we would add a structure that would act as a buttress, as shown in this dark area here [pointing].

Senator PEARSON. You would build against it?

Mr. CAMPIOLI. We would build against it. That new work would act as a buttress to keep the west wall from moving farther downhill.

Senator PEARSON. Thank you.

Mr. PROXMIRE. Mr. President, I do not think the Senator from Kansas and I disagree. Neither of us is an architect, and we are not pretending to make a judgment on this. The point is that there is a difference of opinion. How is that difference of opinion to be resolved? We resolve it by having the Park Service, which everybody agrees is competent to make the study, go ahead and make the study—a study which I will show, in a few minutes, has not been made in anything like an adequate way.

I yield to the Senator from Ohio.

Mr. YOUNG of Ohio. Mr. President, what the distinguished Senator from Wisconsin says, that none of us here is an architect, is true. That is also true, as the Senator knows, of J. George Stewart, the Architect of the Capitol. He is not an architect, but was appointed Architect of the Capitol by President Eisenhower. He continues to hold that position at the pleasure of the President.

Throughout the Johnson administration, the senior Senator from Ohio hoped, and now has been hoping throughout the short period that President Nixon has been in office, that it would be the pleasure of our President to remove J. George Stewart and appoint in his place a man who is really a qualified architect, instead of one who is a former Republican Congressman from the State of Delaware and who has done a good job for the Republican National Committee.

I thank the distinguished Senator from Wisconsin for yielding to me. As my colleague knows, I am very happy to be a cosponsor of his amendment to strike out $1,750,000 included in this bill for the purpose of implementing J. George Stewart's scheme to deface the west front of the Capitol.

Most of us assumed that this boondoggle, which was first unveiled in 1966, had been abandoned by Mr. Stewart and his backers. Now, at a time when the President of the United States has ordered a major cutback in Federal construction, when Congress is trying to hold down appropriations, when the budgetary and inflationary situations are even more critical than they were in 1966, when there are innumerable domestic crises for which adequate funds are not available, the bumbling non-Architect of the Capitol urges that taxpayers' money be spent for this unconscionable boondoggle.

I am glad that the Senator from Wisconsin has taken hold of this proposal and is so violently expressing his opposition to it.

Mr. Stewart says that it will cost $45 million to do what he proposes to do; but if his earlier pet projects are any guide, this would eventually wind up costing taxpayers at least $90 million.

It may be that something must be done to the west wall to keep it from crumbling away. However, it is incredible, but it is true, that to date no study has been made to determine how much it cost to repair it rather than to expand and alter it.

I commend my colleagues on Committee on Appropriations for recommending that $250,000 be appropriated for a study of the feasibility and of the cost of restoring the west front of the Capitol, a study which the so-called Architect of the Capitol has never undertaken.

Qualified engineers and architects have reported that the walls of the west front can be braced and strengthened without damage to the historical building. The Fine Arts Commission has charged that Stewart's proposal would be a national tragedy, and stated that the old walls can be repaired in their present location. It would be virtual sacrilege to destroy the noble west front of the Capitol with its classic walls and its cascading staircases without the most compelling reasons for doing so. Americans can be thankful to date this proposed senseless vandalism on a national monument has been rejected.

The fact is that the walls of the west front are not nearly in such a state of deterioration as J. George Stewart would lead us to believe. Every study made by a task force independent of the so-called Architect of the Capitol differs greatly with his conclusion that the Capitol has been in a state of near collapse since the 1950's.

In 1957 an engineering study was conducted by experts of the National Bureau of Standards. They made core samples and examined the west wall in detail. They found that much of the exterior sandstone of the Capitol was weathered but to depths no greater than one-half inch. Their report stated:

> If this depth is removed by means of suitable tooling, the sandstone should be serviceable for many more years. . . .

In addition to the report of the National Bureau of Standards, a report prepared for the Architect in 1964 by the firm of Thompson & Lichtner, engineering consultants, stated:

> The structure, except for the exterior walls, has not been subjected to weathering and is not in a hazardous condition.

Furthermore, the American Institute of Architects, which represents over two-thirds of the licensed architects in the country—and I mean certified architects and not political architects such as J. George Stewart—has continually maintained that the walls are architecturally sound.

Mr. President, if the statement attributed to Benjamin Franklin, "Experience keeps a dear school, but fools learn in no other," has any meaning, then it would be sheer folly to follow this most recent of J. George Stewart's recommendations. I have carefully watched the manner in which the so-called Architect of the Capitol has managed his office throughout the years I have been in the Senate. I have witnessed an unbroken series of boondoggles, of stumbling and fumbling and an unbelievable waste of taxpayers' money. Now, J. George Stewart proposes to deface the Capitol of our country.

Before any further funds are appropriated for actual work on the west front, Representatives and Senators should have available full and accurate information regarding the alternatives. A member of my staff recently asked the executive assistant in the Architect's Office for information as to the costs involved in restoration of the west front. Amazing as it may seem, he replied:

> We have no breakdown of the estimates of the cost of restoration, neither the Congress nor the Commission having ordered or provided funds for that purpose. Furthermore,

our experts feel that such an estimate would be meaningless and would bear no resemblance to the final cost of restoration should that course be followed.

His latter statement is undoubtedly true if we consider how previous cost estimates of the Architect's Office usually represented half of the actual cost of completion. This is just another example of the disgraceful manner in which the Office of the Architect of the Capitol is conducted.

Over the years I have spoken out in the Senate on the shameful mismanagement of that Office. The Comptroller General has reported the lack of proper management procedures which makes it impossible for him to ascertain actual costs on various projects under the direction of the Architect.

Mr. President, if we accept the argument that more space is needed made by those favoring Stewart's proposal, why not extend the Capitol underground into the plaza on the east side. Knowledgeable architects report to me that this would be a relatively easy task. Also, that it would cost only one quarter of the proposed west front extension, requiring some 270,000 square feet of space at a cost of $40 per square foot, or $11 million, as opposed to $167 per square foot, or $45 million, for the proposed extension of the west front. There would be a savings of $34 million of taxpayers' money. Part of this could be used for restoring the west front.

Mr. President, I strongly urge the adoption of the pending amendment. I express earnest hope that we will not permit the Architect of the Capitol to proceed with his plans to deface the west front of the Capitol. The $1.75 million requested to prepare plans for the project would be not only an economic extravagance but senseless vandalism on a national monument.

I thank the Senator for yielding.

Mr. PROXMIRE. I thank the distinguished Senator from Ohio, who has been a very consistent and effective critic of the Architect of the Capitol, and he has fought long and hard against this proposal.

Mr. President, for make no mistake about it, once we have taken the first step down the extension path it will be harder to turn back. Regardless of what a restoration study shows, and I am convinced such a study will show that restoration is both feasible and far less expensive, next year the proponents of extension will point to the funds already spent on planning and talk of what a colossal waste it would be to change our course.

There are a number of reasons why we should not provide funding for planning an extension of the west front. But perhaps the most compelling is the fact that we have never had a study worthy of the name of the feasibility and cost of restoring rather than extending the west front. The Architect of the Capitol has been on record for a number of years in support of the extension of the west front. As far back as August of 1957 in a report to Speaker of the House Rayburn the Architect recommended "the adoption of scheme C, embracing all improvements proposed for both the east and west sides of the Capitol." On Wednesday, June 5, 1963—6 years ago—the Architect of the Capitol told the Legislative Subcommitee of the Senate Appropriations Committee:

I am on record with the Commission as advocating extension and reconstruction of the west front at an early date.

In view of this predisposition on the part of the Capitol Architect, should it really surprise us that the only "study" on the issue of whether to extend or restore recommended extension? This so-called study was commissioned by the Architect himself. Its total cost was $33,500, according to a release from the Capitol Architect's Office dated March 21, 1967. It concerned itself principally with the existing condition of the Capitol—studying the stones and joints and buttresses in great detail. It gives no convincing reasons why extension is preferable to restoration. It devotes one paragraph to each of these alternatives. Yet, this is the study that the Capitol Architect, the man who commissioned the study, mind you, uses as his basis for declaring restoration infeasible. To accept this study as the completely unbiased, objective last word on the subject makes about as much sense as to let the catcher, not the umpire, call the balls and strikes.

In contract to this $33,500 study which the Capitol Architect points to as the last word on the subject of restoration versus extension, it is noteworthy that as of that March 21, 1967 date, $240,000 had been spent on the preparation of preliminary plans and estimates of the west front extension. In this bill we propose to spend an equivalent amount on a restoration study. In this way we can know exactly what we are talking about when we discuss restoration. We will not have to accept the estimate of Mr. Campioli, the Assistant Architect, that restoration costs will be between $10 million and $50 million—an estimate that no logical mind could accept as the best obtainable. The Congress will be armed with the information essential to a reasoned decision.

Let us look at the cost factor. The American Institute of Architects in a letter to me dated October 1 states:

It is the considered opinion of those experts consulted by the A.I.A. that the cost of repair and restoration would probably not exceed $10 million and that it is inconceivable that it could exceed $20 million.

Now when the Architect of the Capitol first estimated the cost of extending the west front back in 1957 it compared favorably with this $20 million ceiling. The estimated cost in 1957 was $17 million. This went up to a modest, relatively, $20 million as late as June of 1963. The estimate had ballooned to $34 million by 1966 and we are now told that the cost will be $45 million. In other words, the cost went up by $3 million in the first 6 years following the extension proposal and by $25 million in the next 6 years. If we continued to see such cost escalation and it takes another 6 years to complete an extension, the total cost will be $70 million. The Capitol Architect's slide rule has never been so accurate as to inspire us with confidence that such a further increase will not take place.

How about cost per square foot? The Rayburn Building, hardly a fine example of cost conscious construction, cost $34.26 per square foot. The west front, assuming no cost escalation, will cost a whopping $166.95 per square foot. Even a top-flight hospital, fully equipped with all the latest equipment only costs about $100 a square foot or two-thirds as much as the west front extension. Does it make sense to begin a project almost five times as expensive per square foot as the Rayburn Building at a time when inflationary pressures are draining the purses of most American families and when restoration would be cheaper by far? I hardly think so.

Unfortunately, when we start to get down to brass tacks and discover just how expensive a west front extension would be and how little we know about the costs and feasibility of restoration the alarmists cry, "But the Capitol will collapse if we don't start extension." This charge is just so much poppycock. The Architect himself has never seriously claimed that the Capitol dome will come crashing to the earth if we do not extend now. In fact, even were we to provide extension funds immediately, it would take 12 to 18 months for the planning work to be completed before a hand would be laid on the west wall to begin actual construction. Mr. Campioli, the Assistant Architect, told me during hearings on the legislative appropriations bill that he would not be in a position to request funds for early phases of the construction work until next year when we consider the legislative appropriations bill for fiscal 1971. Of course it would take additional time after the bill was signed into law to let the bids for this work.

Certainly we could follow the same timetable for restoration. If a 6-month study showed that restoration was both feasible and desirable we could proceed to fund the beginning steps in the shoring up process in next year's legislative appropriations bill. What we cannot afford to do is fail to start the restoration study now. By biding our time we are merely playing into the hands of those who would let the west front crumble, neglecting to fill up cracks which are worsened by winter ice accumulations, refusing to scrape off countless layers of paint, and assuming that things will eventually get so bad Congress will have no choice but to extend.

We are told that the proposed west front extension will add a great deal of much needed space for both Members of Congress and visitors. To be specific it will provide 115 offices, 38 bathrooms, two dining rooms, two cafeterias, two auditoriums, two escalators, and eight elevators to the Capitol. But these auditoriums and dining rooms will simply be duplicating similar visitors' facilities that are planned for Union Station, barely two blocks away. I submit that it would be highly irresponsible for Congress to commit itself to such wasteful duplication at a time when the race for the construction dollar has pushed interest rates to astronomical levels—so high that homeownership is becoming a

privilege rather than an accepted norm of American life.

Mr. COOK. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. COOK. How many offices did the Senator say this would provide?

Mr. PROXMIRE. Ninety-eight.

Mr. COOK. Well, as a freshman Senator, I hope that I am not stepping on anyone's toes, but it seems to be happening more frequently that when I am invited to the Capitol I am invited to someone's—I hesitate to use the word "hideout"—to someone's office where he will have absolute privacy. I do not know how long one has to be here to get one of them, but I am wondering whether the 98 offices which will be built in that section will be an extension of that particular kind of privilege.

I can only say to the Senator that I very much support his amendment because the space, really, is not needed in this building. It is needed, so far as we are concerned, across the street. When we talk about the creation of 98 new offices and 38 bathroom facilities, I have a notion that these facilities are not going to be available to committees or subcommittees. Apparently, they will be available either to senior Members of the House or, conceivably, to senior Members of the Senate. I must confess that I think the sum of from $45 to $70 million could be better utilized, that we should utilize our money and our space a little more prudently.

Mr. PROXMIRE. I want to thank the Senator from Kentucky. I think he makes a point that cannot be rebutted.

As I am going to point out in a minute, the bill provides for more space adjacent to the New Senate Office Building. We have the money for that in this bill; thus we are duplicating it.

Mr. CASE. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I am happy to yield to the Senator from New Jersey, who is a cosponsor of the amendment and has been working hard in its direction.

Mr. CASE. As a cosponsor, I want to say how happy I am to find the Senator from Kentucky (Mr. COOK) back in the right area. He is a good man. I said earlier, at one time, that he was one of the bright stars in the new firmament around here and I am glad to have this reestablished to my own satisfaction in this good cause.

Mr. COOK. I must confess that I have had an offer from him that I might have his cubbyhole. Let me say, in all honesty, that I wish to thank him very much.

Mr. PROXMIRE. Mr. President, furthermore, there has been no survey of congressional space requirements worthy of the name in connection with this planned extension. There is no comprehensive plan for the future development of Capitol Hill to meet projected space requirements. We have no way of knowing what is needed and we have no comprehensive plan for meeting present and future needs. In the absence of this information, how can we say that space should be provided through an addition to the Capitol Building rather than through the extension of the New Senate Office Building, or some other expansion project? How can we even know how large a new building or an addition should be? The answers are very simple. We cannot know. We would be going into an extension project blindfolded.

Mr. President, the very bill we are considering today provides $1,250,000 for the acquisition of land destined for the extension of the New Senate Office Building. Those who cite space needs in urging extension of the Capitol overlook the fact, as stated in the committee report, that once this land is acquired—and it will be acquired quickly—by building an enclosed bridge between the new Senate Office Building and the Capitol Hill Apartments, at a cost of approximately $27,000, additional space would be made available immediately at very little expense.

Of course, once the New Senate Office Building has been extended, additional space will be available. A great deal of additional space. Has this added space been taken into account by those who advocate west front extension? I seriously doubt it.

I understand that it was developed during the House debate on this project that the interior division of the proposed extension was not immutable—that any number of changes could be made. Thus we are faced with the specter of a haphazard development of the interior of the proposed extension of the west front. We are confronted with the possibility that space will be divided up on the basis of political muscle rather than esthetic and utilitarian design considerations. A new kind of happening, with every man his own architect, may well be the result. The very uncertain nature of the extension planning as it now stands is simply one more reason not to proceed with extension.

I could dwell at some length on the historic significance of the west front of the Capitol, but I think the distinguished Senator from Florida has already done that. So I will conclude by saying we should remind ourselves that we owe it to the American people to spend their dollars as wisely as we know how at a time when inflation waters down the incomes of countless American families. Can we in good conscience embark on a multimillion dollar expansion project, largely for our own convenience, at a time when we are asking State and local governments to hold the line on construction spending—at a time when the President is cutting back on Federal public works spending by 75 percent—at a time when a tight money policy has made it next to impossible for countless numbers of American families to own their own homes? Who would go back to his constituents having voted for a $45 million extension of the Capitol on the basis of inadequate evidence and tell them that they must wait for more Federal aid for education—they must wait for adequate Federal assistance for sewage works construction—they must wait for tax relief, and they must not spend their own savings because it is inflationary? If we are to apply the same standard to ourselves that we seem to be applying to the American economy as a whole, then we should not approve the first step in a project to extend the west front of the Capitol which will cost a minimum of $45 million—particularly when we have no real knowledge of the cost and feasibility of restoration.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. ALLOTT. I have listened to the Senator's remarks with great interest, as well as those of the Senator from Florida, who feels so strongly about the historic attributes of this situation.

The Senator was present at the markup of the bill in committee, as was the senior Senator from Colorado. As I understand the situatioon, it is the contention of those who want the west front restored that it should be restored in the same stone of which it is now built. Is that correct? Perhaps the chairman of the committee could answer that question. I am not sure.

Mr. PROXMIRE. I think that is correct, but let me say to the Senator from Colorado that it is my understanding that that would be a part of the study of feasibility to be made by the Park Service. If that recommendation were to be that it should be built of granite or marble, and that it would be feasible and last much longer, that recommendation should be followed; but it is my understanding that we assume it would be replaced with sandstone.

Mr. ALLOTT. No one should be in the position of second guessing the Founding Fathers of our country, who did this, but the fact is that they constructed the Capitol using materials which were then available.

I do not know whether the Senator had occasion to go into the situation with respect to the restoration of east front. I believe it is a fact, and I do not think anyone can contradict it, that as long as we have a sandstone structure we are going to have deterioration of the sandstone underpinnings, and we are going to have deterioration of any sandstone that is exposed to the elements.

As I remember my physics, when water freezes, it exerts a pressure of approximately 1 ton per square inch. So if we have sandstone which is exposed to the elements, no matter how we try to seal it, water will get in it. When it freezes, there will be subsequent flaking off of that sandstone.

I think it becomes important, no matter how wedded we may be to the historic aspects of the situation, to be practical. To me it is not practical to carry our worship of history so far as to demand restoration with the same materials, when time itself will bring us to the same place we are now.

Mr. PROXMIRE. I agree wholeheartedly with the Senator from Colorado. I would not be wedded to the fact that, because our forefathers chose sandstone which came from a certain part of the country, we should do precisely the same. I agree that the material should be modern, up to date, on the best advice that the best architects can give us. Since the architects believe the Park Service is capable of doing it and having the appropriate architects make recommendations on the material, as well as the design, it seems to me this study should give us that kind of answer.

Mr. ALLOTT. I made my comments after hearing the remarks of the Senator from Florida, for whom I have great respect; but I think we can carry the worship of history a little too far. It would be foolish, in my opinion, to reconstruct and to restore the west front in that way.

Mr. PROXMIRE. Of course, the Senator is right. We would not have the same sandstone, anyway. It would have to be new. So whether it were new sandstone or granite or marble, the best way to proceed would be in terms of economy but also in terms of durability.

Mr. ALLOTT. I have another question to ask the Senator. I was told that 1 day last summer 30,000 or 35,000 visitors went through the Capitol. I heard the distinguished chairman of the subcommittee make a remark to that effect during the markup of the bill in committee. May I inquire of him how many visitors a year go through the Capitol?

Mr. MONTOYA. Between 5 and 7 million.

Mr. ALLOTT. Therefore, I would like to propound this question, if I may, to the distinguished Senator from Wisconsin. I know he has given this matter much thought; 30,000 or 35,000 people went through the Capitol in 1 day. Between 5 million and 7 million go through the Capitol in the course of a year. The prospects are that even more of our citizens will in the future be able to visit the capital of their country and look at its historic aspects.

Does the Senator think we can continue to accommodate those visitors with such facilities as restrooms and restaurants? They bring their children. We hear children in the hallways saying to their mothers and fathers, "I want to eat." We have seen and heard that a thousand times since we have been here. How does the Senator think we can hope to accommodate the visitors of the future, as well as present visitors, with a mere restoration?

Mr. PROXMIRE. The answer, of course, is that there is a plan, which we expect to be implemented, for a visitors center at Union Station.

The Union Station, as the Senator knows, is convenient. It is only two or three blocks away, and the Visitor Center there would provide the auditorium space, the restaurants, and all the facilities which would be duplicated here if we extended the west front, and at a far lower cost—perhaps not quite the same way, but at a lower cost.

Mr. ALLOTT. I do not wish to be facetious, but two or three blocks for a little boy who has to go is a long way to go.

I think there is some truth in what the Senator says. This is the thing that concerns me about the two proposals.

Mr. PROXMIRE. One weakness in American life is the failure of people to take enough exercise, walk enough, and develop the standard of health they should. One thing they could do which would help them, it seems to me, would be to show a willingness to walk a distance such as that from the Union Station and back.

Mr. ALLOTT. Let us not put that burden on everyone.

I am concerned about this aspect of the matter. I am also concerned about another aspect which the Senator mentioned, regarding the lack of any firm figures on the reconstruction of the present west front. This concern has been voiced by me as well as by the Senator from Wisconsin and other members of the committee; I thought it was particularly significant in the light of the apparent legislative history that it was planned to reconstruct the west front from the very soft stone of which it was originally constructed. The question of how we were going to provide for visitors in the future seemed to me to be another vital point.

I thank the Senator for yielding.

Mr. CASE. Mr. President, I rise in favor of our amendment, which would bar funds for planning the extension of the west front of the U.S. Capitol.

Under the amendment, offered by Senators PROXMIRE, KENNEDY, myself and others, the $1.7 million earmarked by the Appropriations Committee for prebid planning of the proposed extension would be stricken from legislative appropriation bill.

The amendment would, however, leave untouched $250,000 which the committee directed be used for carrying out a study of restoring the west front of the Capitol. Under the committee's language, the study will be performed by historic preservation experts in the Department of the Interior.

It is our conviction that the Congress should not embark upon the Architect's plans for extending the Capitol until the restoration study has been made and fully considered. If the study shows that restoration is not feasible, the Congress can then proceed with the extension.

There is no dispute that the west front is deteriorating. Emergency repairs have been made and I am confident the Congress will provide such funds as may be needed for further shoring of the west wall.

There is, however, a continuing dispute over the permanent work that should be undertaken. The controversy boils down to extension versus restoration of the deteriorated west wall of our Nation's most important shrine.

The Architect of the Capitol has recommended a large extension of the west front.

Under his plan, the middle section with the columns would come forward about 44 feet. The adjoining segments would be extended 88 feet; the sections connecting the central port of the Capitol to the House and Senate wings, 56 feet.

By comparison, the east front, whose extension I and others vigorously opposed, was extended 32½ feet.

The proposed extension of the west front is no small undertaking. Four and one-half acres of floor space will be added to the Capitol under the Architect's plan. This will include two dining rooms; two cafeterias, two auditoriums, 38 rest rooms, eight elevators, two escalators and a total of 98 offices.

Do we need all or any of this to keep the west wall of the Capitol from falling down?

The cost of this proposal has been calculated at about $45 million. But judging from the escalation of costs in building the Rayburn Building, the final price tag on the west front is likely to be far higher.

I do not know about the House, but the Senate certainly needs more working space. But is the only way to get it to dismember the west front and add some acres of unneeded facilities?

No detailed study has been made of restoring the west front as opposed to extending it.

The Architect does tell us that by his calculations, restoration would cost between $10 million and $50 million. To me this big spread in his estimate is an admission that he really has no idea as to what the cost will be.

On the other hand, the American Institute of Architects believes the spread would be no more than $10 to $20 million. The AIA further believes that a long-lasting restoration job can be accomplished, and should be undertaken.

Why restoration?

In testifying before the House Appropriations Subcommittee on Legislative Appropriations, Francis Lethbridge, vice president of the AIA, urged avoidance of west front extension:

"Which will erase the last externally visible work of the great pioneers of Federal architecture, William Thornton, Benjamin Latrobe, and Charles Bulfinch;

"Which will alter the noble terraces planned by Frederick Law Olmstead, the dean of American landscape architecture; and

"Which will obscure a significant chapter of this country's cultural history, burying forever the last remaining walls of the Capitol that date back to the founding of the republic."

Mr. President, today as never before, the public is rightly concerned about its environment. Around us air and water are fouled; noise proliferates; parks and open space are swallowed up.

The tangible evidence of our history is as much a part of our environment as all the rest. Our lives are enriched by visits to the places that recall for us the names, events, and ideas which shaped the growth of our Nation.

To alter or destroy an historical structure is as much a desecration of the environment as to fill in a marsh or run a freeway through an established neighborhood.

I predict that if the Congress grants the Architect the planning funds he has requested, this will be a downpayment on the extension of our Capitol. There will be no turning back.

Extending the west front of the Capitol must be held off until we know whether restoration is a possibility. I urge the adoption of our amendment for this purpose.

Mr. PROXMIRE. Mr. President, will the Senator yield, so that I may ask for the yeas and nays?

Mr. CASE. I am happy to yield to the Senator for that purpose.

Mr. PROXMIRE. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MONTOYA. Mr. President, I believe it to be apropos and, indeed, essential for me to state here that the funding provided, and the conditions placed on the funding, do not necessarily place the Senate, or even Congress, on record as approving or giving the green light for extension of the Capitol. I want that clearly understood. The Appropriations Committee certainly wants to continue to look at this picture. That is why we have outlined the specific procedure to travel two roads. Some people may call that impractical. Others may call it impotent. But in view of the background and the exigencies of the situation, and the uncontroverted evidence that is in the record, I feel that the Appropriations Committee is traveling a very safe route in making this recommendation.

First of all, the restructuring or extension of the central part of the west front of the Capitol was authorized by Congress a number of years ago. Many studies have been made, and pursuant to a mandate from Congress and the proper funding to carry out that mandate, the Commission for the Extension of the Capitol entered into a contract with one of the fine engineering firms of this country, Thompson, Lichtner, & Co., of Massachusetts, and that company was instructed to look at the makeup of the west front and to make a determination as to whether or not we should proceed along the route of restoration, or proceed with extension.

The firm of Thompson, Lichtner & Co. proceeded to do what had to be done to make the determination. They filled five volumes with reports of scientific findings resulting from core borings of the walls, taking out samples of the sandstone and the material that was behind the sandstone, and then the rubble wall in the interior, and, based upon the findings, they came to the conclusion that restoration was not feasible, and extension was recommended.

I want it clearly understood, Mr. President, that I am not standing here defending extension, nor am I standing here saying that restoration is feasible. What I am saying is that we have expended thousands upon thousands of dollars. We have entrusted a very capable Commission with the task of informing us as to what we should do. That Commission has unanimously stated to us that extension is the proper route.

I should mention the members who approved it. I refer to Speaker McCormack, Vice President Agnew, the late Senator Dirksen, Representative Ford, and the Architect of the Capitol. These are the members of the Capitol Extension Commission.

They have directed that the Commission ask for an initial appropriation of $2 million for the purpose of drawing up plans and specifications to proceed with the extension of this work. That is what we had pending in the subcommittee when we began the consideration of this problem.

We examined many witnesses along these lines. We went into the matter in depth. The witnesses who based their information and conclusions upon actual probing of the structure testified that restoration was not feasible. They recommended that we proceed with extension.

They also stated that we could not get the sandstone that is presently in the exterior of the west front since the quarries are extinct. They said, however, that we might possibly get some limestone. However, that was not conclusive, either.

It was pointed out that that would not cure the sagging of that west wall and would not prevent the necessity of propping up the west side of the Capitol. The only feasible way of propping up the west side of the Capitol was through an extension which would be strong enough to hold the Capitol in place and keep it from sagging any further.

It was testified that the Capitol was sagging at the rate of one-fourth of an inch a year based on last year's study, that it would prove dangerous to people eventually and that the present makeup of the wall had suffered from so much moisture and so much decadence that even shoring it up would not insure against further cracking and that this type of decadence would cause that side of the Capitol to collapse.

I am just relating what we had to contend with. So, in a spirit of trying to exact all the information and trying to give the so-called restorationists a chance, I ordered a hearing so that those who espoused restoration could come in and testify. We invited the different schools of thought who had been in touch with us. We asked the AIA to come in. And they came in with a committee of architects.

The sum and substance of their testimony was that they had looked at the findings as well as the report furnished and compiled by the Thompson, Lichtner & Co. On the basis of this report they felt that there should be a study with respect to the feasibility of restoration.

I then suggested during the course of my cross-examination that perhaps an independent agency could launch this separate study since they felt that Thompson, Lichtner & Co., being under the dominion or instruction or domination, as they said, of the architect, would not have findings that would conclusively prove that they were not prejudiced.

They suggested upon further questioning the National Park Service. It was pointed out that they had the capability to conduct this study.

It was then, in order to please the so-called restorationists and to bring justice to this situation and to provide for a complete study by both sides—those who wanted extension and those who now without foundation and study plead for restoration—that we evolved the idea of going on these two roads—namely, not to delay the plans and specifications route, but to take enough money out of that initial request to provide for a study to be conducted by the National Park Service or under its direction by someone else with respect to the feasibility of restoration. That is how we arrived at this solution.

We have not in our report or in our pronouncement stated that we endorse the extension of the west front. I personally want to reserve my judgment on further funding for extension pending the study on restoration.

I think that every Senator who supports the appropriation in its dual role or with its dual thrust feels the same way.

We are not endorsing extension of the Capitol. Surely I think all of us want the initial structure preserved if it can be done. I do, and I think I have voted in the past to preserve the west side of the Capitol. However, the decision we have to make is not whether we want to vent our patriotism for this sacred seat of government. The decision we have to make is whether we want to be practical in view of the exigencies of the occasion.

That is why I think it is apropos to say that throughout the history of the Capitol there has been controversy over every extension and the innovation of every structural change. From the beginning up to the present date, the Capitol has not been free from controversy.

The only remaining part of the initial structure or facade of the initial structure is the west front. It is in disharmony at the present time with the construction of the Senate and the House wings. It is out of scale. And certainly the pediment under the dome is out of harmony with the dome and with the rest of the structure.

These things have to be done. Whether they should be done now, I do not know. Whether extension versus restoration is now in order, I cannot say. All I can say is that we authorized extension and entrusted the Capitol Extension Commission with authority to make the initial steps in that direction. And we are now in effect saying, "You can plan on a suggested basis, but be sure to provide in your contract for plans and specifications that if restoration is found to be feasible and Congress decides that restoration is the route that we should take, then you, the Commission, be prepared to say, "We suspend the contract for plans and specifications at this point, and now we will take a look at restoration and go back to the committee, back to Congress, for a new determination."

Mr. PEARSON. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. PEARSON. Mr. President, I do not know anyone who has worked harder or has made a greater contribution to try to throw some light on a situation that is filled with confusion and conflict of testimony and doubt than the chairman of this subcommittee.

At the time of our conference, the subcommittee's conference, I think it was the chairman's proposal, to satisfy those who felt that the proper study for restoration had not been made, that there was a middle way, a center ground, and that was to proceed with, as it turned out, $1,750,000 for plans and specifications for the extension, pursuant to the authorization, but then to set aside $250,000 for a study and plans for the restoration.

At that time I raised some objection. It seemed to me that the two-road course was not the most feasible thing to do. To have $1,750,000 expended during the next fiscal year for plans and specifications in one direction and to go with

$250,000 in another direction seemed to cause great doubt and disturbance on my part. The subcommittee reported an authorization for extension and sent it to the full committee. Even greater responsibilities on my part at that time prevented me from remaining in the full committee that morning; and I found, by the report and by my conversations with the chairman, that the dual-road concept had been accepted. I still find it extremely difficult to accept—to go both ways at the same time.

If the $250,000 study turns out to be correct, the $1,750,000 is wasted. If the original authorization of $1,750,000 turns out to be the correct way to go, we have wasted $250,000. Frankly, I think there is still doubt in the subcommittee and in the Appropriations Committee to accept the dual-road concept and that we had better halt here and find some way to find the single road to joy and to find a route of more rationality.

I dislike to differ with my chairman on this. My respect is unlimited for his understanding and for the effort he has made. It just seems to me that this particular procedure is not in the best interests of proceeding on this project.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. YOUNG of North Dakota. Mr. President, I suppose the popular way would be to argue, for sentimental reasons, to restore the wall no matter what the cost. I listened to the testimony, and there was no indication whether it would cost $10 million or $50 million. If it would cost $5, $10, or $15 million, and that was all, I think I would prefer the restoration. But, so long as we are going into a large sum of money, we do need additional facilities, particularly restaurants and restrooms, for the millions of visitors who have a right to visit the Capitol.

We went through exactly the same arguments with respect to the east extension of the Capitol. There is nothing new about this. The Building Commission has been working on this for more than 5 years. As the chairman has pointed out, they selected Thompson, Lichtner & Co. to investigate this. Dr. Clair, one of their top architects, after studying and evaluating the condition of the west central front for the past 5 years, recommended extension, not restoration, as a proper remedial measure to be taken.

It is difficult to perceive how only a 6-month study by other consultants at this time, as proposed by the AIA, could yield results of comparable reliability, judgment, and dependability as those attained by Dr. Clair after 5 years study and vigilance.

Dr. Clair's findings and recommendations have been reviewed and concurred in by Speaker McCormack, Vice President Agnew, the late Senator Dirksen, Representative Ford, and the Architect of the Capitol as members of the Capitol Extension Commission; by four architects retained at the direction of the Commission to prepare plans for the extension—two are Fellows and two members of the American Institute of Architects; by two architects—both Fellows of the AIA—and one landscape architect retained at the direction of the Commission to act as advisory architects for the project; by the Assistant Architect of the Capitol who is an authority on restoration and served for 8 years as director of architecture at Williamsburg, during which time he was responsible for all architectural and engineering work required for the Williamsburg restoration project and directed the work of 52 architects, engineers, and research staff. Dr. Clair's recommendations have also been endorsed by the American Society of Registered Architects.

Mr. President, this is really nothing new. It is something we have been studying for 5 years, and we have the recommendations of the leaders of both the House and the Senate and of responsible engineers, and I think the time has come when we should take some action.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. TYDINGS. Mr. President, I am pleased to cosponsor the amendment deleting the $1.75 million appropriation for plans to extend the west front of the Capitol. I find it rather shocking that such a project, leading eventually to an unnecessary expenditure of over $44 million, is even being considered by Congress.

To embark on this costly project at a time when inflation is ever increasing and when the President himself has ordered a 75-percent cutback in Federal construction new starts is both unnecessary and unwise.

I am completely opposed to it.

Across the country the effectiveness and, indeed, the very legitimacy of our institutions of government are being criticized and questioned by young and old alike. To appropriate these planning funds, to approve the first step of a massive boondoggle—and the expenditure of $44 million on the west front extension is nothing less—would only confirm their suspicions that Congress acts wholly irresponsibly.

Instead of going ahead with the extension plans, we should first thoroughly study the alternative of restoring the Capitol's west front. This is the course of action recommended by the American Institute of Architects. It would adequately cover the repair work that the front admittedly needs and is by far the commonsense approach.

Through neglect and age the west front is now in a state of disrepair. As the AIA report on conditions of the west front of the Capitol states:

> Numerous cracks are in evidence on the exterior of the building. Some window lintels and keystones have cracked and slipped. Several of the architrave stones have sagged. The foundations, at some points, are not far enough below the finish grade to escape frost damage. However, none of the defects appear to indicate that danger of collapse is imminent or that correction is impracticable.

The report clearly indicates that a massive rebuilding effort to extend the Capitol westward is, architecturally speaking, not required. What is required is to restore the condition of the west front so that its structural weaknesses are corrected and its facade preserved. Modern technology now permits us to do this, and at considerably less expense than the proposed extension.

The amendment we are now considering leaves in the $250,000 provided by the bill for a restoration study to be carried out by the National Park Service. This would give us an idea of exactly what needs to be done to restore the west front and at what cost. It is the only sensible way to proceed.

Should this study reveal that restoration is, in fact, not possible, we can then consider other approaches to repairing the west front. But to leap forward now on a massive extension effort without first even exploring the feasibility of restoration is, quite frankly, irresponsible.

As a matter of public policy, I am strongly opposed to extending the Capitol's west front without first attempting to restore it to its original condition. There are three basic reasons why I favor such restoration and oppose extending the west front.

First. The cost of this extension will be approximately $44 million. The AIA estimates that restoration will run about $10 million. The difference of $34 million would be better spent on housing, conservation, mass transit, or other more worthwhile projects.

Extending the west front will cost $166 per square foot of floor space. This is five times what the Rayburn Building cost and that is the most expensive public building ever. It is three times what a modern office building costs and almost twice the cost of a well-equipped modern hospital.

To spend $44 million on this project at the present time simply makes no sense.

It borders on sheer lunacy when you consider that the extension will probably cost more than $44 million. The Architect of the Capitol, who seeks the west front's extension and provided us with the $44 million estimate, underestimated the cost of the Rayburn Building by $35 million. It is not a good precedent.

Evidently the Defense Department is not the only Government body troubled by cost overruns.

Second. Extending the west front will remove from sight the last remaining wall of the original Capitol Building. It will destroy a wall built in the time of Adams and Madison. The Capitol is more than just a roof over the heads of Federal legislators. It is a symbol of our commitment to democracy and a reminder of our proud heritage. The west front has significant historical value and must not be tampered with, unless it is absolutely necessary. Such necessity has yet to be shown.

Third. The simple fact is that the extension is not required. Do we truly need the cafeterias, restrooms, auditoriums, and additional office space that extending the west front will bring? The answer is definitely "No," particularly in view of the Visitor's Center now being constructed at Union Station within walking distance of the Capitol. And even if the answer were "Yes," should such facilities be provided in the Capitol? Here again the answer is "No." The primary purpose of the Capitol is to provide space for floor consideration of legislation and di-

rectly related activities. It is not to provide for omnibus activities only indirectly concerned with this legislation. Again, even if the answer to this second question were "Yes," should such facilities be constructed now when the President has called for fiscal restraint to curb inflation? The answer is "No," and for obvious reasons.

The legislative branch of Government has directed the executive branch to restrain its spending. To be truly equal, it should practice such restraint itself, and I can think of no better project on which to curb spending than this one.

Mr. President, I urge my colleagues to support the amendment and oppose the appropriation of $1.75 million for planning the extension of the west front of the Capitol.

I ask unanimous consent that the following editorials be printed in the RECORD: "Affront to the Capitol," appearing in the New York Times on October 21; "Capitol Crime," appearing in the New York Times on October 6; and "Can the West Front Be Restored?" appearing in the Washington Post on September 17.

There being no objections, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, Oct. 21, 1969]

AFFRONT TO THE CAPITOL

The Senate, in an excess of diplomatic zeal, is doing its best to have it both ways on the West Front of the Capitol. According to the Appropriations bill due on the Senate floor, $1.75 million of the $2 million already appropriated by the House would be voted to start work on the extravagantly unnecessary expansion scheme favored by Mr. Stewart, the nonarchitect of the Capitol. At the same time $250,000 would be appropriated for a study by the National Park Service on the feasibility of restoring the West Front.

That is certainly a glorious contradiction in terms and a superb double-headed political ploy—$250,000 for preservation and $1.75 million for destruction—take your choice. The $1.75 million would just be the push to get the ball rolling on a grotesque $45-million rebuilding scheme that could rise to $70 million without even trying. It is a proposal to which the professional world of architects, historians and environmentalists and a large number of thinking and feeling citizens are violently opposed. It enjoys favor with few except the architect of the Capitol and his architects who will do the job.

The Senate could demonstrate a fine sense of economy and art by eliminating the $1.75 million and voting only the $250,000 to the Park Service for an immediate preservation study. This is one case where the issue is clear: Spare Mr. Stewart's feelings or spare the Capitol.

[From the Washington (D.C.) Post Sept. 17, 1969]

CAN THE WEST FRONT BE RESTORED?

It was hardly surprising that the House Appropriations Committee voted $2 million for the preparation of plans for an extension of the West Front of the Capitol. It is hard for members of the House to turn down an urgent plea from their Speaker. But is will be a sad day—for the House, for history, and for common sense—if the appropriation is approved as it now stands when it comes before the full House this week.

Speaker McCormack may well be right when he says that something must be done about the deterioration in the Capitol's west wall. Certainly the wooden braces and the evidence of surface decay indicates that some sort of action is needed. But that something is not necessarily an addition to the building that would cost at least $45 million, would alter the handsome terraces planned by Frederick Law Olmstead, and would wipe out the last remaining walls of a building that withstood the efforts of the British to destroy it a century and a half ago. Before taking such a step, Congress ought to be sure that no other solution to the problem of deterioriation is feasible. It would ask no less from a government agency that sought to expand any of the historically important buildings under its control.

The proper steps for Congress to take this year are to appropriate funds to have a study made of the possibilities for restoration and to establish a commission of prominent architects, historians and others to work out a long-range development program for the Capitol grounds. The American Institute of Architects, whose members know far more about the problems of restoration and construction than do any of the members of the existing Commission for Extension of the United States Capitol, is arguing that restoration can be done with sandstone from the same quarry from which the original walls were built. Although that group concedes it does not have the money to make a thorough study on its own, surely its recommendations are entitled to more weight than the *ipse dixit* of the Capitol's non-architect, J. George Stewart, that restoration is too difficult and too expensive to undertake. Only a careful study by experts—and these are not likely to be found on Capitol Hill—can settle the question of whether restoration is feasible. Without knowing the answer to that question, Congress can vote for an extension of the West Front only if it ignores both history and common sense.

[From the New York Times, Oct. 6, 1969]

CAPITOL CRIME

The so-called Architect of the Capitol, backed by an unthinking House, proposes to keep the nation's prime historic monument from falling down by erecting a $45-million extension for the most ludicrously expensive restaurant, cafeteria and hideaway office space in the world—and all of it behind a new and preposterous false front.

It must be made clear—since it is being deliberately muddled in Congressional minds—that there are other, more sensible, appropriate and less costly ways to hold up the walls, and more responsible ways to get that space. The dome will not come tumbling down around legislators' ears as the only alternative to the present plan. The West Front obviously needs strengthening and restoration immediately. But that is all it needs, and all it should have, in the interest of historical and esthetic integrity.

Professionals have shouted themselves hoarse in the face of the elaborate schemes and reports from the office of the non-Architect of the Capitol, whose ossified imperial style and dogged amateur taste must be giving his distinguished predecessors, Bulfinch and Latrobe, sepulchral fits. But the amateurs on Capitol Hill go right ahead.

The House has already voted $2 million to start the $45 million attack. That $2 million is exactly the sum of the first year's authorization of the Historic Preservation Act of 1966. The $32 million authorized by the Preservation Act for a three-year period is less for the whole country's heritage than the cost of the Capitol mutilation alone.

In the light of this Congressional delinquency toward historic preservation, Congressional generosity toward historic destruction is even more appalling. It is doubly appalling after the murder and embalming of the East Front, under the same auspices. The Senate can take corrective action now by backing the most direct kind of restoration. This would cost about $10 million, according to the American Institute of Architects, or less than one quarter the cost of the extension.

The Capitol is a public building, not a private club. It belongs to the nation. It will not be served by the profligate distortion of history and art.

Mr. TYDINGS. Is it not a fact that the cost of the extension could ultimately be many millions of dollars more than the restoration?

Mr. MONTOYA. On the cost of restoration the AIA estimated——

Mr. TYDINGS. For the RECORD, what is the AIA?

Mr. MONTOYA. The American Institute of Architects, who appeared before the committee. They testified that the cost of restoration could be between $10 and $20 million.

Mr. TYDINGS. $10 to $20 million?

Mr. MONTOYA. The people from the Capitol Architect's Office testified that the cost of restoration could range from $10 to $50 million. The other figure was $10 to $20 million.

Mr. TYDINGS. The Office of the Architect of the Capitol?

Mr. MONTOYA. Yes. Mr. Campioli testified to that.

Mr. TYDINGS. But the American Institute of Architects testified that it could cost as much as $10 million, but in no circumstances over $20 million. Is that not their testimony?

Mr. MONTOYA. I think that is correct.

May I say something else, too, along those lines. It was agreed by both sides that if we decided to go the route of restoration, no contractor would take it in a bid basis, that it would have to be on a cost-plus basis.

Mr. TYDINGS. Who decided that?

Mr. MONTOYA. The witnesses on both sides. I posed that question. And that restoration would have to go on a cost-plus basis.

Mr. TYDINGS. My first question to the Senator from New Mexico is this: Is it not a fact that the extension of the west front could cost the taxpayers of the United States many millions of dollars more than the restoration?

Mr. MONTOYA. Yes.

Mr. TYDINGS. It is a fact.

Mr. MONTOYA. Yes. I agree with the Senator from Maryland.

Mr. TYDINGS. Is it not a fact that every time the Architect of the Capitol has revised his figures on the cost of the extension, he has increased it by as much as $3 or $6 million, until today, although the original estimate was in the $17 million range, it is now up in the $40 million range?

Mr. MONTOYA. It is now $45 million.

Mr. TYDINGS. What was the Architect's original estimate of the cost of the Rayburn Building?

Mr. MONTOYA. We developed that in the hearings, too.

Mr. TYDINGS. Was that not the same——

Mr. MONTOYA. I might state in all fairness that the reason for the increase has been that the cost of construction has escalated at the compounded rate of 7 percent per year.

Mr. TYDINGS. Correct.

Mr. MONTOYA. The $45 million figure is an escalated compounded figure up to the time of concluding the construction.

Mr. TYDINGS. Correct. Yet how much is that $45 million going to escalate before the extension is finished? Is it going to escalate like the figure of the Architect of the Capitol on the Rayburn Building?

Mr. MONTOYA. Under today's inflated prices—and I do not mean to be partisan—the cost of public construction is escalating at the rate of 1 percent per month.

Mr. TYDINGS. So when the Senator asks the Senate today to embark upon a program of spending $44 million of the taxpayers' funds for an extension of the west front rather than on restoration, the Senator is saying that in addition to that $44 million the taxpayers are going to have to pay in addition an amount equivalent to 1 percent per month depending on how long it takes to build it.

Mr. MONTOYA. I do not think the Senator fully understands what I said. I said the $45 million as of today took into consideration a 7-percent annual increase during the course of construction and up to the time of concluding construction.

Mr. TYDINGS. So it is the Senator's feeling that this $44 million figure is a top figure.

Mr. MONTOYA. As of today.

Mr. TYDINGS. And the Senator is relying on the Architect of the Capitol. Is that right? Is that who the Senator is relying on?

Mr. MONTOYA. Yes, but I am relying on all the witnesses who testified to that figure.

Mr. TYDINGS. For the RECORD, what was the top figure of the Architect of the Capitol when the Congress passed the appropriation for the plans, the working plans, for the Rayburn Building?

Mr. MONTOYA. I do not have those figures offhand, but I want to say that the cost of the east front——

Mr. TYDINGS. I wish to refresh the Senator's recollection. Would the Senator agree it was $34 million under the final cost?

Mr. MONTOYA. But the cost of the east front of the Capitol was estimated at $10 million and the final cost came to $11.5 million or thereabouts.

Mr. TYDINGS. Now, let us discuss the so-called survey or study which the Architect of the Capitol had made which resulted in the testimony that we go ahead with extension rather than restoration. Is it not a fact that the Architect of the Capitol picked that firm himself without any consultation whatever with the American Institute of Architects?

Mr. MONTOYA. The Commission on Extension of the Capitol picked this firm.

Mr. TYDINGS. But as a practical matter, was it not the Architect of the Capitol himself who picked that firm?

Mr. MONTOYA. I could not answer that with any degree of authority.

Mr. TYDINGS. Is it not a fact that that firm knew what they were supposed to come back with the day they were picked? There was never any question in the mind of the Architect of the Capitol but that that firm would come back with a recommendation to go ahead with extension rather than restoration, was there?

Mr. MONTOYA. The Senator is asking me to become an expert witness.

Mr. TYDINGS. The Senator presided over the hearings. The Senator was there.

Mr. MONTOYA. The Senator is asking me to give an opinion which is not based on any facts that were before the committee.

Mr. PEARSON. Mr. President, will the Senator yield?

Mr. TYDINGS. Will the Senator take the word of one firm, which was paid $33,000 by the Architect of the Capitol, who had already stated publicly what he wanted, against the weight of authority of the AIA with respect to what was feasible?

Mr. MONTOYA. I am sorry the Senator missed my allusion to this point in my presentation a few minutes ago. I stated that because certain parties felt aggrieved that this report might have a taint of prejudice, we thought it proper to commission or direct the commissioning of a separate agency to conduct this survey, and that is the very thrust of our alternate plan here today.

Mr. PEARSON. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. PEARSON. Mr. President, I wish to point out that although I am in sympathy with some of the positions developed by the distinguished Senator from Maryland, there might not be anything evil or deceptive in the hiring of a firm wherein the inference was that they were to go out and come back with some study relative to extension. The truth is that Congress authorized this extension in 1955.

Mr. TYDINGS. That is the point I was trying to make. They were ordered to do what they did.

Mr. PEARSON. I am not sure they were ordered to do what they did.

Mr. TYDINGS. That was the question I was trying to develop. The firm was given a job to do and they did it. I say they knew what they were supposed to do.

Mr. PEARSON. The matter I am directing attention to is that it might not be deception.

Mr. TYDINGS. Not deception.

Mr. PEARSON. It might be in relation to what Congress already authorized.

Mr. TYDINGS. I do not know about Congress, but it was directly in relationship to what the Commission told them to do, and that is what I was trying to develop.

Mr. MONTOYA. I want to say in fairness to the Commission that it is my belief the Commission did not tell this firm, "Go out and get us a report for extension of the Capitol." If that is what the Senator is trying to get me to admit, I will not admit it. I think this is a prestigious commission. I think the testimony will show that this firm went out to probe into the structure of the Capitol and it was to come back with a comprehensive report showing whether or not restoration was feasible; and they did come back with a comprehensive report on that point, which has not been rebutted except for opinion evidence on the part of the AIA.

Mr. TYDINGS. I wish to follow along the lines of the suggestion of the distinguished Senator from Kansas because I think he went to the heart of the matter. I did not want to give the impression that I felt the firm was doing anything devious.

I was asking the Senator if they were not given a job to do, namely, to come back in favor of extension rather than restoration.

Mr. MONTOYA. Before the Senator goes further, I wish to read from the report of Thompson & Lichtner.

Mr. TYDINGS. What page is that on?

Mr. MONTOYA. Page 558 of the hearing record.

In dispatching the five volumes entitled "Report on the Structural Condition of the West Central Portion of the United States Capitol" they stated:

> Upon completion of examinations, analyses, and studies, together with recommendations with respect to such remedial measures as may be deemed necessary, including recommendations as to (1) whether the existing wall, if found deficient, can be repaired in its present condition, (2) whether the existing wall can be refaced with marble in its present condition, (3) whether remedial action requires extension of the west central front and its reconstruction in marble, or (4) whether any other means of preservation are deemed feasible and advisable.

I think that should indicate that this firm had been instructed to probe into every facet of feasibility with regard to the west front.

Mr. TYDINGS. How does the Senator account for the fact that already, as of March 21, 1967, $240,000 had been spent on the preparation of preliminary plans and estimates for the west front extension?

Does the Senator mean to tell me that he thinks the Architect of the Capitol did not tell this firm he wanted to go ahead with the extension already having spent almost a quarter of a million dollars on preliminary plans for an extension? It does not make sense. Preliminary plans and specs imply construction and approval of a project.

One final question to the Senator from New Mexico. How can the Senator justify, in a period of time like this, with so much inflation, going ahead with an extension which admittedly, by the testimony in the Senator's own hearings, can cost as much as $20 million more than restoration? How does the Senator justify it?

Mr. MONTOYA. In the first place, I have stated here that neither I nor any member of the Appropriations Committee, in voting for the alternative procedure, went on record as favoring extension. I so state that to the Senator from Maryland. I so stated that in my preliminary remarks.

We are trying to find out what course we should take in the future.

Mr. BYRD of West Virginia. Mr. President, will the Senator from New Mexico yield at that point?

Mr. MONTOYA. I yield.

Mr. BYRD of West Virginia. The Senator from New Mexico so stated during the markup of the bill in the Appropriations Committee. He made that very clear.

Mr. MONTOYA. That is correct.

Mr. TYDINGS. How does it follow,

when in 1967 we first appropriated $240,000 for preliminary plans for the extension, that now we ask for $1.75 million for continuation of these plans? I just do not see how we can say we are still—we have not made a decision to go ahead with construction. I think we should study the feasibility of restoration rather than proceed with the second step, the $240,000 I mentioned being the first, of construction which this planning money represents.

Mr. MONTOYA. Let me answer the Senator from Maryland. The House provided for that appropriation in 1967.

Mr. TYDINGS. Yes.

Mr. MONTOYA. The Senate struck it out.

Mr. TYDINGS. The $240,000?

Mr. MONTOYA. Yes.

Mr. TYDINGS. That was $240,000 which they went ahead and spent, relating to preliminary plans for an extension.

Mr. MONTOYA. That was stricken out by the Senate. It then went back to conference.

Mr. TYDINGS. It was passed and spent.

Mr. MONTOYA. Right.

Mr. TYDINGS. Here we are again on the next step, spending almost $2 million on it. What difference does it make? We are nibbling away at it. It is difficult for me to justify the expenditure of such a tremendous amount of funds for extension of the west front in view of the present inflation and the heavy taxes the people of this country are already paying today.

Mr. MONTOYA. There is no money in here for construction, I want the Senator to know.

Mr. TYDINGS. I know, but we have already spent $240,000. Now we come back with $1.75 million, and each time we nibble away a little more, it is another victory for the Architect of the Capitol, and another step closer to the ultimate expenditure of what the Capitol Architect says will be $44 million. Planning is part and parcel of construction and by approving planning money we are, in effect, approving construction. I do not believe for 1 minute that the architect is right with his estimate. He is not going to be any more accurate on the extension of the west front than he was on the Rayburn Building.

I think the Senator will recall this, that if it goes through, it will cost substantially more than $45 million, even though this is more than $20 million over the cost of restoration. I do not see how we can keep going forward with it.

Mr. BYRD of West Virginia. Mr. President, will the Senator from New Mexico yield?

Mr. MONTOYA. I yield.

Mr. BYRD of West Virginia. I have not listened to all of the debate this afternoon, but I heard it during the markup in the Appropriation Committee, and it is my understanding that it is the Senator's position that he is not advocating extension of the west front.

Mr. MONTOYA. That is correct.

Mr. BYRD of West Virginia. He is not advocating restoration.

Mr. MONTOYA. That is correct.

Mr. BYRD of West Virginia. He is not advocating either in preference to the other. He is simply advocating that we appropriate some money for the survey, and then make our decision on the basis of the result of that survey. In the meantime, money for planning an extension would be in the bill in the event the survey so recommends.

Mr. MONTOYA. That is correct.

Mr. TYDINGS. I have the greatest respect for the distinguished Senator from West Virginia but when we appropriate money to go ahead and build, money which goes toward building the west front, whether we are for it or against it, when we vote "yea" for the appropriation, we are taking a step in that direction.

Mr. BYRD of West Virginia. He is not doing that. The bill does not appropriate money for the building of——

Mr. TYDINGS. We are appropriating money relating to the preparation of plans for the extension of the Capitol. Any way we cut it, we are spending money. It may not be for actual construction, but it is money that has to be spent to extend the west front of the Capitol. We can say we have not taken a position but when we vote "yea" to spend that money, but we are taking a position so far as the taxpayers are concerned.

Mr. BYRD of West Virginia. Mr. President, I intend to vote, as the Senator will, for the Proxmire amendment, but I do not want the position of the Senator from New Mexico to be misunderstood here.

Mr. TYDINGS. I asked the distinguished Senator from New Mexico before whether he was for or against the amendment, because I was not certain. It is difficult to determine. If we vote aye for the expenditure of money on a project that we are not in favor of——

Mr. MONTOYA. Let me say to the Senator from Maryland that while part of this money is to be used for plans and specificatons, it will be used for any restoration that is found to be in order also.

Mr. President, I yield the floor.

Mr. ELLENDER. Mr. President, many of the points I had intended to make already have been presented to the Senate during this debate.

I can well recall during the 80th Congress, when Congress provided for the construction of the New Senate Office Building, that I fought the program for about 9 years. I proposed at the time that we extend the east front of the Capitol and thereby provide enough space so that Senators who were really in need of space could obtain it. I felt we could more or less kill two birds with one stone, and effect a saving for the taxpayers. I also suggested that in order to take care of Senators who needed space, we should use every available spot in the Old Senate Office Building so as to provide it.

My idea was to use the old Senate Office Building and the extension of the east front to provide the needed space. But we ended up in doing all three of the actions that were proposed. We have used every available space in the Old Senate Office Building, we extended the eastern front of the Capitol where 50-some offices were provided, and we built a new Senate Office Building.

Today, 10 years later, we are being asked to extend the west front of the Capitol and provide not 98 offices, as my good friend from Wisconsin stated, but 115 offices, according to the committee hearings. It has been my observation here, since I came to Capitol Hill, that more space begets more employees. That can easily be demonstrated. As a matter of fact, I will do it through an amendment which I shall propose in a few minutes, after we vote.

Mr. President, there is no doubt in my mind that the $1.75 million the committee has provided in the bill is not only to study the feasibility of an extension, but to provide specifications for the construction of an addition to the west side of the Capitol. We are staring down the exhaust pipes of the bulldozers.

I think it would be a shame for us to provide for an extension of the Capitol because, as was said by my good friend from New Mexico, some of the architects believe that it is necessary for us to do so in order to hold the walls where they now are. That is the position taken by some of the architects. Others take a different position.

It seems to me that, with the knowledge we have already gathered from various reports made by famous engineers, the restoration of the Capitol is feasible, and that we should proceed in that direction. At least we should not rush hurriedly along the opposite path.

One of the arguments made for extending the Capitol is to provide more room to take care of the visitors at the Capitol and to provide them with more restaurants. When the extension of the eastern part of the Capitol was suggested, I tried to provide for restaurants to be built in the basement of the new extension, so that the cost to the taxpayers for operating the restaurants could be reduced. The idea I had in mind was for Representatives and Senators to use the same space.

There is no doubt in my own mind that if it were possible to have one restaurant for all Senators and all Representatives, and have it large enough to accommodate visitors, we could save a lot of money. Why do I say that? As Senators know, we have restaurants in the New Senate Office Building, in the Old Senate Office Building, and in the Capitol; It costs the taxpayers of this Nation an annual subsidy of $497,000 to operate those restaurants. Add another restaurant or two, and the subsidy might be increased to $700,000 or $800,000. There seems to be no end to it.

As far as I am concerned, I shall support the pending amendment. It is the same amendment I submitted to the committee before the bill was reported to the Senate. I joined my good friend from Wisconsin (Mr. PROXMIRE) as a cosponsor, and I hope the amendment passes.

Just as surely as the Senate votes to provide $1.75 million to prepare plans and specifications for the expansion of the west side of the Capitol, that is the course which will be taken. I would much prefer that we proceed to spend $250,000,

or even more if necessary, to study plans, not to extend, but to restore the present structure. In that way we can save millions of dollars for the taxpayers.

I doubt that the cost of restoring the west side of the Capitol would be more than $20 million to $30 million, as compared with perhaps $75 million or $100 million for an extension.

I ask unanimous consent to place in the RECORD at this point a list of the offices and storerooms, and what have you, that will be provided for if the restoration is made. That data is included on pages 522 and 523 of the hearings. It will indicate the 115 offices I spoke about earlier.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Detail of rooms, areas, and facilities by floors

Subbasement:	
Visitors' auditorium (400 seats each)	2
Information and exhibition lobby	1
Storage areas	6
Service docks	2
Public lobby	1
Mechanical equipment rooms	2
Service elevators	4
Stairs	7
Escalator	1
Basement:	
Cafeterias (300 seats each)	2
Foyers	2
Dining rooms (270 seats each side)	2
Kitchens (with pantry)	2
Storage rooms	2
Offices	10
Mechanical equipment rooms	2
Women's toilets	2
Men's toilets	2
Passenger elevators	4
Service elevators	4
Stairs	2
Private dining rooms	2
First floor:	
Committee room	1
Conference room	1
Offices	25
Stairs	2
Storage rooms	6
Women's toilets	2
Men's toilets	2
Private toilets	7
Passenger elevators	4
Service elevators	2
Principal floor:	
Subcommitte room	1
Offices	27
Storage room	1
Women's toilets	2
Men's toilets	2
Private toilets	12
Passenger elevators	4
Service elevators	2
Stairs	2
Gallery floor:	
Subcommittee room	1
Joint conference room	1
Offices	27
Women's toilets	2
Men's toilets	2
Private toilets	2
Passenger elevators	4
Service elevators	2
Stairs	2
Document room	1
Attic floor:	
Document room	1
Offices	26
Mechanical equipment rooms	3
Women's toilets	2
Men's toilets	2
Storage rooms	2
Passenger elevators	2
Service elevators	2
Stairs	2
Electrical machine rooms	2

Mr. ELLENDER. As was stated during the debate, we are soon going to spend from $20 to $40 million to restore Union Station, just a few blocks from here. Many facilities will be provided that will be attractive to tourists who come to see the Capital. In that structure we will be able to provide for large restaurant space. I daresay that the restaurant space will be used in such manner that the Government will not have to subsidize any part of it.

Mr. President, I repeat, if we build this structure, as will be done if we provide money for the drawing of plans and specifications, the subsidy now being paid to operate restaurants in the New and Old Senate Office Buildings and the Capitol will be increased by $250,000 to $300,000, added to the $497,000 subsidy we are now providing to maintain those restaurants.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. WILLIAMS of Delaware. Does the Senator not agree that if we carry out the expansion program and create all the additional rooms and facilities it will be only a matter of time before we have a request for added personnel and staffs to fill the space?

Mr. ELLENDER. That is what I said before. More office space begets more people. There is no doubt about it.

As was pointed out awhile ago, if Senators will look at page 16 of the committees report, they will find we are providing money to purchase more land to construct a third new Senate office building.

This expansion has been going on for quite some time, without good reason. I propose to show that in a few minutes, after we take the vote on the pending amendment. It is my hope to offer an amendment to cut some of the funds that were provided by the committee for additional employees for each Senator.

Mr. WILLIAMS of Delaware. I thank the Senator. I agree with him fully. I know each year he has been waging quite a fight, and I have joined him in it, in trying to cut back the number of subcommittees. We add more and more of them over the years. It seems there is nothing more permanent here than a temporary subcommittee or committee of any kind.

In my 23 years' experience, I have never yet seen one of them disbanded, but instead we create new ones, over and over. I think if we could cut back on some of the subcommittees, we could have a more efficient operation. If we could reduce the size of the staffs, in addition to the cost that would be saved, the Government could operate more efficiently.

Mr. ELLENDER. The Senator has mentioned additional employees. When Congress passed the Reorganization Act of 1946, that act provided for 15 standing committees, and each standing committee was to have six clerical and four specialist employees, making a total of 150 employees for the committees.

But today the number of such employees has increased from the 150 to 685, and if we provide the additional $24,000 for each Senator, we will add to the total number in the Senate from 100 to as many as 150 new employees, employed by the Senators, which will make necessary the construction of a new Senate office building. I do not think that is necessary.

Mr. WILLIAMS of Delaware. I agree with the Senator.

Mr. JORDAN of North Carolina. Mr. President, I should like to make just one observation about the matter of extending the west front. In my opinion, it is unfair to stand on the floor of the Senate and state that the Architect of the Capitol does this, that, or the other thing just on his own initiative, because that is not a fact. We have a West Front Building Commission, which is composed of the Vice President of the United States, the Speaker of the House of Representatives, the minority leader of the House of Representatives, and the minority leader of the Senate—who was, of course, Mr. Dirksen at the time the Commission considered the latest proposal.

Those are people with some responsibility, and they are responsible citizens. I am certain they did not permit the Architect to go out and hire anybody without reason, and that there was no one hired without their knowing about it and concurring in it. I think that should be made clear, when it is said that George Stewart went out and did this or that, and spent so much money. Though I am not a member of the Commission, I know that is not the fact.

Within the last month or two, the Commission has been enlarged to include the majority leader of the Senate and the majority leader of the House of Representatives, making it a seven-member Commission. The two additional members did not have anything to do with the proposal for expansion now under consideration, as it came up before they were added; but that is now the Building Commission on the west front of the Capitol.

I felt that ought to be made plain.

Mr. HOLLINGS. Mr. President, I support the amendment offered by Senators CASE, PROXMIRE, and KENNEDY to strike out the $1.75 million included in the legislative appropriations bill for the extension of the west front of the Capitol. The amendment would not affect funds for a study regarding restoration. I sincerely feel this is the proper approach to this problem since we are all mindful of the present condition of the west front of the Capitol.

Only with adequate information can we intelligently act upon the alternatives. I believe it is encumbent upon this body to proceed on the expenditure of any public funds only when we have all the facts before us. The proposed amendment would permit us to consider the alternatives on a factual basis as opposed to a speculative basis.

The PRESIDING OFFICER. The question is on agreeing to the amendment (No. 251) of the Senator from Wisconsin. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. BIBLE), the Senator from Mississippi (Mr. EASTLAND), the Senator from North Carolina (Mr. ERVIN), the Senator

from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Iowa (Mr. HUGHES), the Senator from Minnesota (Mr. MCCARTHY), and the Senator from Utah (Mr. MOSS), are necessarily absent.

I also announce that the Senator from Nevada (Mr. CANNON), the Senator from Missouri (Mr. EAGLETON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Rhode Island (Mr. PELL), the Senator from Alabama (Mr. SPARKMAN), and the Senator from Virginia (Mr. SPONG), are absent on official business.

I further announce that, if present and voting, the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. CANNON), the Senator from Virginia (Mr. SPONG), the Senator from Massachusetts (Mr. KENNEDY), and the Senator from Oklahoma (Mr. HARRIS), would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Massachusetts (Mr. BROOKE) and the Senator from South Dakota (Mr. MUNDT) are necessarily absent.

The Senator from Kentucky (Mr. COOPER), the Senator from Florida (Mr. GURNEY), the Senator from New York (Mr. JAVITS), the Senator from Illinois (Mr. PERCY), the Senator from Alaska (Mr. STEVENS) and the Senator from South Carolina (Mr. THURMOND) are absent on official business.

If present and voting, the Senator from Massachusetts (Mr. BROOKE) and the Senator from Kentucky (Mr. COOPER) would each vote "yea."

On this vote, the Senator from Illinois (Mr. PERCY) is paired with the Senator from South Carolina (Mr. THURMOND). If present and voting, the Senator from Illinois would vote "yea" and the Senator from South Carolina would vote "nay."

The result was announced—yeas 53, nays 24, as follows:

[No. 127 Leg.]

YEAS—53

Allen	Hartke	Packwood
Anderson	Holland	Pastore
Burdick	Hollings	Pearson
Byrd, Va.	Inouye	Proxmire
Byrd, W. Va.	Jackson	Randolph
Case	Jordan, Idaho	Ribicoff

NOT VOTING—23

Bayh	Gravel	Mundt
Bible	Gurney	Pell
Brooke	Harris	Sparkman
Cannon	Hughes	Spong
Cooper	Javits	Stevens
Eagleton	Kennedy	Thurmond
Eastland	McCarthy	Percy
Ervin	Moss	

So Mr. PROXMIRE's amendment (No. 251) was agreed to.

Mr. ELLENDER. Mr. President, I move to reconsider the vote by which the amendment was adopted.

Mr. HOLLAND. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. ELLENDER. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 5, at the beginning of line 13, strike out "$24,656,608" and in lieu thereof insert "$23,266,792"; and, in line 17, after the word "inhabitants", strike out the colon and the following language:

"*Provided further,* That, effective November 1, 1969, paragraph (1) of section 105(d) of the Legislative Branch Appropriation Act, 1968, as amended (2 U.S.C. 61–1(d)), is amended by increasing each of the amounts in the table therein relating to Senators' clerk hire allowances by $23,652, and paragraph (2)(i) of such section is amended to read as follows: '(i) the salary of two employees may be fixed at gross rates of not more than $23,652 per annum,' ".

Mr. ELLENDER. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. ELLENDER. Mr. President, I wish to advise the Senate that it will not take very long to explain this amendment, and I hope we can get a vote within the next 10 minutes.

Mr. BYRD of West Virginia. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. ELLENDER. Mr. President, there have been three recent increases in senatorial clerk hire allowances, which does not include the one we are now considering.

In fiscal year 1965, the Legislative Appropriations Act provided States with population in excess of 17 million an increase in the annual clerk-hire funds of $6,000 basic or $15,190 gross. These States were California and New York. States in excess of 10 million were given an annual increase of $3,000 basic or $7,595 gross.

In fiscal year 1967, the Legislative Appropriations Act provided States with population in excess of 10 million an additional annual clerk-hire allowance of $6,000 on the basic scale. This $6,000 basic amounted to $17,950 gross per annum by fiscal 1967. In the same act, States with more than 3 million but less than 10 million in population were given a $4,020 basic increase which amounted to $12,020 gross. States with a population of less than 3 million were provided an increase of $2,040 basic or $6,100 gross.

In fiscal year 1968, the Legislative Appropriations Act was amended on the Senate floor to grant each Senator an increase in annual clerk-hire funds of $23,400 gross. The so-called basic rate was done away with between fiscal 1967 and fiscal 1968. As a result of the Tydings amendment and the most recent pay raise, each Senator is currently authorized to employ the following employees in the category "top paid personnel": One at not to exceed $31,317; two at $30,003; one at $28,689; one at $23,652; and remainder at $17,520.

A Senator from a State with less than 3 million population, after the July 1, 1969, pay raise is currently authorized to spend $239,805 in personnel staff allowance. This amount increases with the population scale. States with more than 10 million but less than 11 million population, for instance, have an allowance of $324,120. At the top, those States with more than 17 million have a fund of $401,865.

The legislative appropriations bill now before the Senate contains a committee amendment increasing the clerk-hire allowance of each Senator by $23,652.

The argument is now being made that some of the larger States need more additional help. Under existing law, more help is given to Senators with large constituencies. In the pending bill we have provided Senators from a few States that have large populations with more assistance. As I indicated earlier, 52 Senators receive $239,805 if the population of their States is under 3 million. Sixteen Senators from States whose population is above 3 million receive $255,185 per year to operate their offices. I am not going to recite all the amounts that are given to Senators from larger States; but Senators from four States with a population in excess of 17 million obtain $401,863 per year to operate their offices.

I mentioned these figures previously, and I ask unanimous consent that a table showing the computation, be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Section 2. The table contained in section 105(d)(1) of the Legislative Branch Appropriation Act of 1968, as amended, shall be deemed on and after July 1, 1969, to read as follows:

	Number of participating Senators
$239,805 if the population of his State is less than 3,000,000	52
$255,135 if such population of is 3,000,000 but less than 4,000,000	16
$268,275 if such population is 4,000,000 but less than 5,000,000	8
$280,320 if such population is 5,000,000 but less than 7,000,000	8
$293,460 if such population is 7,000,000 but less than 9,000,000	4
$308,790 if such population is 9,000,000 but less than 10,000,000	0
$324,120 if such population is 10,000,000 but less than 11,000,000	2
$339,450 if such population is 11,000,000 but less than 12,000,000	6
$354,780 if such population is 12,000,000 but less than 13,000,000	0
$370,110 if such population is 13,000,000 but less than 15,000,000	0
$385,440 if such population is 15,000,000 but less than 17,000,000	0
$401,865 if such population is 17,000,000 or more	4

Mr. ELLENDER. Mr. President, if the Senate votes in favor of the pending bill, it will mean that each Senator will be able to employ an additional employee whose salary will be $23,000 and some

odd. He can also use the same fund, if he wishes, to provide two or three employees instead of one.

So that if this amendment is not adopted, I venture to say that the 100 more employees provided for may be multiplied by a factor of two or three.

There is a provision in the pending bill for the construction of a new Senate office building or an extension of one we now have. There is a provision to purchase more land in case we need more space for housing the additional clerks and assistants to each Senator.

Mr. President, I ask unanimous consent that an excerpt beginning on page 15 of the committee report be included in the RECORD at this point.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXTENSION OF ADDITIONAL SENATE OFFICE BUILDING SITE

The estimate of $1,250,000, submitted at the direction of the Committee on Rules and Administration, provides funds for the acquisition of all real property in the east half of square 725, with the exception of property on which the Belmont House, now classified as a national historic building, is located. A total of 44,644 square feet is to be acquired, either by purchase, condemnation, or in the case of the alleys, totaling 13,000 square feet, by transfer without reimbursement from the jurisdiction of the District government to the jurisdiction of the Architect of the Capitol. The language also provides for demolition and removal of the buildings or other structures to be acquired and, pending demolition, for immediate use by the Government or lease in lieu thereof. In view of rapidly rising land costs in the area and the urgent need for the site for future construction of an extension to the New Senate Office Building, the committee believes the property should be obtained as expeditiously as possible.

There is a desperate need for additional workspace for senatorial offices and committee staffs. In a survey by the Public Works Subcommittee on Buildings and Grounds, 72 Senators and 24 committees and subcommittees attested to this need. Although construction plans for new quarters are not provided in this appropriation, it is estimated that by building an enclosed bridge between the New Senate Office Building and the Capitol Hill apartments, at a cost of approximately $27,000, additional space would be made available immediately at very little expense. Several subcommittees have indicated interest in the prospect.

It is the recommendation of the committee, therefore, that the sum of $1,250,000 be provided for the purpose of acquiring the land at this time.

Authorizing legislation for the extension of the Senate Office Building site passed the Senate October 8, 1969.

Mr. ELLENDER. Mr. President, in addition to the $23,652 provided for each Senator, we have additional assistants and clerks for the minority leader, the majority leader, and various other departments or offices, such as the Sergeant at Arms.

To give an idea of what we have been doing since 1961, the entire number of Senate employees in 1961 was 2,692. Seven years later, we have provided for the employment of 3,624 people. That means an addition of over 1,000 employees in the last 7 years.

Mr. President, I ask unanimous consent that the table I have prepared, showing the increase in the number of Senate employees since 1961 be included in the RECORD at this point. It should be borne in mind that these are all legislative employees, and do not include increases in the force of such offices as the Architect of the Capitol.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Average monthly employment by calendar year, U.S. Senate, 1961–68

Year:	Number
1961	2,692
1962	2,806
1963	2,937
1964	3,029
1965	3,144
1966	3,251
1967	3,504
1968	3,624

Mr. ELLENDER. Mr. President, it is my belief that if we continue to provide the money in order to get more assistants, to get more employees on Capitol Hill, we will obviously soon need additional space. I hope Senators will not provide for this additional number.

As I pointed out some time ago, I think that the largest States are amply provided for as to the other States, in the last 3 or 4 years we have provided for more and more assistance for Senators. It is my belief that the amount we are now providing is simply out of order, particularly when we are trying to save a few dollars for taxpayers.

If this provision in the bill is agreed to it will add in excess of $2.3 million to the payroll of the Senate. I am very hopeful that the Senate will agree to the pending amendment.

Mr. MONTOYA. Mr. President, I fully appreciate the remarks of my good friend from Louisiana on this particular point.

I must say to the entire Senate that perhaps the bill is a very difficult bill to present to this body. However, I have to discharge my responsibility as the chairman of the subcommittee and I gladly do so.

Every dollar in the bill has been placed in the bill after conscientious study, through exhaustive hearings, and after giving proper consideration to all the evidence that was adduced and all the justifications presented.

It is nice to make a speech about economy, but it is also realistic to face reality. By reality I mean to face what other Senators need in order to conduct their offices efficiently as Senators of the United States.

We came to the conclusion to add $23,652 for clerk hire for each Senator, not because of a perfunctory consideration but after considerable study and probing. Senator Hayden started this study before he left office. He wrote a letter to each Senator asking different pointed questions with respect to clerk hire, stationery allowances, air mail, employees' mileage, transportation of Senators, office rent in the State, office expense in the State, telephone calls outside of Washington, long-distance telephone calls, telegrams, communication reimbursement, mechanical equipment, rules and regulations pertaining thereto, and paper allotment.

When I became chairman of the subcommittee after Senator Hayden had left, I directed a letter to those Senators who had not responded to Senator Hayden's letter because I wanted a tabulation of what Senators felt in this regard. Then, after we tabulated the responses in the different categories I called a meeting with the chairman of the Select Committee on Standards and Conduct and the chairman of the Committee on Rules and Administration. After the meeting began we brought in the staff members of the three committees. The staff members of the three committees had collaborated in trying to evaluate the different requests by Senators and had conducted an independent study of what Senators actually needed. So the staff made certain recommendations to us when we met.

It was at that point that we disallowed some of the staff recommendations and allowed others. This was one. This request carried a unanimous recommendation of the chairman of the Committee on Standards and Conduct, the chairman of the Committee on Rules and Administration, and myself as chairman of the subcommittee.

In all fairness, I might add there were 40 responses and out of the 40 responses only two responded that they had a sufficient staff.

There is also one other thing I must bring up by way of sustaining my position. Many Senators do not use all of their clerk hire allowance and this money reverts to the Treasury. I stated before that I had had a compilation or computation of the dollars that I had turned back on clerk hire allowance since I have been in Congress and it approximated $300,000. I am sure other Senators do likewise.

The point at issue is that many Senators need this clerk allowance in order to conduct their offices efficiently.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. MURPHY. Mr. President, I would like to point out that in the State of California we now have 20 million people.

I think there are some States where, if one were to compute and prorate the amount of money spent for clerk hire for service to the States—and I can think of one State that shall remain nameless—we actually get one-tenth of what they get.

The State of California has grown tremendously in the few years that I have been a Member of this body. There are other States where the population has not expanded at the same rate.

I assure my distinguished colleagues that I not only could use one more employee but I could find a full day's work for five more. However, I could not accommodate them because the offices I occupy were allocated on the basis of perhaps 12 million people and the workload is tremendous. I am sure the same is true of my colleague from California.

I know it is difficult for the committee to say that every Senator should have more help or to find a formula under which those who need more employees get them, but I would like to say to Senators that as far as my State is concerned, this provision is badly needed. I am quite certain that the extra amount of money

suggested by the committee will be put to excellent work not in lightening the load of those now on the staff but in making it possible for my colleague, Mr. CRANSTON, and me to provide more service, a fuller service, and actually to do the job that we would do. It is unbelievable. I heard that President Nixon said to ex-President Johnson, "No one can explain being President until you have been President." I should like to say that no one can really explain being a Senator from California until you have been a Senator from California and realize what happens, the demands, and the problems. Every problem that exists in the entire country exists in California. This will be most welcome. I think my distinguished colleague realizes that I am not one that is used to spending money unnecessarily. If there is anyone in this body that has a greater appreciation for the value of the taxpayer's dollar, I would tip my hat to him. It is my chief concern. But in this particular matter, with regard to my State, it will be of great help and is badly needed.

It pains me to disagree with my dear friend from Louisiana but in California we really need it and we can put it to good use.

Mr. ELLENDER. Mr. President, as I pointed out awhile ago, the smaller States, 26 of them, get better than $200,000 in order to operate each senatorial office, whereas the Senator from California gets $401,000. Those figures have been fixed by law. If the Senator from California needs more assistance, let the amount be based on population and not passed on to the smaller States or to other States that do not have a similar need. I think that the method devised by Congress has worked very well and, as will be shown by the table I introduced for the RECORD awhile ago. We start with the States with 3 million or under, and those Senators are provided an allowance of $240,000. Then we go on to the next population category, and they get more money, and so on down the line.

When it comes to California, with more than 17 million population, we have provided, as I have said, almost double what the smaller States obtain.

Since Congress has gone on record as providing more funds for larger States, I think that would be the best way to continue. Increases should not be passed on to every State. This will mean an expenditure, as I pointed out awhile ago, of $2.25 million per year, to satisfy a few large States.

It is argued that it is up to the Senator to use the money, if he wants it or not, but I think that is a bad way to proceed. There is temptation there from constituents who say, "You have got all that money. Why don't you put me on your payroll?" I have been approached that way in the past, and I have resisted the temptation.

In another area, I know that each summer here quite a few students are put on the payroll at Government expense. With all the money made available to each Senator, it is my belief that the method we now have of providing more funds for the larger States is the better one. There is no good reason to provide for the larger States the added sum of $23,400 and then make it apply to all States.

Mr. STENNIS. Mr. President, I understand that the Senator from Utah wants the floor. Does the Senator from New Mexico hold the floor?

Mr. MONTOYA. I relinquished the floor.

Mr. BENNETT. Mr. President, I appreciate the courtesy of my good friend from Mississippi. What I am about to say was prepared with the thought that this might have come up yesterday, in the absence of the Senator from Mississippi, who is the chairman of the Select Committee on Standards and Conduct, and I am its vice chairman.

I had time to prepare this statement. The Senator from Mississippi just got in this afternoon and did not have that time and, thus, I am speaking on his behalf and for the other members of the committee.

I am pleased to declare our support for the increases in senatorial allowances that are included in the bill.

As the report on the bill indicates, our committee participated in the study and review of the suggested allowances and of the various suggestions for changes. The final recommendations for adjustments in the allowances impressed us as quite reasonable and received our unanimous agreement.

Mr. President, a sizable number of Senators made a persuasive argument of their need for increased allowances for the effective operation of their offices. Although not all of us suffer because of insufficient office allowances, we are sympathetic to their plight. But our committee supports the recommendations of the Appropriations Committee for an additional reason. It has been our hope that the day would come, and soon, when the Senate will provide the funding for all of the functions which any Senator must carry out. Under those conditions, we believe that it then will not be necessary for a Senator to accept any contributions from outside sources for any purposes other than the financing of his own campaign for reelection to the Senate.

We hope that the proposed increases in allowances will go a long way to achieve this goal. It will be incumbent upon our committee, if these adjustments in allowances are approved, to reexamine the provisions of Senate Rule 42 which permit a Senator to accept a contribution to defray the excessive expenses of his office.

Mr. President, a system of funding a Senate office by outside contributions is obviously fraught with danger. The Committee on Standards and Conduct commends the Appropriations Committee for beginning to move to place such funding where it belongs—upon the Government of the United States.

Now, Mr. President, a number of our colleagues, even within the past year, have indicated that the allowances they receive as Senators are not adequate to enable them to carry out their responsibilities and have accepted contributions. Under pressure from news media and other sources, they have retreated from that position and are presumably back to the responsibility of carrying the costs out of their own pockets. In some cases this may be very difficult and may make service in the Senate very arduous.

Thus, the point of view of those of us on the Committee on Standards and Conduct is that we support a reasonable, effective arrangement, or proposal, to increase allowances to the point, if not immediately, then some time in the future, when every Member of this body can serve their constituents without having to dip into their own pockets or having to go to their friends and ask for help for that purpose.

Mr. CASE. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. CASE. I want to express appreciation to the committee, to the chairman, and to the ranking minority member for a very sound, wise, and courageous position that they have announced.

I opposed the fund—whatever it is called in the rules—when it was set up, although I recognized the need for some way of taking care of it. This is the right way to do it. I am so glad that the committee is lending its great prestige to the effort which the legislative subcommittee has made in this direction.

Mr. STENNIS. Mr. President, I shall not detain the Senate except for a very few minutes, but I want to reiterate what the Senator from Utah has said. I do not want to go over the debate again, and I am not alluding to any individual, but we brought in a proposed rule which, even though it permitted contributions, spelled out that a Senator may use the contributions only to influence his nomination for election or his election. It stated, further, that he shall not use, directly or indirectly, any part of any contribution for any other purpose.

That was thought to have been so severe that many exceptions were added on the floor. I do not complain about that; I just state it as a fact.

Nevertheless, it stated that:

> Nothing in this rule shall preclude the use of contributions—

That means money somebody else gave, not a direct campaign contribution, but put in his hands—

> to defray expenses for travel to and from each Senator's home State; for printing and other expenses in connection with the mailing of speeches, newsletters, and reports to a Senator's constituents; for expenses of radio, television, and news media methods of reporting to a Senator's constituents; for telephone, telegraph, postage, and stationery expenses in excess of allowance; and for newspaper subscriptions from his home State.

Our committee recommended these changes in a Senator's allowance as a prelude for asking the Senate to repeal this part of the rule that was put in on the floor. I am not complaining, but we still think it ought to be that anything that is put in the hands of a Senator in the way of money can be used only for those purposes, and that the cost of running an office ought to be something the Government pays for, and that no kind of reason can be given along that line as an excuse for taking money.

I hope the whole package can prevail. I am not going to suffer as a result of

this clerk allowance. Most of the time I have less than my allowance. I state this as something that does happen to a Senator: Since I became chairman of the Armed Services Committee, I have been running short, frankly, because of the increased volume of work. I know other Senators have had the same experience. My State is in the lower classification of population. I will get along. There will not be any contributions, at least. I know I have had to add two telephone lines to my office already. Many times when the phone rings, they are all busy.

I am not talking about myself. I will get along. A Senator must have an office in his State now. If one Senator from a State has an office, the other Senator had better have one. That is expensive. I have two good employees, and they are busy all the time, in Jackson, Miss. Senator EASTLAND has the same.

No two States have the same kind of constituent demands. I am willing to take the word of the chairman.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. FULBRIGHT. I agree with the Senator in everything he has said about this whole problem. One thing that bothers me is that we are struggling with our overall obligations in the Government, and the budgetary situation, and the tax situation. This troubles me a great deal. I know there are other States which are larger than mine, and perhaps there are greater pressures from within those States than from within mine. However, I am very hesitant to vote for this increase at this time solely because of the feeling of pressure on me and the whole Congress to try to cut down on expenditures.

I read in the newspapers—and this is in the area of the armed services—that the Defense Department is making a very strenuous effort to cut down its budget, in an effort to help the President balance the budget, and in order to achieve a decrease in the inflationary pressures. It is the symbol of our attitude that bothers me more than the actual clerk hire. It bothers me very much.

The Senator from Louisiana (Mr. ELLENDER) has been a leader in this field. I feel that I would be remiss in not at least making this small gesture of foregoing this matter until we get over the inflationary pressures, and I hope the war, and reestablish a balance in our economy.

Mr. STENNIS. It is the people's business we are taking care of, not our own business.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. ELLENDER. Has not the work of the Senator from Mississippi increased because he is chairman of the Armed Services Committee, and has not the work of the Senator from Arkansas increased because he has been holding hearings? That generates publicity, and is bound to make more work. I do not question that. But the subcommittees are well provided with funds to take care of their official business. It strikes me that when a Senator is head of a committee or subcommittee, he hears more from the public because of the action taken by him or the subcommittee. That is one of the reasons why in the past I have opposed the creation of so many subcommittees. I know any time a Senator makes a speech on a certain proposal, his correspondence increases overnight, and then it will slack off.

From my own experience of almost 33 years, my mail increases depending on something that is brought out by some of the subcommittees on which I serve. I am sure that is true of others.

It strikes me that with all the subcommittees we have now, the 500 additional clerks who serve on the subcommittees could certainly be used by the Senator from Mississippi, as well as the Senator from Arkansas to provide help in answering such mail as may be sent to them because of the hearings held by the various committees.

Mr. STENNIS. I have done all I can to get the mail sent out. I do not use my staff members to do my work. My people in Mississippi will not be brushed off when they write me or call me and want things done. I am up against it, but I will get by.

Mr. ELLENDER. But many letters come from outside the State of Mississippi. I know that is the Senator's experience.

Mr. STENNIS. Constituents from the various States vary greatly about the things they want a Member of Congress to do. I have a pile of papers right now that were given to me as I left a speaking engagement at Jackson, Miss. They are going to get attention one way or another.

Mr. ELLENDER. Mr. President, will the Senator yield further?

Mr. STENNIS. I yield.

Mr. ELLENDER. I wanted to say that, as chairman of the Committee on Agriculture and Forestry, any mail from outside of Louisiana I get pertaining to agriculture I send to the committee.

I have a staff of only seven clerks, but they attend to all of that for me. I believe that Senators who have subcommittees could easily do the same thing, and do away with a lot of office work that arises because of the fact that they serve on the subcommittees.

Mr. STENNIS. We are all busy at my office until 6 or 7 o'clock. Four of the girls stay there.

Mr. JORDAN of North Carolina. Mr. President, I do not intend to take more than a minute of the Senate's time, because it is getting late. I simply wish to make this statement: I met with the Senator from Mississippi (Mr. STENNIS), who is chairman of the Ethics Committee, and the Senator from New Mexico (Mr. MONTOYA), the chairman of the Committee on Appropriations, and the staff, to go over the answers they received to letters and questions they sent out asking about the needs of Senators. The reason I came into the picture was because I am chairman of the Committee on Rules and Administration, and I receive a lot of calls asking for additional space, and so on.

I realize that some Senators do not use all their appropriations. I do not use mine, and I do not use any of the members of the Rules Committee staff on my staff, either. My own staff does the work I am supposed to do in my office.

However, I know there are a good many Senators whose staffs simply cannot turn out the work they have to do. For that reason, I support the bill in the form in which it was reported, because, as I think the Senator from Mississippi brought out very forcefully, the needs of the Ethics Committee in accomplishing the work they have in mind, illustrate needs we have right now, and therefore I support the bill as reported.

Mr. COTTON. Mr. President, I am a member of the subcommittee which reported this bill. I merely wish to make this observation: I am not using all of my allowance now. I think it very unlikely that I would use this additional allowance. But if Senators do not use the money, the people do not have to pay it.

Senators who represent populous States and need the additional help in order to do their work should have it. No Member of the Senate is compelled to spend one single cent on his staff that he does not feel is necessary. I happen to have enough confidence in the integrity of the Members of this body that I do not believe any Senator will use money that he does not need, simply because he has access to it.

Furthermore, if any Senator's conscience bothers him too much about the allowance that Senators have to do their work, I would suggest that he take a little journey downtown, and travel through the executive offices. I am not talking about the offices of the members of the Cabinet, but the Assistant Secretaries, the Deputy Assistant Secretaries, the Assistants to the Deputy Secretaries, and so on down the line. As you go through their offices, walking on carpets that come up to your ankles, you can see the staffs they have, which are almost unlimited in size. Perhaps they need them; I am not criticizing them.

But I have never been too patient with people on the Hill who are so alarmed about Senators having, if they need it, sufficient funds to do their work. Those who do not need it do not have to take it, and the people will not have to pay it.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Louisiana. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. BIBLE), the Senator from Mississippi (Mr. EASTLAND), the Senator from North Carolina (Mr. ERVIN), the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Iowa (Mr. HUGHES), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Montana (Mr. METCALF), the Senator from Utah (Mr. MOSS), and the Senator from Maine (Mr. MUSKIE) are necessarily absent.

I also announce that the Senator from Nevada (Mr. CANNON), the Senator from Missouri (Mr. EAGLETON), the Senator

from Massachusetts (Mr. KENNEDY), the Senator from Rhode Island (Mr. PELL), the Senator from Alabama (Mr. SPARNMAN), and the Senator from Virginia (Mr. SPONG) are absent on official business.

I further announce that, if present and voting the Senator from Nevada (Mr. CANNON) would vote "yea" and the Senator from Oklahoma (Mr. HARRIS) would vote "nay."

Mr. GRIFFIN. I announce that the Senator from Massachusetts (Mr. BROOKE) and the Senator from South Dakota (Mr. MUNDT) are necessarily absent.

The Senator from Kentucky (Mr. COOPER), the Senator from Florida (Mr. GURNEY), the Senator from New York (Mr. JAVITS), the Senator from Illinois (Mr. PERCY), the Senator from Alaska (Mr. STEVENS), and the Senator from South Carolina (Mr. THURMOND) are absent on official business.

If present and voting, the Senator from Illinois (Mr. PERCY) would vote "nay."

On this vote, the Senator from South Carolina (Mr. THURMOND) is paired with the Senator from Massachusetts (Mr. BROOKE). If present and voting, the Senator from South Carolina would vote "yea," and the Senator from Massachusetts would vote "nay."

The result was announced—yeas 26, nays 49, as follows:

[No. 128 Leg.]

YEAS—26

Allen	Fulbright	Prouty
Allott	Goldwater	Proxmire
Burdick	Gore	Smith, Maine
Byrd, Va.	Hartke	Smith, Ill.

Cannon	Javits	Sparkman
Cooper	Kennedy	Spong
Eagleton	McCarthy	Stevens
Eastland	Metcalf	Thurmond
Ervin	Moss	
Gravel	Mundt	

So Mr. ELLENDER'S amendment was rejected.

Mr. WILLIAMS of Delaware. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 11 strike out lines 3 through 23 and on page 12 strike out lines 1 through 3 and insert in lieu thereof the following: "The first sentence of the second paragraph under the heading 'Administrative Provisions' in the Legislative Branch Appropriation Act, 1962, as amended (2 U.S.C. 127), is amended to read as follows:

" 'The contingent fund of the Senate is hereafter made available for reimbursement of transportation expenses incurred in traveling by the nearest usual route between Washington, District of Columbia and any point in the home State of the Senator involved, for not to exceed eight round trips made by employees in each Senator's office in any fiscal year, such payment to be made only upon vouchers approved by the Senator containing a certification by such Senator that such travel was performed in line of official duty.' This provision shall take effect with respect to round trips commencing on or after the date of enactment of this Act."

Mr. MONTOYA. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. MONTOYA. Mr. President, I join the Senator in the sponsorship of the amendment. The Senator and I have discussed the amendment. I have in turn discussed it with members of the committee, and we are agreeable to it.

Mr. WILLIAMS of Delaware. Mr. President, I thank the Senator. I am glad to have the Senator's name added as a cosponsor.

I will take just a moment to explain the purpose of the amendment. The bill as drafted would provide reimbursement for a staff member going to the home State on eight trips at the rate of 10 cents a mile, regardless of what the cost of the trip might be.

The purpose of the amendment is merely to spell out that they could be reimbursed only for actual transportation expenditures incurred. This does not deal with the number of trips allowed but merely limits the payment to actual costs of transportation.

Without the amendment, it would be possible for a staff member going back home to actually make money on the trip over and beyond the actual expenditures incurred, because the transportation costs are less than the 10 cents per mile. This amendment would merely spell out that they must submit the voucher for the trip and be reimbursed in turn for the voucher covering the expenditures as made.

Mr. MONTOYA. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. MONTOYA. I might add, further, that the reason why the provision is in the bill is that the employee trips have been reimbursed on the basis of mileage heretofore. This would put their reimbursement equivalent to what applies to the individual Senators.

Mr. WILLIAMS of Delaware. That is correct.

With that explanation, Mr. President, I am ready to vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

The amendment was agreed to.

Mr. ELLENDER. Mr. President, I am not going to detain the Senate very long.

The amendment I proposed a short time ago was defeated and I had other amendments prepared to reduce the amounts that have been provided by the committee for various other purposes in the bill. The amount for the offices of the minority leader and of the majority leader have been raised, although I understand there is no intention on the part of the majority leader to use the amount provided. We are doubling the amount for the minority whip of the Senate so as to be able to pay one of his assistants $30,003 and the other $15,000, although the amount provided now by law is a little less than half of that.

In January, when the Senate convened, I said that I felt that to pay our Chaplain as much as $17,500 was entirely too much, and I felt that the amount should be reduced. I am glad to say that the committee did see fit to reduce the figure from $17,500 to $10,000. But what the committee did was to turn around and add authority for the employment of a secretary at the rate of $8,000 annually. So that we end up providing the Chaplain more than he is now receiving.

Mr. MONTOYA. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. MONTOYA. The reason why the committee made the provision for a secretary is that the previous Chaplain had an allowance for a secretary, not through direct appropriation but out of the administrative roll of the Senate.

Mr. ELLENDER. That was Reverend Harris.

Mr. MONTOYA. Yes.

Mr. ELLENDER. Reverend Harris had a great deal of outside work. As I recall, he wrote articles for various newspapers, and Senator Hayden made that allowance for him.

As I have said, I am not going to press this amendment, but it strikes me that we are entirely too liberal with the taxpayers' money. We have added quite a few jobs. As I pointed out earlier, we have increased the jobs in the Senate by over a thousand between 1961 and 1968, and that trend seems to continue. I sometimes wonder how we ever got along.

I am not going to press it any further, but it strikes me that the Senate ought to consider the times in which we are living, and we ought to try to set an example. Earlier, the Senator from New Hampshire (Mr. COTTON) stated that the offices downtown are getting a lot of employees whom we are providing, and that we ought to do the same thing for ourselves. I disagree with that. It strikes me that Congress ought to lead the way toward economy in Government and this would be a good place to set an example.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. MONTOYA. I ask for third reading, Mr. President.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 13763) was read the third time, and passed.

Mr. MONTOYA. Mr. President, I move

to reconsider the vote by which the bill was passed.

Mr. JORDAN of North Carolina. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MONTOYA. Mr. President, I move that the Senate insist upon its amendments, request a conference with the House of Representatives on the disagreeing votes of the two Houses thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. MONTOYA, Mr. PROXMIRE, Mr. YARBOROUGH, Mr. PEARSON, and Mr. COTTON conferees on the part of the Senate.

Mr. MANSFIELD. Mr. President, I wish to express my appreciation and the appreciation of the entire Senate to the distinguished Senator from New Mexico (Mr. MONTOYA) for the splendid manner in which this important funding measure was handled. His clear and convincing presentation, his strong advocacy, his careful preparation assured its overwhelming acceptance by the Senate. This was only characteristic. Senator MONTOYA has distinguished his entire public career with his outstanding legislative skill and ability.

The same may be said of the distinguished Senator from Kansas (Mr. PEARSON), the ranking minority member of the Legislative Appropriations Subcommittee. He cooperated to make certain that this measure received the full yet efficient consideration of the Senate. We are grateful.

We are grateful also for the views of others who joined the discussion adding their own sincere and helpful comments. Noteworthy was the outstanding contribution of the distinguished Senator from Wisconsin (Mr. PROXMIRE). The success of his amendment was based in large measure on his able and effective advocacy. The distinguished Senator from Louisiana (Mr. ELLENDER) also is to be commended. His views are always most welcome as are those of the distinguished Senator from Delaware (Mr. WILLIAMS).

Finally, the Senate may be pleased today with its action in disposing of another of the all important funding measures. There are others to be considered and I would hope that the entire appropriations process will be completed at the earliest possible time.

ORDER FOR ADJOURNMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business this evening, it stand in adjournment until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXPORT EXPANSION AND REGULATION ACT OF 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 329, S. 2696. I do this so that the bill will become the pending business.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 2696) to provide for continuation of authority for the regulation and expansion of exports, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

LEGISLATIVE PROGRAM

Mr. SCOTT. Mr. President, will the Senator from Montana yield, so that I may inquire as to the future business for this week?

Mr. MANSFIELD. Mr. President, may I say that it is with a great deal of personal reluctance that I call up S. 2696 at this time. However, because of the bareness of the calendar, I really do not have much choice, and I never want this Congress to be accused of being a foot-dragging Congress.

After we dispose of this bill, which may well go into Thursday, it is the intention to take up the veterans education bill, which was reported by the Committee on Labor and Public Welfare today.

That is about as much as I can say at the moment.

Mr. SCOTT. If the Senator will yield further, aside from commenting—I do not know of any three words I have ever used that got so much action, and I am very pleased that the Senate is engaged in a considerable flurry of activity—the distinguished majority leader knows that I inquired of him as to whether or not some other bill could be substituted for this, simply because there are Senators on both sides who may not find it possible to be here tomorrow. But I understand that the reason for laying down this bill is that there does not appear to be another bill which could be substituted, and we had this discussion so that this might be brought out.

Mr. MANSFIELD. Mr. President, the distinguished minority leader almost broke my right arm, the distinguished assistant minority leader almost broke my left arm, various Senators from Utah, Texas, and other places almost broke my back, but I do not have much choice.

Mr. SCOTT. I think the junior Senator from Maine is also absent.

Mr. MANSFIELD. He had his arm around my neck, as well as the Senator from Minnesota and a few others.

OEO LEGAL SERVICES PROGRAM

Mr. MURPHY. Mr. President, on last Tuesday a situation occurred in the Senate that confused some of my colleagues, amazed others, startled me, may I say, and I rise at this point to try to put the RECORD straight and eliminate confusion as far as I am able to do so. I also wish to thank some of my colleagues for their defense of me and my position after I had left the Chamber.

Mr. President, you may recall that last Tuesday S. 3061 was suddenly and unexpectedly laid before the Senate as the order of business. I had suggested that the bill be put over to give me and other Senators on the minority side the time to properly prepare some amendments. However, for some reason the bill was laid before the Senate very quickly and at the moment I was not prepared. We did the best we could to accommodate the acting majority leader in his determination to bring the bill before the Senate.

I had pointed out that I had long standing commitments in California that I just could not break, and which made it impossible for me to remain in the Chamber through the full session on Tuesday. I explained that as well as I could, and I explained that I had tried to have prepared two amendments that I wanted to introduce that had not been completed because we had not had the warning time. I do not think the situation was healthy, proper, or sound.

One amendment had to do with the legal service program in the bill, S. 3061. I thought I had explained it carefully. I understood the legal service program to mean actually what the term implies, that is, to provide a lawyer and legal services for a poor man who could not afford them. I said that somewhere along the line the provision for legal services had become legal reform and that all sorts of things were going on not only in my State but also in many other States, and that my amendment would have permitted two things. It would have restored the Governors' veto over this particular function without the OEO Director's override. Also, it would have provided the Governors with permission to veto line items. In the past there has been a habit of jumping the entire OEO program together and although one may object to only one or two items, the entire program would have to be vetoed. This did not seem to be practical and did not seem to be producing the desired results. So my amendment was introduced to accomplish two things.

I would like the RECORD to show that in the beginning, when the OEO program was first started, the Governors of the separate States had an unencumbered right to veto; and, then, in the second year, 1965, the right of the Governors to veto was significantly weakened, because the Director was given the power to override the Governor's veto. This has caused problems.

During committee hearings I said on several occasions that I would attempt to introduce an amendment that would clarify the original intent of the legal service program, which was simply to provide a lawyer for some poor guy who did not have enough money to hire a lawyer, and that if it was the feeling of the committee that taxpayers' money should be used for the purpose of legal reform, we should hold hearings and come to a decision, and perhaps bring it before this body. Certainly, in my opinion and in my judgment it was not proper to substitute legal reform for what started out to be legal services.

Tuesday my amendment was brought up. There was a rollcall vote and my amendment was agreed to by a vote of 45 to 40. At that point I was forced to leave the Chamber to keep my appointments in my State of California.

After I left the Chamber there was a

discussion, and another amendment was brought up which would amend or emasculate it, really, by placing the power to override the Governor's veto in the hands of the President.

I was amazed that this amendment should be brought up at a time when I was out of the Chamber. Second, I thought it unusual that, having had a rollcall vote and the will and the desire of the Senate having been recorded, that this matter should be taken up again. Certainly, I would think that propriety would have made restraint applicable so that consideration might be at a time when it would be possible for me to be in the Chamber.

I notice from the RECORD that my distinguished colleague from New York (Mr. JAVITS) said on three or four occasions that he was embarrassed by the procedure. I do not want him to be embarrassed. I appreciate his thoughtfulness in my behalf, but I do not think he should have been embarrassed.

Then, one of my other colleagues said that 10 days had passed since we voted to report the bill to the Senate and that it was not as though the Senator from California was not a member of the committee.

My distinguished colleague knew I was not only a member of the committee, but that I was an active member. I worked quite conscientiously, as I have ever since I have been a Member of the Senate, on the legal services program, a program designed to help the poor.

I have never disagreed with its objectives but I have often disagreed with the manner and the implementation. I believe one of my first efforts in this body was to try to get the politics out of the program for the poor and to see that the taxpayers' money went directly to the poor people who needed help.

At that point, Mr. President, I particularly want to thank three of my colleagues. I wish to thank the Senator from Florida (Mr. HOLLAND), the Senator from Alabama (Mr. ALLEN), who is now presiding in the Senate, and the Senator from Colorado (Mr. ALLOTT) for speaking in my behalf when I was not here.

Later the statement was made that I had answered at one point that I was unclear with regard to the amendment in relation to the existing law. That was true. I was. At the time I was speaking, the amendment had just been written and submitted. I am not a lawyer. It had just been put in proper language, to be made part of the bill, and in form to be properly presented to the Senate for consideration. I say it was considered. It did pass. I thought that that would be the end of it. There is good reason for the amendment. We find that the legal services, in my State, and in several other States that I know about, set out on a program of legal reform and, in many cases, such reform in this manner is not popular with the majority of my constituents. But they have to pay. They have to pay the cost of bringing the action and then, if they want to object to it, they are asked to pay for the defense, too.

It seems to be, really, an unheard of situation. That was the purpose of my amendment. I said several times during the presentation of the amendment that I was perfectly willing to have hearings if we want to set up an institution and program of legal reform, hold the hearings, and then bring the matter before this body and let it stand or fall on its merits.

As I say, I am most thankful to my colleagues, the Senator from Alabama (Mr. ALLEN), the Senator from Florida (Mr. HOLLAND), and the Senator from Colorado (Mr. ALLOTT) for protecting my rights and being most helpful and thoughtful of my purpose and my desire along with the stated desire of the Senate which had passed the amendment by a vote of 45 to 40.

I should like to clear up whatever confusion there may be because, as I understand it, there was finally an agreement reached by the proponents of the amendment that would have completely emasculated my amendment. As I understand, the agreement was that I would be a member of the conference and if I objected to the amendment, it would be withdrawn and my amendment left in its original form.

Technically, from the standpoint of parliamentary procedure, I do not know exactly how one does this, but I will accept the offer and I should like the RECORD to show now that I will object. As a conferee I will ask that it be withdrawn, leaving my original amendment which was presented to the Senate and which was voted on by a rollcall vote.

There is another confusion in the hurry of all this. I read the printed copy of S. 3016 carefully today, particularly the second amendment which I am discussing.

On page 14, line 12, it says:

Nothing in subsection (a) of this section shall be construed to deny the President the nondelegable authority to reconsider the plan disapproved by the governor if the President finds the plan to be fully consistent with the provisions and in furtherance of the purpose of this article.

Well now, Mr. President, I submit that again is a unique situation because, as I read section 242 of the existing law, there is no subsection (a). So I leave this question to the staff.

I would like to thank sincerely those Senators for the courtesy which they extended me by saying that if I objected to the second amendment, they would withdraw it at the time of conference by whatever proper parliamentary rules there are for such an action. I appreciate their thoughtfulness and I consider it very kindly of them. I want the RECORD to show now that as a conferee I will object.

THE RECENT VIETNAM MORATORIUM

Mr. MURPHY. Mr. President, there has been great discussion lately about the problems of the Vietnam war. Some confusion has evolved from it.

I am sure that many of the young people who marched in the so-called recent moratorium did so without a full understanding or knowledge of the conditions of the historic background of how we got into the war, what happened, and what were the circumstances that brought about this dilemma in which we find ourselves.

I was fortunate to have been given a letter by a man who served in high capacity in two administrations, both in the administration of President Eisenhower and in the administration of President Kennedy. I have his permission to read parts of the letter which are from a letter he wrote to the present President of the United States, Mr. Nixon.

I read from the second paragraph of the letter:

Having lived at close range with the decisions of South Vietnam from 1961 onward—and disagreed with many of them—I naturally feel a deeper personal concern than most men in private life, and hence I feel compelled to express my concern to you on two points.

First, I believe the public must always be made aware of the facts concerning our involvement in South Vietnam. On January 20, 1961, when President Eisenhower and you—

That was then Vice President Nixon—

left the South Vietnam problem to others, we had 800 military advisors and an equal number of foreign aid personnel located in and about Saigon. Eight years later, when you picked the problem up again, we had 550,000 men and countless civilian personnel engaged in a major military effort and doing all sorts of other things as well.

The first major decision came in the fall of 1961 when President Kennedy accepted the recommendations of General Taylor and Walter Rostow and, as a result, our military presence in South Vietnam was almost immediately increased to 15,000 "advisors". This was a step President Eisenhower refused to take as it was a contradiction of the 1954 Geneva Accord—defendable only because our intelligence told us (through means we could not disclose) that the North Vietnamese were violating the Accord by infiltration of cadres and material).

As I said to you when you visited me in our home some two years ago, "President Kennedy put the prestige of the United States on the line and we have been trying to redeem it ever since."

The successive steps in the escalation of our involvement in South Vietnam are all too familiar to you and I will not recount them now. However, I believe the public and the Congress must always be told just how the escalation took place and who was responsible. In short, Vietnam must never become "President Nixon's war". You are struggling to extricate the United States from a bad situation resulting from bad judgment and faulty decisions by President Kennedy and President Johnson and their principal advisors. Understandably, you say, "Let's not quible over how we got into Vietnam. Let's work to get out of it." This position is commendable but it seems to me, Mr. President, that too many on the Hill are trying to put Vietnam on your doorstep and hence, I believe you are justified in reminding the public both directly and indirectly just how the situation came about.

I agree that we must withdraw and this should be done as rapidly as possible. I concur in your "hope" (not a commitment) that Clifford's timetable should be anticipated. However, I am very concerned over the concept of withdrawing combat forces and leaving our air and logistic resources behind to be protected by a revitalized South Vietnam army. We went through this once and the ARVN failed us. Air fields and depots were seriously damaged by enemy bombardment, infiltration and sabotage. Therefore, 50,000 Marines were put on "static defense" and when this failed, they and hundreds of

thousands more U.S. military personnel were put on the offensive.

Withdrawing combat forces might very possibly cause a repetition of late 1964. With this apprehension in mind and strong doubts concerning the effectiveness of a revitalized South Vietnam military establishment, I suggest as an alternative that units of all types be withdrawn concurrently in a phased withdrawal so that our own combat units will be available to protect our own air and logistic resources at all times. This is a suggestion I offer to you based on my experience and observations of the disappointments of the past.

Mr. President, I shall refrain from reading the rest of the letter, because it is personal. It does not bear on the subject.

I wanted to read the letter into the RECORD at this point so that the confusion that exists about this entire dismal, discouraging situation could be brought clearly to the attention of all citizens and many of our colleagues who may have forgotten the basis of the beginning, and many of those who marched, unfortunately, not being certain as to what they would accomplish.

As I have said many times, those who marched in the moratorium, who said they marched to stop the killing, have not the slightest idea of the amount of killings and atrocities and bloodshed they will turn loose if we ever accede to the demands of the moratorium committee and pull out of there immediately. There will be a slaughter the like of which has not been seen in the world since the Madman of Berlin tried to exterminate an entire people.

And so, Mr. President, I have put this particular piece of factual history into the RECORD at this point because the man who wrote this letter has served with great honor and great distinction in public service to his Nation for many years. He is a man of complete trust and honesty and dedication.

I asked his permission to put this letter into the RECORD in the hope that my colleagues may read it and may go back over the elements of this case carefully and cautiously, and make certain that we do not permit the fires of emotion to overcome the bright light of good wisdom and knowledge in trying to make the decisions which we are trying to make with regard to Vietnam.

I know, Mr. President—and I am sure that all my colleagues will agree—that no one has the complete knowledge that is available to the President of the United States. And there is no one, I am sure, even in this Chamber, or the entire Congress, who would question for one instant the design and desire of the President to bring this unfortunate episode in history to an honorable conclusion.

So I hope that possibly this addition to the RECORD printed by the Congress may in some way keep clear and in sharp focus the actual facts, conditions, and desires of the President to bring about peace. I hope that people will not be influenced by emotional behavior led by people whose names are not generally known, whose identities are obscure, whose background and characteristics are known only to some of us who have taken the trouble, perhaps, to research their backgrounds and their reasoning, in order to find the why and the wherefore of their particular interest at the present time. It is in the hope that we will not be carried away and suggest that the President of the United States turn over these all-important decisions to some mob of people who have marched, I am sure motivated by the finest impulses, in the hope of bringing about peace and stopping the killing. And I know of one one who disagrees with that desire.

But they may do it with understanding. They may do it with full regard for the fact that this is the obligation of the elected President of the United States, and ours is to advise him in performing these obligations. It is our duty to advise and consent as he goes along, and to please not impede the progress that he is attempting to make, and that he is making, so that, at the soonest possible moment, we will come, not to a makeshift withdrawal, not to what would amount to an absolute and abject surrender of the principles and the guarantees laid down by Presidents Kennedy and Johnson, and adhered to by President Nixon, but that we may bring this entire situation to a proper conclusion—one with honor, and one, I would hope, that would encompass the suggestion of my esteemed colleague the majority leader yesterday, when he said he would hope to see a convocation of all interested free nations to guarantee the freedom of peace and the freedom of being for the nations of all of Southeast Asia, not just the unfortunate South Vietnamese who have suffered so long.

I thank the Presiding Officer for his courteous attention, and I yield the floor.

TAX REFORM ACT OF 1969—AMENDMENT

AMENDMENT NO. 252

Mr. MILLER. Mr. President, I send to the desk an amendment to H.R. 13270, the House-passed tax reform bill and ask that the amendment be printed in the RECORD, printed, and appropriately referred.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table; and, without objection, will be printed in the RECORD in accordance with the Senator's request.

The amendment is as follows:

AMENDMENT NO. 252

Beginning on page 273, strike line 7 and all thereafter down through line 17 on page 276, and insert in lieu thereof the following:

"(1) Plowback Requirement.—Section 613 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsection:

"'(e) Plowback Requirement.—

"'(1) To the extent that percentage depletion (determined under subsection (b)) exceeds the sum of cost depletion for such minerals plus qualified plowback expenditures (as defined in paragraph 3) made by the taxpayer (or by members of an affiliated group filing a consolidated return) during the current taxable year and the two succeeding taxable years, such excess percentage depletion shall be restored to taxable income in the second succeeding taxable year to the extent of the difference between the amount of such excess percentage depletion (computed according to the rate in subsection (b)) and the amount that would have been computed by substituting the following rates for those provided in the designated subparagraphs of subsection (b):

"'(1)—20 percent
"'(2)—17 percent
"'(3)—11 percent
"'(4)— 7 percent
"'(5)— 5 percent
"'(6)— 4 percent
"'(7)—11 percent

To the extent that qualified plowback expenditures during the two succeeding taxable years are taken into account in computing (or eliminating) excess percentage depletion with respect to the current taxable year, they shall not be taken into account in computing (or eliminating) excess percentage depletion with respect to any other taxable year. Where qualified plowback expenditures, applied under the above rules, are greater than the amount needed to eliminate excess percentage depletion, such excess qualified plowback expenditures may be carried over for two years and applied in the same manner as the net operating loss deduction provided for under section 172.

"'(2) The amounts to be restored to income under paragraph (1) shall be determined for all mines, wells, and other mineral deposits located within the United States and its continental shelf separately from those located without the United States and its continental shelf. For mines, wells, and other mineral deposits located without the United States and its continental shelf, the amounts to be restored to income shall be determined for all such mines, wells, and other mineral deposits located within each separate foreign country or in all foreign countries, at the election of the taxpayer (or members of an affiliated group filing a consolidated return).

"'(3) For the purposes of this subsection, the term "qualified plowback expenditures" means all costs, including fees, wages, and salaries, incurred by the taxpayer (or members of an affiliated group filing a consolidated return) in connection with exploration, acquisition, and development of mineral properties of a like or geologically-related kind to that for which the percentage depletion has been allowed, including intangible drilling and development costs, plants and facilities for drilling, mining, and producing such minerals to a readily marketable state, and research and development on methods of discovery and recovery of such minerals.'

"(2) The amendments made by this subsection shall apply to taxable years beginning on or after January 1, 1970."

Mr. MILLER. Mr. President, this amendment has to do with percentage depletion in the extractive industries. For many years, the tax law has granted owners of mineral interests a deduction against income from those interests—the deduction being known as "percentage depletion." The percentages vary according to the mineral, varying from 27½ percent in the case of oil and gas wells to 5 percent for pipe clay and gravel.

The percentage depletion is different from "cost depletion." In the case of cost depletion, the taxpayer is allowed to take deductions, based upon the rate of production from his mineral property. But when the cost is used up, that is the end of the deductions. With percentage depletion, the deductions continue on as long as there is production from the property and notwithstanding that the

taxpayer's cost has long since been recovered through these deductions.

Two major reasons are behind permitting percentage depletion to go on beyond the time when the taxpayer's cost has been recouped: The first is that it is in the nature of a "reward" to the taxpayer for risking his capital in trying to develop mineral resources. It is a high-risk type venture, and without the reward it is generally conceded that we would not have had resource development which has brought an abundance of minerals and their products to consumers at relatively low cost. The second reason is that percentage depletion is calculated to provide an incentive for the taxpayer to keep going in finding and developing resources for the ultimate benefit of the consumers and, in the case of overseas activities, our balance-of-payments position.

With this background, let me point to what the House-passed tax reform bill proposes to do. It would cut the percentage depletion rates by approximately 25 percent. I refer to this as a "meat ax" approach to the problem of abuses which have been occurring. Take two corporations, A and B. Each is in the oil business and each has $100,000 in percentage depletion deductions for a particular year. Corporation A "plows back" its $100,000 into continued exploration, drilling and development—all calculated to increase—or at least replace—oil resources for the ultimate benefit of consumers. Corporation B does not plow back anything, but takes the $100,000 and uses it for dividends to stockholders. Under the House-passed bill, both would be treated alike. I find this treatment both arbitrary and unfair, and it would certainly seem to be contrary to our national interest.

My amendment would center on the abuse and not treat both of these corporations the same way. In the case of corporation A, which plows back all of its percentage depletion, the present depletion rates would continue to apply. In the case of corporation B, which does not plow back anything, the new, reduced rates in the House-passed bill would apply. In the case of corporation A, the 27½ percent rate would continue. In the case of corporation B, the reduced rate of 20 percent would apply.

If corporation B plowed back only a portion of its percentage depletion, then it would be allowed a rate falling between the House rate of 20 percent and the present rate of 27½ percent, depending on the proportion that was plowed back.

My amendment also provides that if the plowback is less than the amount of the percentage depletion deduction for the current taxable year, the taxpayer will have the two succeeding years within which to make the plowback expenditures required to preserve the present higher percentage depletion rate. It also provides that if the plowback expenditures exceed the percentage depletion deduction, they may be carried over for the 2 succeeding years to be used in preserving the higher percentage depletion rate for those years.

Actually, my amendment represents a compromise between the two theories underlying the precentage depletion deduction. The reduced House rates would represent the reward theory. The additional amount, represented by the present rates, would represent the theory that percentage depletion is calculated to be an incentive for the taxpayer to continue to find and develop mineral resources. My amendment is directed at the area of abuse where the second theory is not being satisfied.

We have received testimony from representatives of the Treasury Department that the wholesale reduction in rates represented by the House-passed bill would result in increased costs to consumers. At a time when everyone is deeply affected by inflation, this would be a terribly inappropriate time to aggravate the situation. Let no one be lulled into thinking that the House-passed bill, if enacted, would not result in an increase in the cost of auto gas, home heating fuel, tractor fuel, construction materials, and the various products represented by the petrochemical industry. Such a result would not obtain if we center on abuses, as my amendment does, and leave those individuals and corporations, which are plowing back their percentage depletion, alone.

My amendment makes it clear that the plowback expenditures must relate to the mineral against which the percentage depletion has been allowed. The phrase "like or geologically related kind" would mean, for example, that percentage depletion on oil production could be plowed back in finding and developing natural gas, and vice versa. In the mining industry, some deposits contain several different kinds of minerals. These are geologically related, and percentage depletion as to any of them could be plowed back as to any or all of them.

My amendment provides that percentage depletion and plowback are to be separately considered for activities within the United States and its continental shelf and activities abroad. This is designed to continue the separate consideration of taxation of foreign income.

The definition of expenditures which will qualify as plowback expenditures for the purpose of enabling a taxpayer to retain the present rates of percentage depletion is, in my judgment, both liberal and realistic. The costs of exploration to find mineral properties, including typical geological and geophysical exploration expenditures, would qualify. So would the costs of acquisition of mineral properties—bonuses paid to owners, the purchase price paid for a mineral property, and commissions. Delay rentals are not intended to be covered, because by their very nature, they "delay" development of a mineral resource for the benefit of consumers. Also qualifying would be costs of development, which would include intangible drilling and development costs, the cost of plants, well pipe, and facilities required for drilling, mining, and producing minerals to a readily marketable state. Thus, defining facilities would not qualify in the petroleum industry, because crude oil is "readily marketable." Construction of a pipeline incidental to moving crude oil to a storage tank on the cost of the storage tank would qualify. So would the cost of transporting minerals from a mine to the point at which they must be processed to a readily marketable state. Finally, expenditures for research and development of methods of discovery and recovery would qualify, because these are calculated to enable minerals to more efficiently be found and produced for the benefit of consumers. Fees, wages, and salaries incurred in connection with any of these qualifying activities also qualify, and if an employee's services are partly in connection with a qualifying activity and partly in connection with a nonqualifying activity, his salary should be appropriately allocated.

I recognize that a taxpayer would be allowed to currently deduct many of these qualifying expenditures; and in other cases he would capitalize them and be permitted to deduct depreciation. That is not relevant to the plowback approach. What counts is that the taxpayer makes expenditures during the current taxable year and the 2 succeeding years which are equal in amounts to its percentage depletion deduction for the current taxable year, and that these expenditures are of a nature which can be reasonably expected to bring more and better quality minerals to the consuming public. In the case of overseas operations, such expenditures would have a twofold effect: First, in some cases at least they would bring more and better quality minerals to the consuming public in the United States; and second, they would enable our taxpayers having foreign operations to more effectively compete in overseas markets, thus improving our balance-of-payments position through long-established policies of repatriating substantial profits to the United States and also providing a growing market for our own export trade.

Mr. President, the time is past due to reform our tax law to see to it that the very technical provisions of the Internal Revenue Code affecting the extractive industries conform to national policy. The House-passed bill does not do this. My amendment does.

RAISE THE ANNUAL EARNINGS LIMITATION

Mr. BYRD of West Virginia. Mr. President, during the transaction of morning business today I introduced a bill to raise the annual earnings limitation of social security recipients from $1,680 to $2,400—an increase that I feel is necessary for many retired Americans to maintain an adequate standard of living.

I have already introduced legislation to grant across-the-board increases in social security benefits, which now average just $99.86 a month. It is a logical step, then, to also raise the limitation currently placed on the amount a social security recipient can earn without losing a portion of his benefits. Both the

benefits and the earnings limitation should reflect the spiraling cost of living.

The President has proposed to increase the earnings limitation from $1,680 to $1,800 a year—undoubtedly a step in the right direction. However, there has been a precipitous rise in the cost of living since the last social security increase was enacted in the fall of 1967.

My proposal would not only offset the recent rise in the consumer price index; but it would also make up for past instances when cost of living increases were not matched by increases in the earnings limitation—and it would effectively cover some of the additional cost of living increases that will likely be visited upon these fixed-income Americans before the Social Security Act is again amended in the future.

Mr. President, we must realize that people now reaching age 65 have usually had the advantage of better health care than prior generations of social security recipients—a fact that is contributing to a longer life span and the ability of people to continue with some kind of work after retirement. This generation of social security recipients is also likely to have acquired more skills during their working years than did the last generation. We need to preserve those skills, and to encourage people to work, rather than to penalize them for working.

We must also realize that, since the minimum wage has risen, the social security recipient now reaches the earnings limitation in less time than ever before. Thus, at a time when he needs most to work to supplement inadequate benefits, he is severely penalized and limited in doing so.

Ideally, Mr. President, the earnings limitation—or retirement test, as it is sometimes called—should be repealed. But I am advised that this is not economically feasible, as it would cost several billions of dollars.

The ceiling of $2,400 which I propose would, I believe, exempt most of the earnings for those people who must work to supplement their social security benefits. At the same time, of course, it would be less expensive than abolishing the limitation. Under my proposal, the annual cost would be an estimated $1.3 billion.

I hope that Congress will decide to go beyond the President's recommendation and set the earnings limitation at $2,400 a year. It seems clear to me that such a change would more realistically meet the needs of so many Americans.

We cannot justify asking a great many of our social security recipients—people who played a large part in building America into the world's most affluent society—to subsist below the norm.

ADJOURNMENT

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move in accordance with the previous order that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 6 o'clock and 56 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, October 22, 1969, at 12 noon.

NOMINATIONS

Executive nominations received by the Senate October 21, 1969:

U.S. ADVISORY COMMISSION ON INTERNATIONAL EDUCATIONAL AND CULTURAL AFFAIRS

The following-named persons to be members of the U.S. Advisory Commission on International Educational and Cultural Affairs for terms expiring May 11, 1972:

David R. Derge, of Indiana, vice Dr. Joseph R. Smiley, term expired.

Jewel LaFontant, of Illinois, vice Dr. Pauline Tompkins, term expired.

William C. Turner, of Arizona, vice Dr. Walter Adams, term expired.

U.S. ATTORNEY

William C. Lee, of Indiana, to be U.S. attorney for the northern district of Indiana for the term of 4 years vice Alfred W. Moellering.

U.S. MARSHAL

Andrew J. F. Peeples, of Florida, to be U.S. marshal for the middle district of Florida for the term of 4 years vice John E. Maguire, Sr.

Anthony E. Rozman of Michigan to be U.S. marshal for the eastern district of Michigan for the term of 4 years vice Orville H. Trotter, term expired.

CONFIRMATIONS

Executive nominations confirmed by the Senate October 21, 1969:

NATIONAL LIBRARY OF MEDICINE

William O. Baker, of New Jersey, to be a member of the Board of Regents, National Library of Medicine, Public Health Service, for a term of 4 years from August 3, 1969.

Jack Malcolm Layton, of Arizona, to be a member of the Board of Regents, National Library of Medicine, Public Health Service, for a term expiring August 3, 1973.

HOUSE OF REPRESENTATIVES—*Tuesday, October 21, 1969*

The House met at 12 o'clock noon.

Rev. Ronald W. Carter, Riverlawn Christian Church, Wichita, Kans., offered the following prayer:

Father, I come to You today to ask Your blessing upon this meeting. I know, Father, that You know each of these men, that You know their names, that You know their addresses, that You know their families, that You know all about them; so, Father, help each man, no matter what his duty here today, to remember that he is an American; an American with a heritage to be proud of; an American with a present to be concerned about, and an American with a future to prepare for. So bless each man, Father, and give him wisdom, courage, national pride, and perhaps, even tears, that he might do everything to keep America always a land of the free and the home of the brave. In Jesus' name I ask it. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed, with amendments in which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 9946. An act to authorize and direct the Secretary of Agriculture to quitclaim retained rights in certain tracts of land to the Board of Education of Lee County, S.C.; and

H.R. 11702. An act to amend the Public Health Service Act to improve and extend the provisions relating to assistance to medical libraries and related instrumentalities, and for other purposes.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 1181. An act to provide for potato and tomato promotion programs;

S. 2264. An act to amend the Public Health Service Act to provide authorization for grants for communicable disease control and vaccination assistance; and

S. 2452. An act to amend section 211 of the Public Health Service Act to equalize the retirement benefits for commissioned officers of the Public Health Service with retirement benefits provided for other officers in the uniformed services.

REV. RONALD W. CARTER

(Mr. HALL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HALL. Mr. Speaker, it is my privilege and honor to associate myself with the invocation of Rev. Ronald W. Carter, the young man who offered the invocation in our Chambers this morning.

Reverend Carter is the son of Mr. and Mrs. Winston Carter of Carthage, Mo., whom it is my pleasure to represent in the Congress.

Reverend Carter is a graduate of the Ozark Bible College in Joplin, Mo., which is also located in the Seventh Congressional District of Missouri.

He was named third honor student, as well as class orator of his 1968 graduating class.

At the present time, Reverend Carter is minister of the Riverlawn Christian Church of Wichita, Kans. His equally young and most attractive lady is from Indiana.

I commend this young man on accepting the call to Christian service; I also commend his father and mother—seated in the gallery today—for obviously creating a Christian home which has helped prepare him for duty in the church.

In the words of Luke:

A good man brings good out of the treasure of good things in his heart. For a man's mouth speaks what his heart is full of.

Mr. SHRIVER. Mr. Speaker, will the gentleman yield?

Mr. HALL. I yield to the gentleman from Kansas.

Mr. SHRIVER. Mr. Speaker, the opening prayer today was offered by Rev.

Ronald W. Carter, minister of the Riverlawn Christian Church in Wichita, Kans. I am proud that he now is a constituent of mine in the Kansas Fourth Congressional District, and serving as spiritual leader of a fine congregation.

This morning he has provided us with an inspirational prayer in keeping with the serious times in which we live. I commend Reverend Carter for his dedication and service to Christianity and to the needs of his congregation.

Ever since the Pilgrim Fathers knelt on the deck of the *Mayflower* 350 years ago, it has been the sacred and valued civil right of citizens in America to worship and give thanks to God.

I am proud that the House of Representatives opens each day's proceedings with a prayer, and it is reassuring indeed to have a young minister such as Reverend Carter lead us in prayer.

Mr. ROUDEBUSH. Mr. Speaker, will the gentleman yield?

Mr. HALL. I yield to my distinguished colleague, the gentleman from Indiana (Mr. ROUDEBUSH).

Mr. ROUDEBUSH. Mr. Speaker, I wish to associate myself with the remarks by our distinguished colleague, the Honorable DURWARD G. HALL, of Missouri.

The opening prayer today was offered by the Reverend Ronald W. Carter, of Carthage, Mo.

Reverend Carter's wife is from Indiana, and she and her parents, Mr. and Mrs. Dale Storms, rural route 5, Kokomo, Ind., are in the gallery today for the session.

I commend Reverend Carter for his work in the ministry and the appropriate tenor and delivery of his prayer here today.

A graduate of Ozark Bible College, in Joplin, Mo., Reverend Carter presently serves as minister of the Riverlawn Christian Church of Wichita, Kans.

He also served for 3 years as minister of the Christian Church, at Liberal, Mo.

I believe my colleague, the gentleman from Missouri (Mr. HALL), will agree that in addition to his excellent education and experience, Reverend Carter showed an uncommon amount of intelligence and foresight by marrying a girl from the State of Indiana.

PROVIDING FOR CONSIDERATION OF JOINT RESOLUTION MAKING CONTINUING APPROPRIATIONS, 1970

Mr. MAHON. Mr. Speaker, I ask unanimous consent that it may be in order any day next week for the House to consider a joint resolution making continuing appropriations for the fiscal year 1970.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. GROSS. Reserving the right to object, Mr. Speaker, can we be given something of a firmer date than "any time next week"? That, it seems to me, is a little flexible.

Mr. MAHON. I have been thinking in terms of bringing it up on Monday next so that the other body would have more time to consider the matter before the present continuing resolution expires on October 31. However, I did not want to tie ourselves to any one certain day. The request is that it be in order on any day next week to bring the matter before the House. If it is not Monday, then I would hope it would be Tuesday. We will confer with the leadership on the precise time.

Mr. GROSS. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

IN DEFENSE OF THE SPEAKER

(Mr. SIKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SIKES. Mr. Speaker, the front page of today's Washington Post carries a headline entitled "Speaker's Friend Got Stock Option." In the body of the article in the third paragraph, the statement is made:

> There is no indication that MCCORMACK was involved in the case.

The question naturally arises, why link the Speaker's name with the case? Undoubtedly, each of us has friends who have held stock options. This is a normal part of business practice. Apparently, the Post, which is an ultraliberal publication, is simply seeking to discredit the Speaker of the House of Representatives because of personal bias or through resentment at the fact that as a presiding officer he is scrupulously fair both to liberals and to conservatives. Unfortunately, the Supreme Court of the United States has ruled that public figures may be libeled at will with complete immunity from libel laws. This does not alter the considerations of decency, something completely lacking in the way this case is reported.

JOHN MCCORMACK is a kindly, courteous, and honest gentleman. He is one of the finest and fairest of presiding officers, and his personal life is an example of scrupulous integrity. I am proud of my friendship for JOHN MCCORMACK and I deplore the underhanded effort which is afoot in some quarters to reflect upon his great name.

COAL MINE HEALTH AND SAFETY

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, when the coal mine health and safety bill is considered, I shall offer the following amendments:

First, to abolish the Federal Coal Mine Health and Safety Board of Review, a special-interest board of private individuals who would have power to veto safety and penalty orders by responsible officials in the Department of the Interior;

Second, to measure coal dust during one shift, instead of averaging the measurement over several shifts as the bill now provides. If the averaging method is used, a "cleanup" shift can be rushed in to bring the average down;

Third, to require the Secretary of Health, Education, and Welfare to set medically acceptable coal dust standards which protect the health of the miner, instead of being forced to raise coal dust standards to meet pressure from considerations other than health;

Fourth, to require that electrical equipment in gassy mines be made safe and spark-proof in 15 months instead of the 28 months after enactment of the bill, which is now in the House bill; to eliminate the open ended, indefinite waiver which the bill now provides for all so-called nongassy mines, large and small, enabling such mines to keep dangerous electrical equipment for an indefinite period if spark-free equipment is not "available"; to require that even the smallest so-called nongassy mines get their electrical equipment house in order within 3 to 4 years;

Fifth, to protect miners against losing their jobs or being discriminated against for reporting health and safety violations;

Sixth, to provide criminal penalties for deliberate violations of closing orders in all cases;

Seventh, to provide for autopsies with consent of next of kin;

Eighth, to give miners the right to sue, accompanied by trial by jury, in the case of mine accidents;

Ninth, to control the noise level in coal mines; and

Tenth, to allow a miner who shows the incipient stages of pneumoconiosis to request to be reassigned to an area where the coal dust level is no more than 1.0 milligram per cubic meter of air.

APPOINTMENT OF CONFEREES ON H.R. 12982, DISTRICT OF COLUMBIA REVENUE ACT OF 1969

Mr. MCMILLAN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 12982) to provide additional revenue for the District of Columbia, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina? The Chair hears none, and appoints the following conferees: Messrs. MCMILLAN, ABERNETHY, DOWDY, CABELL, NELSEN, HARSHA, BROYHILL of Virginia, and HOGAN.

PERMISSION FOR SUBCOMMITTEE NO. 5, COMMITTEE ON THE JUDICIARY, TO SIT DURING GENERAL DEBATE OCTOBER 22, AND FOR SUBCOMMITTEE NO. 4, COMMITTEE ON THE JUDICIARY, TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that Subcommittee No. 5 of the Committee on the Judiciary may sit during general debate on October 22, and that Subcommittee No. 4 of the Committee on the Judiciary may sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

JOHN VINCENT AMIRAULT

The Clerk called the bill (H.R. 2552) for the relief of John Vincent Amirault.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

REFERENCE OF CLAIM OF JESUS J. RODRIGUEZ

The Clerk called House Resolution 86, referring the bill (H.R. 1691) to the Chief Commissioner of the Court of Claims.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MRS. BEATRICE JAFFE

The Clerk called the bill (H.R. 1865) for the relief of Mrs. Beatrice Jaffe.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

AMALIA P. MONTERO

The Clerk called the bill (H.R. 6375) for the relief of Amalia P. Montero.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

VISITACION ENRIQUEZ MAYPA

The Clerk called the bill (H.R. 6389) for the relief of Visitacion Enriquez Maypa.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

YAU MING CHINN (GON MING LOO)

The Clerk called the bill (S. 1438) for the relief of Yau Ming Chinn (Gon Ming Loo).

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

CAPT. MELVIN A. KAYE

The Clerk called the bill (H.R. 1453) for the relief of Capt. Melvin A. Kaye.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ROBERT G. SMITH

The Clerk called the bill (H.R. 3723) for the relief of Robert G. Smith.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MRS. RUTH BRUNNER

The Clerk called the bill (H.R. 9488) for the relief of Mrs. Ruth Brunner.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MRS. IRENE G. QUEJA

The Clerk called the bill (S. 564) for the relief of Mrs. Irene G. Queja.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

FAVORING THE SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

The Clerk called the concurrent resolution (S. Con. Res. 33) favoring the suspension of deportation of certain aliens.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this concurrent resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

DELILAH AURORA GAMATERO

The Clerk called the bill (H.R. 2817) for the relief of Delilah Aurora Gamatero.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MRS. SABINA RIGGI FARINA

The Clerk called the bill (H.R. 3629) for the relief of Mrs. Sabina Riggi Farina.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

PLACIDO VITERBO

The Clerk called the bill (H.R. 3955) for the relief of Placido Viterbo.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the reqeust of the gentleman from Iowa?

There was no objection.

WILLIAM PATRICK MAGEE

The Clerk called the bill (H.R. 9001) for the relief of William Patrick Magee.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

WILLIAM D. PENDER

The Clerk called the bill (S. 901) for the relief of William D. Pender.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MRS. ROSE THOMAS

The Clerk called the bill (H.R. 2302) for the relief of Mrs. Rose Thomas.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MILOYE M. SOKITCH

The Clerk called the bill (H.R. 3571) for the relief of Miloye M. Sokitch.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

CONFERRING JURISDICTION ON CLAIM OF PHILIP J. FICHMAN

The Clerk called the bill (H.R. 10658) conferring jurisdiction upon the U.S. Court of Claims to hear, determine, and render judgment upon the claim of Philip J. Fichman.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

RAYMOND C. MELVIN

The Clerk called the bill (S. 632) for the relief of Raymond C. Melvin.

There being no objection, the Clerk read the bill, as follows:

S. 632

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of clause (1) of section 2733 of title 10, United States Code, and any regulations promulgated pursuant to such clause, the Secretary of the Army is authorized to receive, consider, settle, and pay any claim filed under such section within six months after the date of enactment of this Act by Raymond C. Melvin, of Burlington, Vermont, for permanent physical injury suffered by him as a result of the accidental explosion of a blasting cap allegedly left by United States Army personnel in an area near a military housing development where children were known to play and which was found by said Raymond C. Melvin on July 4, 1964, while playing in such area.

With the following committee amendment:

Page 1, line 4, strike "2733" and insert "2733(b)".

The committee amendment was agreed to.

AMENDMENT OFFERED BY MR. DONOHUE

Mr. DONOHUE. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DONOHUE: On page 2, line 3, strike "July 4, 1964" and insert "or about July 6, 1964"

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CAPT. WILLIAM O. HANLE

The Clerk called the bill (S. 882) for the relief of Capt. William O. Hanle.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

REFERENCE OF CLAIMS OF BRANKA MARDESSICH AND SONIA S. SILVANI

The Clerk called House Resolution 498, to refer the bill (H.R. 4498) entitled "A bill for the relief of Branka Mardessich and Sonia S. Silvani" to the Chief Commissioner of the Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

MRS. BARBARA K. DIAMOND

The Clerk called the bill (H.R. 2963) for the relief of Mrs. Barbara K. Diamond.

There being no objection, the Clerk read the bill, as follows:

H.R. 2963

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 15 to 20, inclusive, of the Federal Employees' Compensation Act are hereby waived in favor of Mrs. Barbara K. Diamond, San Francisco, California, and her claim for compensation for the death of her husband, Morris Diamond, a former employee of the Bureau of Land Management, Department of the Interior, who died in Denver, Colorado, on March 7, 1957, shall be acted upon under the remaining provisions of such Act if she files such claim with the Bureau of Employees' Compensation, Department of Labor, within six months after the date of enactment of this Act. No benefits shall accrue by reason of the enactment of this Act for any period prior to the date of enactment.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BERT N. ADAMS AND EMMA ADAMS

The Clerk called the bill (H.R. 7567) for the relief of Bert N. Adams and Emma Adams.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MR. AND MRS. JOHN F. FUENTES

The Clerk called the bill (H.R. 11500) for the relief of Mr. and Mrs. John F. Fuentes.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

ROSE MINUTILLO

The Clerk called the bill (H.R. 12089) for the relief of Rose Minutillo.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

IRVING M. SOBIN CO., INC., AND/OR IRVING M. SOBIN CHEMICAL CO., INC.

The Clerk called the bill (H.R. 1782) for the relief of Irving M. Sobin Co., Inc., and/or Irving M. Sobin Chemical Co., Inc.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill is passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

MR. AND MRS. WONG YUI

The Clerk called the bill (S. 92) for the relief of Mr. and Mrs. Wong Yui.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

DUG FOO WONG

The Clerk called the bill (S. 2019) for the relief of Dug Foo Wong.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

KONG WAN NOR

The Clerk called the bill (H.R. 5936) for the relief of Kong Wan Nor.

There being no objection, the Clerk read the bill, as follows:

H.R. 5936

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 203(a) (2) and 204 of the Immigration and Nationality Act, Kong Wan Nor shall be held and considered to be the natural born alien child of Mr. and Mrs. Jo-Yum Kong, lawfully admitted resident aliens in the United States: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such parentage, relationship, be accorded any rights, privilege, or status under the Immigration and Nationality Act.

With the following committee amendments:

On page 1, line 8, after the words "natural parents" insert "or brothers or sisters".

On page 1, line 9, after the word "such" strike out the word "parentage" and insert in lieu thereof the word "relationship".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TIMOTHY L. ANCRUM (ALSO KNOWN AS TIMMIE ROGERS)

The Clerk called the bill (H.R. 3590) for the relief of Timothy L. Ancrum (also known as Timmie Rogers).

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ELGIE L. TABOR

The Clerk called the bill (H.R. 9591) for the relief of Elgie L. Tabor.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Elgie L. Tabor (lieutenant colonel, United States Air Force, retired, FV 573 538) of San Antonio, Texas, is relieved of liability to the United States in the amount of $2,499.22, representing overpayments of active duty pay received by the said Elgie L. Tabor for the period ending November 25, 1966, as a result of an administrative error which, through no fault of his own, occurred to crediting him with certain service in the Texas National Guard.

SEC. 2. (a) The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Elgie L. Tabor an amount equal to the aggregate of the amounts paid by him, or withheld from sums otherwise due him, with respect to the indebtedness to the United States specified in the first section of this Act.

(b) No part of the amount appropriated in subsection (a) of this section in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this subsection shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 1, lines 7 and 8, strike "ending November 25, 1966," and insert "from January 20, 1943, through January 9, 1960, inclusive,".

Page 2, line 8, strike "in excess of 10 per centum thereof".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

REFERENCE OF CLAIM OF JOHN S. ATTINELLO

The Clerk called House Resolution 533, to refer the bill (H.R. 3722) entitled "A bill for the relief of John S. Attinello" to the Chief Commissioner of the Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code, as amended.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

PROVIDING FOR THE CONVEYANCE OF CERTAIN MINERAL RIGHTS IN AND UNDER LANDS IN PIKE COUNTY, GA.

The Clerk called the bill (H.R. 1706) to provide for the conveyance of certain mineral rights in and under lands in Pike County, Ga.

There being no objection, the Clerk read the bill, as follows:

H.R. 1706

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all mineral interests which are now owned by the United States in the following described land are hereby quitclaimed to the owner or owners of the surface of the land:

All that tract or parcel of land situated, lying, and being in land lot 132 of the eighth land district of Pike County, Georgia, containing 1,642 acres of land, more of less, and being more particularly designated as "Tract B" on a plat of survey prepared by J. W. Oxford, Junior, registered land surveyor, dated April 27, 1965, and being recorded in Plat Book 2, Page 129, Clerk's Office, Superior Court, Pike County, Georgia, as follows:

Beginning at the point of intersection of the east boundary line of land lot 132 in the eighth land district of Pike County, Georgia, with the south right-of-way line of State Highway Numbered 18;

run thence in a northwesterly direction along the south right-of-way line of said Highway Numbered 18 a distance of 168.7 feet to a point marked by an iron stake and the real point of beginning;

run thence north 53 degrees 14 minutes west a distance of 194.5 feet to a point marked by an iron stake;

run thence south 1 degree 37 minutes west a distance of 881.4 feet to a point marked by an iron stake;

run thence north 88 degrees 31 minutes east a distance of 26.1 feet to a point marked by an iron stake;

run thence north 8 degrees 47 minutes east a distance of 469.9 feet to a point marked by an iron stake;

run thence north 15 degrees 25 minutes east a distance of 310.6 feet to a point marked by an iron stake, and the real point of beginning, all as shown on the aforesaid plat prepared by the said J. W. Oxford, Junior.

The within conveyed real estate is bounded now or formerly as follows: North by State Highway Numbered 18; west by lands of Tom Littleton; south by that public road known as the Campground Road, and east by lands of O. M. Littleton.

The grantee herein shall take by such conveyance the same estate in the minerals quitclaimed hereby, as he owns in the surface of the land described herein.

With the following committee amendments:

Page 3, strike out all of lines 4, 5, and 6.

Page 3, add a new section 2 reading as follows:

"SEC. 2. The provisions of section 1 of this Act shall become effective upon payment by the grantee of $200 to reimburse the United States for the administrative costs of the conveyance, plus payment of the estimated fair market value of the minerals in such lands, if any."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER. This concludes the call on the Private Calendar.

CALL OF THE HOUSE

Mr. HUNT. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 236]

Arends	Findley	Morse
Ashley	Ford, William D.	Morton
Bingham	Gallagher	O'Konski
Blackburn	Garmatz	Ottinger
Brooks	Goldwater	Passman
Burton, Utah	Gray	Powell
Cabell	Hagan	Quie
Cahill	Halpern	Reid, Ill.
Carey	Hays	Reid, N.Y.
Clark	Holifield	Riegle
Clausen, Don H.	Howard	Rivers
Clay	Jones, N.C.	Rodino
Corman	Jones, Tenn.	Rosenthal
Culver	Karth	Ruppe
Dawson	Kirwan	Sandman
Devine	Landrum	Scheuer
Diggs	Lipscomb	Steiger, Wis.
Dingell	Long, La.	Teague, Calif.
Dorn	McCarthy	Teague, Tex.
Downing	Macdonald, Mass.	Ullman
Eckhardt	Martin	Utt
Edwards, Ala.	Mills	Vanik
Eshleman	Minshall	Watts
Fascell		Whalley

The SPEAKER. On this rollcall 360 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERMISSION FOR COMMITTEE ON RULES TO FILE CERTAIN PRIVILEGED REPORTS

Mr. COLMER. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

POLITICS CAST SHADOW OVER PRESIDENT'S NOVEMBER 3 ADDRESS

(Mr. FULTON of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FULTON of Tennessee. Mr. Speaker, recently spokesmen for the administration requested a 60-day moratorium on criticism of the administration's policies in and conduct of the Vietnam war.

When the announcement came, I agreed that any reasonable request which might lead Hanoi to negotiate seriously should be given careful consideration. It seemed to me that this was a reasonable request and I, for my part, agreed.

In the wake of the request comes news that President Nixon plans to make a major speech on his policies and conduct of the war November 3. The announcement of the speech was a shock and a disappointment. What inappropriate and partisan timing.

The President has scheduled his talk less than 24 hours before the polls open in at least five States where major general elections are to be held and where, in several cases, the war in Vietnam is an issue.

In New York, Vietnam is an issue in the mayor's election. Other elections include races for Governor in New Jersey and Virginia, a congressional seat in New Jersey and mayoralty elections in Detroit, Cleveland, and Pittsburgh.

The President is certainly not unmindful of the adverse political impact his policies have had in several special congressional elections this year in which opponents of his policies have emerged winners.

Is cooperation a two-way street in the administration's view?

Does the administration on the one hand feel that it is proper to ask for bipartisan support of a 60-day moratorium on policiy criticism and, on the other hand, go to the public for discussion of these policies on the eve of major political elections?

Perhaps the President's advisers were not as aware as they might be of the impropriety of the timing of his speech. It is not too late to delay it 24 or 48 hours and this should be done if the administration does not want to give rise to a new and decisive credibility gap.

CONFERENCE REPORT ON S. 1689, CHILD PROTECTION AND TOY SAFETY ACT OF 1969

Mr. STAGGERS submitted the following conference report and statement on the bill (S. 1689) to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 91-581)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1689) to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the House amendment insert the following:

"SECTION 1. This Act may be cited as the 'Child Protection and Toy Safety Act of 1969'.

"SEC. 2. (a) Section 2(f)1 of the Federal Hazardous Substances Act (15 U.S.C. 1261(f)(1)) is amended by adding at the end thereof the following:

"'(D) Any toy or other article intended for use by children which the Secretary by regulation determines, in accordance with section 3(e) of this Act, presents an electrical, mechanical, or thermal hazard.'

"(b) Section 3 of such Act (15 U.S.C. 1262) is amended by adding at the end thereof the following new subsection:

"'(e)(1) A determination by the Secretary that a toy or other article intended for use by children presents an electrical, mechanical, or thermal hazard shall be made by regulation in accordance with the procedures prescribed by section 553 (other than clause (B) of the last sentence of subsection (b) of such section) of title 5 of the United States Code unless the Secretary elects the procedures prescribed by subsection (e) of section 701 of the Federal Food, Drug, and Cosmetic Act, in which event such subsection and subsections (f) and (g) of such section 701 shall apply to the making of such determination. If the Secretary makes such election, he shall publish that fact with the proposal required to be published under paragraph (1) of such subsection (e).

"'(2) If, before or during a proceeding pursuant to paragraph (1) of this subsection, the Secretary finds that, because of an electrical, mechanical, or thermal hazard, distribution of the toy or other article involved presents an imminent hazard to the public health and he, by order published in the Federal Register, gives notice of such finding, such toy or other article shall be deemed to be a banned hazardous substance for purposes of this Act until the proceeding has been completed. If not yet initiated when such order is published, such a proceeding shall be initiated as promptly as possible.

"'(3)(A) In the case of any toy or other article intended for use by children which is determined by the Secretary, in accordance with section 553 of title 5 of the United States Code, to present an electrical, mechanical, or thermal hazard, any person who will be adversely affected by such a determination may, at any time prior to the 60th day after the regulation making such determination is issued by the Secretary, file a petition with the United States Court of Appeals for the circuit in which such person resides or has his principal place of business for a judicial review of such determination. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary or other officer designated by him for that purpose. The Secretary shall file in the court the record of the proceedings on which the Secretary based his determination, as provided in section 2112 of title 28 of the United States Code.

"'(B) If the petitioner applies to the court for leave to adduce additional evidence, and shows to the satisfaction of the court that such additional evidence is material and that there was no opportunity to adduce such evidence in the proceeding before the Secretary, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Secretary in a hearing or in such other manner, and upon such terms and conditions, as to the court may seem proper. The Secretary may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken, and he shall file such modified or new findings, and his recommendation, if any, for the modification or setting aside of his original determination, with the return of such additional evidence.

"'(C) Upon the filing of the petition under this paragraph, the court shall have jurisdiction to review the determination of the Secretary in accordance with subparagraphs (A), (B), (C), and (D) of paragraph (2) of the second sentence of section 706 of title 5 of the United States Code. If the court ordered additional evidence to be taken under subparagraph (B) of this paragraph, the court shall also review the Secretary's determination to determine if, on the basis of the entire record before the court pursuant to subparagraphs (A) and (B) of this paragraph, it is supported by substantial evidence. If the court finds the determination is not so supported, the court may set it aside. With respect to any determination reviewed under this paragraph, the court may grant appropriate relief pending conclusion of the review proceedings, as provided in section 705 of such title.

"'(D) The judgment of the court affirming or setting aside, in whole or in part, any such determination of the Secretary shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification, as provided in section 1254 of title 28 of the United States Code.'

"(c) The proviso in section 2(q)(1) of such Act is amended by inserting 'or necessarily present an electrical, mechanical, or thermal hazard' after 'hazardous substance involved'.

"(d) Section 2 of such Act is amended by adding at the end thereof the following:

"'(r) An article may be determined to present an electrical hazard if, in normal use or when subjected to reasonably foreseeable damage or abuse, its design or manufacture may cause personal injury or illness by electric shock.

"'(s) An article may be determined to present a mechanical hazard if, in normal use or when subjected to reasonably foreseeable damage or abuse, its design or manufacture presents an unreasonable risk of personal injury or illness (1) from fracture, fragmentation, or disassembly of the article, (2) from propulsion of the article (or any part or accessory thereof), (3) from points or other protrusions, surfaces, edges, openings, or closures, (4) from moving parts, (5) from lack or insufficiency of controls to reduce or stop motion, (6) as a result of self-adhering characteristics of the article, (7) because the article (or any part or accessory thereof) may be aspirated or ingested, (8) because of instability, or (9) because of any other aspect of the article's design or manufacture.

"'(t) An article may be determined to present a thermal hazard if, in normal use or when subjected to reasonably foreseeable damage or abuse, its design or manufacture presents an unreasonable risk of personal injury or illness because of heat as from heated parts, substances, or surfaces.'

"SEC. 3. (a) Subparagraph 1(A) of section 2(f) of the Federal Hazardous Substances Act (15 U.S.C. 1261(f)(1)(A)) is amended by inserting 'or combustible' after 'flammable'.

"(b) Section 2(l) of such Act (15 U.S.C. 1261(l)) is amended—

"(1) by striking out 'and the term' and inserting in lieu thereof 'the term';

"(2) by inserting before the semicolon the following: ', and the term "combustible" shall apply to any substance which has a flash point above eighty degrees Fahrenheit to and including one hundred and fifty degrees as determined by the Tagliabue Open Cup Tester';

"(3) by inserting 'or combustibility' after 'flammability'; and

"(4) by inserting ', "combustible",' after 'the terms "flammable" '.

"(c) Section 2(p)(1)(E) of such Act (15 U.S.C. 1261(p)(1)(E)) is amended by inserting '"Combustible," ' after '"Flammable," '.

"SEC. 4. (a) The Federal Hazardous Substances Act is amended by redesignating sections 15, 16, 17, and 18 as sections 16, 17, 18, and 19, respectively, and by inserting after section 14 the following new section:

"'REPURCHASE OF BANNED HAZARDOUS SUBSTANCES

"'SEC. 15. (a) In the case of any article or substance sold by its manufacturer, distributor, or dealer which is a banned hazardous substance (whether or not it was such at the time of its sale), such article or substance shall, in accordance with regulations of the Secretary, be repurchased as follows:

"'(1) The manufacturer of any such article or substance shall repurchase it from the person to whom he sold it, and shall—

"'(A) refund that person the purchase price paid for such article or substance,

"'(B) if that person has repurchased such article or substance pursuant to paragraph (2) or (3), reimburse him for any amounts paid in accordance with that paragraph for the return of such article or substance in connection with its repurchase, and

"'(C) if the manufacturer requires the return of such article or substance in connection with his repurchase of it in accordance with this paragraph, reimburse that person for any reasonable and necessary expenses incurred in returning it to the manufacturer.

"'(2) The distributor of any such article or substance shall repurchase it from the person to whom he sold it, and shall—

"'(A) refund that person the purchase price paid for such article or substance,

"'(B) if that person has repurchased such article or substance pursuant to paragraph (3), reimburse him for any amounts paid in accordance with that paragraph for the return of such article or substance in connection with its repurchase, and

"'(C) if the distributor requires the return of such article or substance in connection with his repurchase of it in accordance with this paragraph, reimburse that person for any reasonable and necessary expenses incurred in returning it to the distributor.

"'(3) In the case of any such article or substance sold at retail by a dealer, if the person who purchased it from the dealer returns it to him, the dealer shall refund the purchaser the purchase price paid for it and reimburse him for any reasonable and necessary transportation charges incurred in its return.

"'(b) For the purposes of this section, (1) the term 'manufacturer' includes an importer for resale, and (2) a dealer who sells at wholesale an article or substance shall with respect to that sale be considered the distributor of that article or substance.'

"(b)(1) Subsection (a) of the section of such Act redesignated as section 18 is amended by striking out 'section 18' and inserting in lieu thereof 'section 19'.

"(2) The section of such Act redesignated as section 19 is amended by striking out 'section 16(b)' and inserting in lieu thereof 'section 17(b)'.

"SEC. 5. The amendments made by this Act shall take effect on the sixtieth day following the date of the enactment of this Act."

And the House agree to the same.

HARLEY O. STAGGERS,
JOHN E. MOSS,
JOHN M. MURPHY,
WILLIAM L. SPRINGER,
HASTINGS KEITH,
Managers on the Part of the House.

FRANK E. MOSS,
PHILIP HART,
JOHN PASTORE,
JAMES B. PEARSON,
CHARLES GOODELL,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1689) to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

The House amendment struck out all of the Senate bill after the enacting clause and inserted a substitute. The Senate recedes from its disagreement to the amendment of the House, with an amendment which is a substitute for both the Senate bill and the House amendment. The conference substitute is in large part the same as the House amendment. The differences between the House amendment and the substitute agreed to in conference are noted below except for minor technical and clarifying changes made necessary by reason of the conference agreement.

In this statement of managers, the Secretary of Health, Education, and Welfare is referred to as the Secretary, the Federal Hazardous Substances Act is referred to as the Act, and toys or other articles intended for use by children are referred to as children's articles.

SHORT TITLE

The Senate bill's short title was "Toy Safety Act of 1969", and the short title in the House amendment was "Child Protection of 1969".

The short title of the conference substitute—"Child Protection and Toy Safety Act of 1969"—combines the short titles of the bill and amendment.

PROCEDURAL REQUIREMENTS FOR REGULATION OF CHILDREN'S ARTICLES THAT PRESENT ELECTRICAL, MECHANICAL OR THERMAL HAZARDS [SECS. 2(A) AND (B)]

The amendments to the Act made by subsections (a) and (b) of section 2 of the Senate bill provided a one-step regulation process to exclude from the market children's articles presenting electrical, mechanical, or thermal hazards. If the Secretary determined in accordance with the informal rulemaking requirements (notice and opportunity for submission of views) of section 553 of title 5 of the United States Code that a children's article presented an electrical, mechanical, or thermal hazard, then, under the amendment made by subsection (a), that article would be covered by the Act as a hazardous substance. Furthermore, that article would also be covered by the Act as a banned hazardous substance (and thus excluded from the market) because of the amendment made by subsection (b) of the Senate bill to the definition in the Act of banned hazardous substance and also because under that definition in existing law a children's article "which is a hazardous substance" is a banned hazardous substance.

Thus, under the Senate bill, a children's article determined to be a hazardous substance (and consequently a banned hazardous substance) because of an electrical, mechanical, or thermal hazard could be marketed only if it met the requirements of the exception provided for articles the functional purpose of which require the inclusion of such a hazard (e.g., wood burning sets).

Subsection (b) of the Senate bill also changed existing law with respect to children's articles which are hazardous substances under existing law to require that before such articles could be treated as banned hazardous substances, the Secretary would have to make a specific regulatory determination (under section 553 of title 5, United States Code) that the article was such a hazardous substance.

Under the provisions of the amendments made to the Act by subsections (a) and (b) of section 2 of the House amendment, control of the marketing of children's articles which present electrical, mechanical, or thermal hazards was a two-step process. First, if a children's article presented such a hazard, it would be a hazardous substance by operation of law and it could be marketed only if the labeling requirements of the Act were met. To classify such an article as a banned hazardous substance (and thus exclude it from commerce permanently) the Secretary was required to make a finding (in accordance with the formal rulemaking requirements of section 701 of the Federal Food, Drug, and Cosmetic Act) that the public could be adequately protected only by excluding the article from the market. However, pending completion of that formal rulemaking proceeding such an article could be excluded from commerce if the Secretary found that its distribution presented an imminent hazard to the public health and safety. No specific procedural requirements were provided for such finding other than giving notice of such finding by an order published in the Federal Register.

The conference substitute provides a one-step regulation process to control the marketing of children's articles which present electrical, mechanical, or thermal hazards. That is, only one proceeding (to determine if the article is a hazardous substance) is required to exclude the article from the market. However, the Secretary may exclude such an article from the market for a limited period either before or during the required proceeding if he finds that its distribution presents an imminent hazard to the public health and safety.

Subsection (a) of section 2 of the conference substitute amends the definition of hazardous substance in the Act to include children's articles which the Secretary by regulation determines present electrical, mechanical, or thermal hazards. As noted above, a determination that a children's article is a hazardous substance automatically makes it a banned hazardous substance since the definition of that term in section 2(q)(1)(A) of the Act includes any children's article "which is a hazardous substance."

A new subsection (e) added to section 3 of the Act by subsection (b) of section 2 of the substitute prescribes the procedure that the Secretary must follow in making a regulation determining that a children's article is a hazardous substance because of an electrical, mechanical, or thermal hazard. Under paragraph (1) of the new subsection, the determination is to be made in accordance with the informal rulemaking requirements of section 553 of title 5 of the United States Code unless the Secretary elects to follow the formal rulemaking requirements of subsection (e) of section 701 of the Federal Food, Drug, and Cosmetic Act. However, it is provided that if the Secretary proceeds under such section 553, he may not dispense with the sections initial procedural requirements as is authorized in the section in cases where notice and other procedures are found to be impracticable, unnecessary, or contrary to the public interest. If the Secretary determines that action must be taken quickly, he can issue a "stop order" under the provisions authorized by paragraph (2) of the new subsection.

Paragraph (2) of the new subsection provides that if the Secretary makes a finding that the distribution of such an article presents an imminent hazard to the public health and safety, such article shall be deemed to be a banned hazardous substance until a proceeding to determine if it is a hazardous substance is completed. A finding of "imminent hazard" may be made either before or during any such proceeding and does not have to be made in accordance with any specific procedural requirements (other than giving notice of such finding by publication of an order in the Federal Register). If it is made before such a proceeding, then such a proceeding must be started as promptly as possible. The "stop order" authorized by this paragraph applies, moreover, regardless of whether such proceeding is conducted under the informal rulemaking requirements of section 553 of title 5, United States Code, or the formal rulemaking requirements of section 701(e) of the Federal Food, Drug, and Cosmetic Act.

Paragraph (3) of the new subsection provides for judicial review of a determination of the Secretary that a children's article is a hazardous substance because of an electrical, mechanical, or thermal hazard if such determination is made by a regulation prescribed in accordance with section 553 of title 5, United States Code. (If the determination is made in accordance with subsection (e) of section 701 of the Federal Food, Drug, and Cosmetic Act, it would be reviewable under subsections (f) and (g) of such section 701 which are incorporated in the conference substitute by reference for application in such cases.)

The judicial review afforded by this paragraph where the section 553 procedure is followed is similar to the review authorized by section 105 of the National Traffic and Motor Vehicle Safety Act of 1966.

Under paragraph (3) of the new subsection, any person who will be adversely affected by a determination of the Secretary (made in accordance with the section 553 procedure) may, before the sixtieth day after

the regulation making such determination is issued, seek review in the United States court of appeals for the circuit in which such person resides or has his principal place of business. The court is authorized, upon request, to require that additional evidence (and evidence in rebuttal thereof) be taken before the Secretary in a hearing or in such other manner, and upon such terms and conditions, as to the court may seem proper, if such person shows to the satisfaction of the court that the additional evidence is material and that there was no opportunity to produce it in the proceeding before the Secretary. The court may, in accordance with section 706(2) of title 5, United States Code, set aside the Secretary's determination if it finds that it (1) is arbitrary, capricious, or otherwise not in accordance with law, (2) is contrary to constitutional right, power, and privilege, or immunity, (3) is in excess of statutory jurisdiction, authority, or limitation, or short of statutory right, or (4) was made without observance of procedure required by law. In addition, if during the course of the review under this paragraph additional evidence was ordered to be taken, the court may set aside the Secretary's determination if it finds that on the basis of the entire record before the court, including the record initially filed with the court, the determination is unsupported by substantial evidence. Pending the conclusion of any review proceeding initiated under the new paragraph (3), the court may grant appropriate relief (such as a stay of the effect of the Secretary's determination) as provided in section 705 of title 5 of the United States Code.

Subsection (c) of the conference substitute amends the proviso in section 2(q)(1). That proviso provides that in the case of children's articles that are, contain, or bear a hazardous substance, the Secretary shall by regulation provide that they will not be covered by the Act as a banned hazardous substance if the article's functional purpose requires the inclusion of the hazardous substance involved and if they are adequately and effectively labeled. The amendment to the proviso makes it clear that children's articles the functional purpose of which requires the inclusion of an electrical hazard, mechanical hazard, or thermal hazard may be marketed under regulations of the Secretary if the article bears labeling giving adequate direction and warnings for safe use and if the article is intended for use by children who have attained sufficient maturity, and may reasonably be expected, to read and heed such direction and warning.

OTHER PROVISIONS

The provisions of the conference substitute which define the terms electrical hazard, mechanical hazard, and thermal hazard are identical to the provisions of the House amendment defining those terms. The definition of mechanical hazard in the House amendment and the conference substitute was designed to assure that, together with the definitions of electrical and thermal hazards, this definition would cover any type of hazard presented by a children's article that is not already covered by existing law. For example, children's articles which generate damagingly high noise levels could be covered under the Act by that definition.

The other provisions of the conference substitute are also identical to the House amendment. Those provisions (1) include within the coverage of the Act combustible articles, (2) provide for the repurchase of banned hazardous substances, and (3) provide an effective date.

Managers on the Part of the House.

APPOINTMENT OF CONFEREES ON S. 2276, EXTENDING CLEAN AIR ACT

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 2276) to extend for 1 year the authorization for research relating to fuels and vehicles under the provisions of the Clean Air Act, with a House amendment thereto, insist on the House amendment, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia? The Chair hears none, and appoints the following conferees: Messrs. STAGGERS, JARMAN, ROGERS of Florida, SATTERFIELD, SPRINGER, NELSEN, and CARTER.

HOUSING AND URBAN DEVELOPMENT ACT OF 1969

Mr. MADDEN. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 580 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 580

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13827) to amend and extend laws relating to housing and urban development, and for other purposes, and all points of order against lines 19 and 20 on page 20, lines 13 through 22 on page 21, and lines 11 through 16 of the committee amendment on page 40 are hereby waived. After general debate, which shall be confined to the bill and shall continue not to exceed three hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the five-minute rule by title instead of by section. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 13827, the Committee on Banking and Currency shall be discharged from the further consideration of the bill S. 2864, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 13827 as passed by the House.

The SPEAKER. The gentleman from Indiana (Mr. MADDEN) is recognized for 1 hour.

Mr. MADDEN. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 580 provides an open rule with 3 hours of general debate for consideration of H.R. 13827 to extend and amend laws relating to housing and urban development and for other purposes.

This bill is the omnibus housing bill for this year and is needed to provide authorizations to continue our housing programs into fiscal year 1971 and to extend FHA mortgage insuring authority. While the four titles in the bill affect nearly all of our programs in this field, it appears to be relatively noncontroversial and was reported from the Committee on Banking and Currency unanimously. It is important that it be acted on promptly so that the administration will know the authorizations available when it plans for its budget request for next year.

In its testimony before the Committee on Rules, the Committee on Banking and Currency stated that there are no new major programs provided for in this bill reflecting the fact that the extensive acts of 1968 and other recent years created programs which are still being put into effect and perfected. Here are the major provisions in H.R. 13827.

The first title deals with mortgage credit and FHA insurance. It extends to next October the basic insuring authority of the Federal Housing Administration which would otherwise expire on January 1. The bill would make an upward adjustment of 10 percent in maximum FHA mortgage amounts to reflect the rise in construction and land costs in recent years and would authorize a modest reduction in downpayments on homes priced between $20,000 and $25,000 to bring them more in line with the low downpayments required on lower priced homes. It would also authorize an additional $25 million for interest subsidy payments under the section 235 homeownership program and the section 236 rental housing program to reflect higher construction costs and higher interest rates over the past year.

Title II of the bill covers urban renewal and public housing. This title would authorize $2 billion in urban renewal grant authority for fiscal year 1971, which is a modest increase over the $1,750,000,000 authorized for this year. It also provides that 35 percent of this amount be reserved for neighborhood development programs. It includes a provision, which many Members have been concerned about, extending for 1 year the eligibility period for noncash grant-in-aid credit under urban renewal to take account of the delay in Federal funding of NDP and other urban renewal projects. Another section removes the controversial income ceiling on low interest rehabilitation loans in urban renewal areas imposed last year but retains a priority for lower income borrowers. This title also authorizes some flexibility in the public housing contribution formula which was requested by the Administration. This flexibility will make possible some further aid for those local authorities which are now threatened with bankruptcy because rental income is so low they cannot meet operating expenses. Finally, this title authorizes an additional $150 million for the program of 3-percent direct loans for housing for the elderly to help meet the backlog of applications which HUD now has on hand.

Title III of the bill covers model cities and metropolitan development programs. The principal provision is the authorization to appropriate $750 million next year for the model cities program.

It also extends existing unused appropriation authority for several other programs including urban planning grants, the open space program, and water and sewer grants. It also authorizes the appropriation of an additional $100 million for water and sewer grants.

The last title of the bill covers a number of miscellaneous provisions, the most important of which is a committee amendment which would make flood insurance promptly available to property owners threatened by floods and hurricanes. The basic program enacted last year has been slow to go into effect because of the time required to set local premium rates. This bill would make it possible for property owners to buy this coverage now with Federal assistance for a 2-year period while rate studies are going on. Title IV also includes a number of perfecting amendments to farm housing programs designed to make possible substantial increase in this financing.

Mr. Speaker, this bill is generally similar to the Senate housing bill which passed that body recently—S. 2864. The basic difference is that the Senate bill covers a 2-year period while H.R. 13827 is a 1-year bill. While it is relatively small, as housing bills go, it is needed to keep our housing and urban development programs going and to perfect those programs. I urge the adoption of the rule.

Mr. Speaker, I now yield to the gentleman from Ohio (Mr. LATTA).

Mr. LATTA. Mr. Speaker, I agree with the remarks just made by my friend from Indiana.

I might say that the authorizations contained in the bill total $3,074,000,000 for fiscal 1971; $200,000,000 is authorized for fiscal 1970—the last is for increases in current programs covering housing for the elderly and those to improve and upgrade currently existing housing in low-income areas.

Of the $3,074,000,000 authorized for fiscal 1971, the major programs covered are: urban renewal, $2,000,000,000; and, model cities, $750,000,000.

The bill also makes changes in the organic law covering a number of housing-assistance programs, all aimed at making more and better housing facilities available. Among these are: First, a liberalization of FHA downpayment requirements to insure that low- and middle-income families will not be priced out of the housing market by rising prices; second, an increase in the mortgages which may be insured on mobile homes, and; third, an increase in contract authority for homeowner assistance payments to upgrade existing housing under section 235 of the Housing Act.

The committee report notes that with respect to the urban renewal programs, a backlog of requests from cities now equals nearly $2,000,000,000. The additional funding authorizations of $2,000,000,000 is necessary beginning with fiscal 1971 to continue this program. Thirty-five percent of the funds made available will be reserved for funding neighborhood development programs as opposed to downtown redevelopment.

The model cities program is authorized for fiscal 1971 at $750,000,000. At present 35 cities are receiving grant assistance and 150 more have received planning assistance. These 150 cities will soon begin to receive grant assistance under the program.

A number of programs which would otherwise expire at the end of fiscal 1970, and for which funds remain unexpended, are extended for 1 more year without any further authorizations. These include: Grants for open spaces, urban beautification and historic preservation, advanced land acquisition, grants for public facilities in new communities, and grants for the neighborhood facilities program.

The bill also extends through fiscal 1971 the existing program for grants for water and sewer facilities construction and authorizes an additional $100,000,000.

Mr. Speaker, it seems to me that this additional amount of $100 million is totally insufficient to meet the needs in this area. We debated an appropriation bill just recently where we tripled the request of $214 million for such construction to $600 million. I might observe that HUD seems to be doing a good job in allocating this fund to the areas of need and should be authorized to increase its efforts.

I think the committee should give some consideration during the consideration of this bill today and perhaps, if we go into tomorrow on this bill, to increasing this $100 million authorization substantially.

The bill adds a new provision to existing law with respect to flood insurance assistance. The Secretary of Housing and Urban Development is directed to implement the flood insurance program on an emergency basis during the 2-year period ending December 31, 1971. Insurance could be offered to flood-prone areas during this period while the long-term, permanent program is made operational. The existing flood insurance pool created by the Government and the insurance companies would be utilized. Rates would be set by the Secretary.

Finally, the bill authorizes the Federal Home Loan Bank Board to set maximum rates of interest for home mortgages on single-family dwellings in those few States which do not have statutory ceilings. This would eliminate the arbitrary 8-percent ceiling, an area that was touched upon while this bill was before the Rules Committee.

Also, there is a question of the crisis that this Nation faces in the housing industry or that part of the housing industry dependent upon conventional financing. Every Member knows that our banks and the savings and loan institutions back home do not have the money to loan to build homes with conventional financing.

Mr. Speaker, I certainly hope this great committee will give some consideration to this area of need. I have discussed this matter with the chairman of the subcommittee, the distinguished gentleman from Pennsylvania (Mr. BARRETT), and he acknowledged the tremendous need which exists here. Therefore, I hope this great subcommittee of the Committee on Banking and Currency, will give some real attention to this matter before we are faced with a recession in the housing industry.

Mr. Speaker, I say in conclusion that this resolution waives points of order against lines 16 through 21 on page 20 of the bill for the reason that a revolving fund is created and on lines 16 through 21 on page 21 and to lines 11 through 16 on page 40 for the reason that we have a transfer of funds.

Mr. MADDEN. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. PATMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13827) to amend and extend laws relating to housing and urban development, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 13827, with Mr. FLOOD in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas (Mr. PATMAN) will be recognized for 1½ hours, and the gentleman from New Jersey (Mr. WIDNALL) will be recognized for 1½ hours.

Before the Chair recognizes the gentleman from Texas, we understand the ground rules when this Chairman presides. The Chair has requested the House employees to be withdrawn from the floor, with the exception of one man from each side of the aisle. The Chair has asked the chiefs of the whips to advise those in those quarters that we want them to be quiet. The Chair expects the Members to understand that this debate will be conducted as they want it conducted. As their Chairman, the Chair expects the aisles to the right and left, which as a rule represent the most trouble, to be cleared. The gentlemen who are at the rail will also understand that we expect no undue activity there.

The Chair recognizes the gentleman from Texas.

Mr. PATMAN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the bill before us—H.R. 13827—is very important legislation and necessary to continue our programs in the field of housing and urban development through the next fiscal year. It also makes important improvements in existing law to help those programs function more effectively and help us meet our national housing goals.

Important as this bill is, it should be stated that it is not designed to be a cure-all. In particular, it is not aimed at the

most critical problem in housing today; that of high interest rates and the shortage of mortgage credit. The Committee on Bank and Currency has bills pending before it and is now conducting hearings on this extremely difficult problem and is working hard to find solutions to tight money which has forced many home buyers out of the market, has reduced home building activities sharply, and is doing serious damage to our entire economy. We will not be able to make substantial progress toward meeting the goal of 26 million additional homes over the next 10 years as set forth in the 1968 Housing Act until this fundamental problem is overcome. However, we must continue our basic programs of housing assistance for low-income families and aid to towns and cities to improve living conditions and eliminate slums. This is the purpose of H.R. 13827.

Mr. Chairman, the Committee on Banking and Currency has worked hard on the bill before us and has produced legislation which was approved unanimously by our Committee on Banking and Currency. The Subcommittee on Housing held 3 weeks of hearings on administration proposals and related bills and then considered this legislation in 5 days of executive session. H.R. 13827 embodies the subcommittee recommendations. In its executive session the full Committee on Banking and Currency generally approved H.R. 13827 and added several additional amendments. The most important of these additional amendments is the emergency flood insurance program intended to activate immediately the basic flood insurance program authorized in last year's Housing Act.

FEDERAL HOUSING ADMINISTRATION PROGRAM

Mr. Chairman, this is an uncomplicated bill which contains four titles in contrast to the 17 titles in last year's Housing Act. The first title deals mainly with the Federal Housing Administration program of mortgage insurance. It would extend until next October FHA's basic mortgage insuring authority which, under existing law, would expire on January 1. This includes both the FHA programs for lower income families and its regular programs for those in the middle-income range. While the shortage of mortgage funds has held down the level of activity under FHA, this program is basic to our efforts to meet our national housing goals and hopefully will show a rising rate of activity over the next year. This title also clarifies the authority of the Government National Mortgage Association to buy mortgages on low-income housing under FHA programs at par and resell them at market prices. This provision is designed to meet the problem of nonprofit sponsors of rent supplement and interest subsidy projects who have no resources with which to pay discounts. It is only a very limited answer to the problems posed by the point system which can only be overcome for all home buyers and housing sponsors through a reduction in interest rates and an increase in the supply of credit. However, the committee felt that it was urgent that action be taken to make par financing available for FHA programs designed especially for lower income families.

Mr. Chairman, attention should also be called to the language in the report expressing the committee's dissatisfaction with the failure of the administration to put into effect the important provision of the 1968 act authorizing the sale of mortgage-backed securities to help tap new sources of mortgage money such as pension funds. These funds now do not generally invest in home mortgages because they prefer the convenience of bond investments which have a fixed schedule of retirement without handling costs. The assets of these funds exceed $200 billion but their present mortgage holdings account for only about one-tenth of that amount. Properly implemented these mortgage-backed securities, which under the law would carry a Government guarantee, could greatly expand the supply of mortgage credit. It is important that the Department of Housing and Urban Development use this authority to provide the kind of security which will be attractive to pension funds.

Another statement in the committee report points to the availability of prompt relief in the current mortgage credit crisis through the use of existing authority for FHA and VA mortgage purposes under the special assistance program. The Government National Mortgage Association—GNMA—created by the 1968 Housing Act has $2 billion authorized by the Congress to aid housing programs through mortgage purchases, particularly the highly successful program of 3-percent loans for rental and cooperative housing for moderate income families. The Secretary of Housing and Urban Development has stated his desire to stimulate housing construction and meet our housing needs. One step that he could take immediately to accomplish that would be to put these funds to use.

URBAN RENEWAL AND PUBLIC HOUSING

Title II of the bill covers the urban renewal program and public housing. The bill would authorize an additional $2 billion for urban renewal for fiscal year 1971. This is urgently needed in view of the fact that we already have a backlog of applications of approximately $2 billion; new applications of about $2 billion, and new applications are still coming in at a high rate. Your committee felt that this was the minimum amount needed to take care of both the pressing needs of larger cities and assure that adequate funds will be available for our smaller towns and cities. The bill does not provide for any additional units of public housing since existing authorization is sufficient to carry that program through next year. However, it does provide $20 million in annual contribution authority to be used for the rehabilitation of older projects. Some of these projects are now 30 years old and others were built shortly after World War II when shortages of material hampered construction. Improvement of this housing will give it a new lease on life so that it can continue to serve low-income families.

This title also includes an additional $150 million for the very successful and popular program of 3-percent loans for housing for the elderly. When the administration allowed this program to run out of funds this spring it had on hand $200 million in applications and additional sponsors were in the process of preparing further applications. HUD told these sponsors that in the future they would have to use section 236 interest subsidies. In enacting section 236 last year it was contemplated that it would eventually replace direct loan programs but only when it was put in full operation and adequately funded. This has not yet happened and in view of the shortage of assistance funds and the tremendous need for housing for the elderly and other low- and moderate-income families, it is important that we make full use of all of our programs in this field.

The committee heard many complaints that the complexity and higher costs of FHA section 236 housing would block efforts to provide these units for older people at rents which they could afford. The committee therefore added this additional authorization and in view of the present upward pressure on construction and land costs and the lack of alternative mortgage financing, it is important that the Department make them available promptly for senior citizen housing.

MODEL CITIES AND METROPOLITAN DEVELOPMENT

Mr. Chairman, title III of the bill covers model cities and metropolitan development. It would authorize the appropriation of $750 million for model cities grants in fiscal year 1971. This is the amount requested by the previous administration for the current fiscal year. That request was reduced 10 percent by the present administration and the House-passed bill has made a further reduction—to $500 million. The model cities program is intended to concentrate the full range of existing programs for housing, health, education, and job training in neighborhoods of greatest need. Already 150 cities have been approved for planning under this program and more towns and cities are making application. These funds will make it possible for them to carry out their programs.

The bill also has an amendment to the model cities program reflecting the experience gained so far in the planning phase. Many smaller communities have seriously blighted areas in need of the model cities program. However, many small towns cannot usefully employ the large number of Federal grant programs used in larger cities, and, since existing law limits model city grants to 80 percent of the local share of the cost of Federal programs being used, their communities do not have an adequate base for meaningful model cities grants. In order to enable them to receive the full benefit of the programs, the bill would provide that up to 10 percent of the funds made available for these grants could be used in smaller towns without being bound by this formula.

Other provisions of title III would extend for 1 year a number of programs for

which additional funds are not needed. These include the comprehensive planning program, open space, urban beautification, and the historic preservation program and the supplement grants for public facilities and new communities.

This title would also extend for 1 year the present authorization for water and sewer grants and would add $100 million to the amount which could be appropriated for this program. It is highly regrettable that the water and sewer program has never been fully funded because this is one of the most urgent needs of communities throughout the country. Hopefully increased funds will be appropriated for these grants so that we can begin to make inroads on the tremendous backlog of need in this field.

FLOOD INSURANCE AND RURAL HOUSING

The fourth, and last, title of the bill includes two very important sections. The first is designed to make federally aided flood insurance promptly available to property owners. The 1968 Housing Act authorized a new program to make flood insurance available to homeowners under a partnership between Government and private industry. The private insurance companies have responded well to this permanent program which calls on them to pledge capital against the possibility of disaster losses. However, that program has a technical problem because this private participation depends on the establishment of precise actuarial premium rates for each community and for different parts of these communities depending on the risk involved.

The committee was deeply concerned to hear that now, 1 year later, this insurance so badly needed in areas exposed to flooding and hurricanes is available in only three places in the entire country. The committee therefore adopted an amendment authorizing the Department of Housing and Urban Development to make this insurance available promptly for a 2-year period with losses during that time to be borne by the premium payments paid by property owners and Federal payments as needed. Meanwhile the actuarial studies, for which Congress has already appropriated funds, will be carried out and at the end of that time the permanent program will take over.

Another very important section in this title is designed to expand and improve our existing programs in the field of rural housing. While the spotlight is usually on urban slums and blight, the fact is that more than half of the substandard housing in the country is in rural areas. There is an urgent need to increase our efforts to improve this part of our housing supply and the administration is to be complimented for its stated desire to nearly triple the volume of mortgage financing to be made available through our farm housing programs. Unfortunately, the problem of high interest rates and tight money is blocking that effort which is essential to the achievement of our national housing goals. The committee bill contains several provisions designed to help accelerate the construction and financing of farm housing.

Under the present program mortgage loans in rural areas are originated by the Farmers Home Administration through its housing insurance fund and these loans are then sold to private investors so that the funds can be used again for additional loan originations. The tight money problem has made it nearly impossible to sell this paper and the Farmers Home Administration has requested an increase in the limit on its housing insurance fund. The committee has done this by an amendment which combines the Farmers Home Administration direct loan fund with the housing insurance fund to permit further loan originations. It has also included an amendment to permit Farmers Home Administration to sell its loans in blocks attractive to large investors instead of the present system of selling them one by one. This provision should make these insured loans more readily marketable. The committee report also points out that its present authority in the law for the Government National Mortgage Association to purchase these insured loans under the special assistance fund, which already has ample authorization, the administration should act promptly to activate those funds to make them available to rural home buyers who always suffer greatest in periods of tight money. Finally, this section removes the 5,500 population ceiling on areas in which Farmers Home Administration can operate. This provision is designed to give flexibility to the program but the committee expects that the agency will continue to direct its efforts to farm housing and smaller communities which are rural in nature.

Mr. Chairman, H.R. 13827 has been carefully thought out by the committee with full participation of all of its members to meet immediately pressing needs in housing and urban development. Right now the agencies of the executive branch are working on their budget proposals for the next fiscal year and it is important that the House pass this bill so that they will know the authorizations and legislative law and intent under which they will be operating. It is not a controversial bill in view of the unanimous vote in the committee and I urge all of my colleagues to support it.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I will be glad to yield to the gentleman.

Mr. GROSS. I am intrigued by the training and fellowship program as set forth in this bill. What does a fellow do in contributing to the model cities program? And I assume that is what is referred to.

Mr. PATMAN. The information is available to all of the Members in the committee report. It has been furnished to all Members.

Mr. GROSS. Does the gentleman happen to know what kind of price tag there is on this fellowship program?

Mr. PATMAN. No, sir. I am afraid I cannot give you the information on that. Of course, the Committee on Appropriations goes into all of those details before the money is appropriated and after this authorization is made. I would ask the gentleman to wait until the debate is over and, if he does not get the answer, I will try to answer it.

Mr. CARTER. Mr. Chairman, will the distinguished gentleman yield?

Mr. PATMAN. I yield to the gentleman.

Mr. CARTER. I am intrigued by a recent statement in the Washington Post to the effect that priorities are set by Mr. George Creel, Director of Public Affairs of the Department of Housing and Urban Development, and Mr. Jack Wooley, whereby certain Members' mail received priority by the Department of Housing and Urban Development. I would like to ask the distinguished chairman if he agrees with the decision made by Mr. George Creel.

Mr. PATMAN. We have nothing to do with that, and since it is the gentleman's administration that is in power, I would suggest you make inquiry direct to them.

Mr. CARTER. Of course that is quite true, but there are many more Members of the distinguished gentleman's party on the list than there are mine.

Mr. PATMAN. That was a decision that was made without consultation with the chairman of this committee or any member thereof, to my knowledge, and by the gentleman's own party. I suggest he ask them directly.

Mr. CARTER. I should say, in that case, if such priorities are approved by him, I would think that the distinguished chairman would depend on those 70 Members so favored by the Department for their votes on this bill.

Thank you, sir.

Mr. PATMAN. I am not acquainted with it.

Mr. GONZALEZ. If the gentleman will yield, I will try to fill in a little bit for the gentleman's edification.

Mr. PATMAN. I yield to the gentleman.

Mr. GONZALEZ. I think that the newspaper article the gentleman refers to was published here in Washington, D.C.

Mr. CARTER. That is right.

Mr. GONZALEZ. And it talked about some priority Members in reference to HUD programs?

Mr. CARTER. That is quite right.

Mr. GONZALEZ. I think most of those listed were Members on both sides who were members of the Housing Subcommittee, Banking Committee, and Appropriations Committee.

Mr. CARTER. Not entirely.

Mr. GONZALEZ. Most of them were. I was one of the names mentioned, and I was very pleasantly surprised. As a good Democrat I do not like privileges, but I thought it was good, except that when I checked with the Secretary of Housing and Urban Development, he told me that my priority would be 72 hours on any announcement after the Senator from my State, who belongs to the gentleman's party, would get first notice. That is rather strange privileged priority, I think. I am willing to switch that priority if the junior Senator from Texas will agree to let me.

Mr. SLACK. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 237]

Arends	Eshleman	O'Konski
Ashley	Fascell	Passman
Bingham	Findley	Powell
Blackburn	Foley	Purcell
Brooks	Fraser	Quie
Burton, Utah	Frelinghuysen	Reid, Ill.
Cahill	Garmatz	Reid, N.Y.
Carey	Hansen, Wash.	Riegle
Chamberlain	Hays	Rivers
Chisholm	Holifield	Rodino
Clancy	Howard	Scheuer
Clark	Jones, N.C.	Sikes
Clausen, Don H.	Jones, Tenn.	Sisk
	Karth	Skubitz
Clay	Kirwan	Taft
Corman	Landrum	Teague, Tex.
Culver	Lipscomb	Ullman
Dawson	Long, La.	Utt
Denney	McCarthy	Van Deerlin
Dent	Martin	Vanik
Devine	Meskill	Watts
Diggs	Mills	Whalley
Dingell	Monagan	Wilson, Bob
Dorn	Morse	Wilson, Charles H.
Downing	Morton	
Edwards, Ala.	Murphy, N.Y.	Wolff

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FLOOD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 13827, and finding itself without a quorum, he had directed the roll to be called, when 355 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. At the time of the call of the quorum the gentleman from Texas (Mr. PATMAN) had consumed 23 minutes.

The Chair recognizes the gentleman from New Jersey (Mr. WIDNALL).

Mr. WIDNALL. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I am speaking here today in support of the Housing and Urban Development Act of 1969, H.R. 13827. While this bill has been characterized as noncontroversial and was referred to the Congress by a vote of 35 to 0, the committee report does include dissenting views.

The thrust of this bill goes toward extending the authority for essential programs such as that of FHA. It provides for a large increase in the authorization for the model cities program and that of the homeownership subsidy program.

In the past, the Department of Housing and Urban Development has received one new program after another from the Congress, with the end result that program competition and bureaucratic difficulties have become the rule rather than the exception.

There should be a full and adequate debate on the merits of the substantive amendments within this bill.

An open and full debate is the only way the Congress can provide the full understanding of the housing laws. This is much needed. It will be constructive and do much to aid executive interpretation of congressional intent.

In helping that portion of the Nation that is ill-housed, we must enact legislation that does not come back to haunt us. Presently, the tight monetary situation has so worked to our disadvantage that we have reached the point where our desire to aid has outstripped our ability to do so.

We have created since 1964 a myriad of programs. Some have worked, others have not. We are faced with such things as a choice between housing people and building units for the goals set in the preamble of the 1968 Housing Act. Successful programs are paradoxically being curtailed because they are successful. The money is needed elsewhere for a restricted group.

I cite these matters only because I think they should be fully explored.

The 1969 housing bill, made up of many technical changes in ongoing programs, comes at a landmark time in our efforts to adequately house the Nation. Yet the bill can hardly be called "landmark legislation."

There is a good reason for this. Never before in the history of our country have the traditional and fundamental doctrines and institutions been so severely challenged. Never before has the Nation felt so unsettled about the future, and yet seemingly certain that we will continue to grow faster and faster. The "inflation psychology" that persists in the land, that President Nixon so forcefully spoke about last week, is taking an especially heavy toll on housing, as we all know.

Root of the problem, of course, is that our housing and urban development policies have relied, all these years, on existing financial institutions and existing financial conceptions of security. The mortgage loan, secured by land, has always been properly regarded as the most secure of securities.

Recently, the Commission on Mortgage Interest Rates delved into these problems. I commend that report to those who want to know more about these problems. We shall have more discussion about them in the future. That Commission quite properly identified inflation as the chief cause of our housing problems.

I mention the inflation problem in the context of today's housing bill because we are not yet attempting to transform major policies and procedures into inflation-tailored legislation. It would be easy, for instance, to attempt to reshape some of the fundamental principles that lie beneath our national housing policies, to make them more responsive to inflationary situations.

There is one such example in this bill, a minor example and one that is highly experimental. I do not oppose it, because it will be very limited in scope if the administration follows the direction of Congress and limits its use to only certain subsidized programs. I refer to the special assistance mortgage purchasing provisions pertaining to "Ginnie Mae" and "Fannie Mae."

This provision, section 111 of the bill, would allow the Government National Mortgage Association—part of the Government—to buy a mortgage at par and then immediately sell it to the Federal National Mortgage Association—now no longer part of the Government for budgetary purposes—at a slightly different price, below par.

By buying the mortgage at less than par, Fannie Mae will make more money over the long run. Its credit facilities, unfettered by budgetary constraints, would be substituted today for Ginnie Mae's, except for the difference between par and the purchase price—the so-called points.

These "points" would be directly subsidized by the Federal Government, an outright subsidy to the mortgage bankers that can never be recovered. Originally, Ginnie Mae's special assistance program was designed to have the Government buy the mortgages and then hold onto them, figuring that in time, market rates would fluctuate so that the eventual cost to the Government might be washed out. This new concept of section 111 ends all hope of recovering the taxpayer's money paid out for "points."

The amount of money involved will not be vast, however, since this novel situation can be limited to its most desirable social uses—the 236 and 221(d)(3) rent supplement programs. If Ginnie Mae uses this authority beyond those social limitations, however, then grave questions of overall economic policy would arise. Federal subsidy for all "points" involves national policies that go beyond what's contemplated in this bill.

If, on the other hand, this system can be shown to work successfully for the 236 and 221(d)(3) rent suplement multifamily programs, where the need is greatest, then perhaps it could be expanded to other homeownership plans, in coming years.

Federal subsidy of points at this stage is no cure for the problems besetting our housing and urban renewal effort. These problems arise only because our economy is hampered by the "inflation psychology" that remains all too rampant. Subsidizing "points" will not alter that course; as a matter of fact, it could aggravate the inflation problem if this program was expanded to more than the partially subsidized multifamily programs.

Another section of this bill speaks to that overall mortgage finance problem, in todays' inflationary condition. I refer to section 414, extending the authority of the Secretary of Housing and Urban Development to set the maximum FHA-insured interest rate in such a way as to be responsible to market conditions. Even here, what with State usury laws crowding into the economic facts of life, the solution lies within the total economy rather than changing rates all the time.

Thus, while this bill is very worthwhile and strives toward laudable goals, it cannot and does not strike at the most important housing issue of all, the issue of inflation.

There are other matters that disturb me about this bill. The commitments, large though they be, to the public housing and urban renewal programs offer temporary, but not permanent solutions. The Congress must come to grips with these programs and, reaching the full understanding of the problems involved

work toward solutions that produce something more than the increasing appropriations which in large part go to the bureaucracies rather than the people.

There are other imperfections of the bill that disturb me and to which I would like to give greater attention. For example:

Section 108 moves up the percent of existing housing that may be used for section 235 housing. It is not needed. HUD is already utilizing existing housing for 235 and 236 contracts at a 43 percent level, expects to level off sometime in the future. If it can do this now, it does not need the increase. The Department will also be more inclined to move toward the construction of new housing which was by far the main thrust of the program if it does not have the loose permissiveness of the amendment. To allow the Department to use a greater percentage of existing housing for its purposes will only defeat or slow the efforts to reach the 10-year goals and their promise of new construction. Placed in competition with other HUD programs such as the section 23 leased program, specifically designed to use existing housing, and which can do the job just as well and perhaps better, section 235 only duplicates a function already well performed.

Section 301: While we have no objection, and think consideration should be given to smaller cities, I would like to make this observation.

What is a smaller city? The bill gives no definition and we think there should be established, by legislative understanding, some rule in that connection. Otherwise, we are apt to find that cities of under a million population are considered smaller cities because they are smaller than New York, Chicago, Los Angeles, and Philadelphia.

Section 411: This section removes the 5,500 population limit on areas eligible for Farmers Home Administration programs. While we favor the general thinking behind this provision, it is a case of upping sail to the limit and cutting the anchor loose entirely. There are towns of as much as 25,000 in population that are largely rural in nature and serving nothing but rural areas. There are also as small or smaller than 500 which are nothing more than adjuncts to sizable metropolitan areas, or specially created urban municipalities of special purpose. The definition now on the books needs revision. But this provision would turn the Farmers Home Administration loose on the entire Nation, lend confusion to its operation and those of the FHA with whom it would immediately be in competition. The FHA has all it can do to handle its present operations. We should not burden it with such an expansion of its sphere of activity until we can give more attention to defining that sphere of activity.

Mr. ZWACH. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Minnesota.

Mr. ZWACH. I thank the gentleman for yielding. I refer the gentleman to the bottom of page 20 of the committee report, where the following statement appears:

> The Census Bureau projections for 1970 and other studies indicate that there are a total of 5.9 million substandard housing units in the nation and that 4.2 million of them—more than two-thirds—are in rural areas.

In the countryside areas of our country. Then I refer to page 24, the middle of the page, where it is stated that as of December 31, 1967, only 3.23 percent of the funds of HUD have gone into the rural area. It seems to me that this is an intolerable situation.

What does the committee recommend in relation to this matter? Will that situation be improved so that countryside housing will be receiving proper consideration?

Mr. WIDNALL. Within the bill there are sections that will prove very helpful in rural areas. What I would like to point out to the gentleman, however, is that the crying need for some priority, I believe, is in the central city areas, the hard-core areas, the ghetto areas of the country, where some extremely serious problems exist and where we have got to do better than we have been doing in the past. If we do not, the entire country is going to explode. We have had some taste of that.

Mr. ZWACH. Mr. Chairman, would the gentleman agree that part of the city problem is this problem in countryside America, and unless we have decent housing there ultimately the problem will come to the cities?

Mr. WIDNALL. I would say that is part of it. On the other hand, the failure of many States to adequately provide for the poor family with some assistance and some relief has caused the migration into the cities.

Mr. STEPHENS. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Georgia.

Mr. STEPHENS. I appreciate the gentleman yielding.

Mr. Chairman, I agree with the statement the gentleman is making. In a few minutes I am going to ask for time to have the opportunity to explain what we are trying to do in this field for the farmer in the Farmers Home Administration, because I am vitally interested in it, too.

Mr. ZWACH. Mr. Chairman, if the gentleman will yield further, I would like to say to the gentleman that as I go through the report, I believe the committee has made some very commendable suggestions and amendments that are going to help bring housing to rural areas. I commend the gentleman and the chairman of the committee and the committee for their efforts.

Mr. Chairman, the lack of decent housing and new housing available for the citizens in our rural areas has reached the threshold of a national crisis. Time is of the essence that housing of all types, single and multifamily, be made available. Today, the pressures on our metropolitan centers in the field of housing is catastrophic, and the end is not in sight. Are we now to have the same thing happen in rural America? Are we going to wait until it is too late before action is taken in solving the rural housing problem? It is my belief that we might be able to eliminate the pressures on our metropolitan cities if adequate housing was available in rural America. We must make available all the means we have to somehow eliminate the housing problems of our Nation. I am in favor of section 411, subsections (a) and (b). By extending for 1 year the various housing authorities which would otherwise expire, and by removing the $100 million ceiling applied to the amount of unsold insured mortgages that can be held at one time by the Secretary of Agriculture, I believe we are moving in the right direction. I implore my fellow colleagues to vote in favor of these amendments.

Mr. PATMAN. Mr. Chairman, I yield 15 minutes to the gentleman from Pennsylvania, the chairman of the subcommittee (Mr. BARRETT).

Mr. BARRETT. Mr. Chairman, this country has set an inspiring goal for itself: The complete elimination of substandard housing over the coming decade. The achievement of this will require the production of 26 million homes through new construction and rehabilitation, a substantially larger total than in any decade in our history. Moreover, our goal calls, not only for a decent home, but also for a suitable living environment for every American family. This will require the full use of not only housing programs but of the full array of community development programs including public works, public buildings, transportation, open space, health and educational facilities, and others.

Mr. Chairman, it is a bitter fact that today in the midst of the greatest prosperity ever known by any nation in history, 6 million American families still live in substandard housing. Millions more live in housing which is physically adequate but which is located in blighted neighborhoods or which lack the public facilities that most of us take for granted. This includes not only the intolerable conditions in big city slums but the blighted areas in smaller towns and millions of homes in rural areas. The disturbances in our cities have warned us that we must not let our housing programs be shouldered aside by other expenditures. We would not be keeping faith with our men in Vietnam if we failed to do our utmost to provide decent homes and neighborhoods for them to return to. Our own consciences cannot rest easy if these problems fail to get the priority which they deserve.

Mr. Chairman, this bill is vital to keep our housing programs going through next year and to make those programs more effective and more helpful to low- and moderate-income families and to our towns and cities. It is not a major bill on the scale of those in 1961, 1965, 1966, and 1968, and I believe it will not be controversial. After careful consideration it was agreed to unanimously both in the Subcommittee on Housing and in the full Committee on Banking and Currency. Members on both sides of the aisle have their names on this bill and I believe it is one in which we can all take pride.

The distinguished chairman of the Committee on Banking and Currency has already given an overall description of the major features of the bill. I would like to highlight some of the particular provisions of special importance.

One of the most important provisions in the bill is the authorization of an additional $2 billion for urban renewal grants. This represents a modest increase over the $1,750,000,000 authorized for the current fiscal year. These grant funds are needed to cover the whole range of renewal activities including the conventional urban renewal program, code enforcement, neighborhood development program, interim assistance, home rehabilitation grants, and the several kinds of relocation payments. Of particular importance at this time is the provision in the bill which reserves a minimum of $400 million in the current fiscal year and 35 percent of the funds in the next fiscal year for neighborhood development programs. This important provision in the 1968 act was designed to provide for flexible planning of large projects, improved relocation of displaced families and business firms, and avoidance of the problem of tying up large amounts of grant funds for long periods which often happened in large projects under the conventional system. It is highly regrettable that the administration has proposed regulations to nullify the NDP program by restricting it to projects which can be completed in 2 years and in which 80 percent of the Federal aid will be used in the first year. NDP was never designed for these relatively small short-term projects which do not have the planning, relocation, and funding problems of larger undertakings.

The committee bill would not only assure funding for NDP programs under the amounts set aside but also includes a very important amendment offered by our distinguished colleague, the gentleman from Ohio (Mr. ASHLEY), which would modify the NDP program to give cities more assurance of funds to carry out their programs and provide a more reasonable time period for carrying out operations.

Under existing law grant funds are available for only a 1-year action period of an NDP program and HUD can earmark the funds expected to be needed for a second year. Many cities have found that this is too short a period for carrying out these activities and the committee bill would amend NDP to provide for a 2-year action period for which actual grant funds would be made available and an additional 2-year period for which funds would be reserved to assure the city of continuity in its programs. In my opinion this amendment is highly desirable and in fact essential in view of recent statements from the Department.

Another provision in the bill which has been sought by many Members would extend for 1 year the eligibility of noncash grant-in-aid credits under the urban renewal program. The committee received many reports from communities which had chosen to convert urban renewal projects to the neighborhood development program at the urging of HUD only to find that NDP funds were not available this spring and they were faced with unexpected delays. Other communities are threatened with the loss of these credits simply because of the huge backlog of applications which is imposing a delay of more than a year on these projects. These credits are essential to the operation of the urban renewal program because they are needed by the cities to meet their share of urban renewal cost. Therefore, the committee bill would extend from 3 to 4 years the eligibility period for noncash credits for applications pending on date of enactment. This provision seemed particularly justified in view of the fact that in 1959 when the 3-year period was established, the backlog of urban renewal applications amounted to only $185 million, well within the level of annual authorizations. Now that backlog has grown to $2 billion and this amendment is needed to account for the unforeseen waiting period.

Mr. Chairman, the committee bill would also remove the controversial income ceiling on the section 312 rehabilitation loan program. This very valuable program of 3-percent loans, which was authored by the distinguished gentleman from New Jersey (Mr. WIDNALL), has made it possible for many homeowners and small business firms in urban renewal areas to improve their property which might otherwise have had to be torn down. While these loans are available only in slum and blighted areas and therefore involve mainly low-income families, the ceiling imposed by the 1968 act has caused difficulty in a number of places. In particular, it has virtually ruled out their use to improve rental housing. Since the loans can be used only to improve property which the city has ordered to be rehabilitated because it does not meet urban renewal or code enforcement standards, I feel that we have an obligation to these owners to provide some assistance in financing the improvement. In view of this the committee bill would repeal the income ceiling but retains a priority for applications for low- and moderate-income families.

The committee bill would also make a modest increase in the rehabilitation grants available to low-income families in urban renewal areas who must fix up their property. HUD reports that 60 percent of these grants have gone to elderly homeowners who might otherwise have been forced to move because their incomes are so low they simply could not afford the needed rehabilitation. The committee bill would increase the maximum amount of these grants from $3,000 to $3,500.

Mr. Chairman, the committee bill contains another very important provision to help our senior citizens. That is the authorization of an additional $150 million for the program of 3 percent loans to finance housing for the elderly and the handicapped. When this highly successful program exhausted its authorization earlier this year, the Department had applications in process totaling approximately $200 million. While some of these projects might be served by the section 236 interest subsidy program, there is not sufficient money in that program to meet all of the needs of low and moderate income families generally as well as housing for the elderly and it is important that we continue the section 202 loans to provide good housing at modest cost for the retired men and women who in their working years built up this great Nation of ours.

The bill also contains an urgently needed modification of the public housing annual contribution formula which was requested by the administration. This provision would restore the authority in the original 1937 Housing Act to make contributions up to an amount set by a formula reflecting the cost of money to the Treasury. By regulation these contributions have always been limited just to debt service on public housing projects but a growing number of local authorities find that they are not now able to meet operating costs out of rents. Over the years, management costs of public housing have risen along with other costs in our economy. In contrast, the average income and rent-paying ability of public housing occupants has remained virtually stationary as this program has come to serve a lower range of income groups, particularly a growing number of elderly families.

Secretary Romney testified that housing authorities in 15 cities are now running deficits and HUD should be permitted to make some use of this flexible authority. The result has been that some authorities have had to turn away very low-income applicants because the rents they could pay would be so low that they would threaten the solvency of the whole local program. This flexibility is needed to carry out the intent of the 1937 act which stated that contributions were to be made "to assure the low-income character of the project."

Mr. Chairman, one of the most difficult problems which confronted the committee was that of the pressure of rising land and construction costs on the per unit dollar ceilings on FHA programs and on public housing. In both subcommittee and full committee this received careful and thoughtful study and I realize that is a problem on which we could not satisfy all points of view. In the case of FHA the committee bill would increase maximum mortgage amounts per home and per apartment by 10 percent over existing dollar ceilings. For example, the maximum mortgage on a single family home under FHA's basic mutual mortgage insurance program would be increased from $30,000 to $33,000 and the maximum mortgage under the section 235 interest subsidy program for a large family in a high cost area would be increased from $20,000 to $22,000. Similar increases are provided for the per unit limits on rental housing programs.

The committee received evidence that construction cost increases, since the last adjustment in these ceilings, had been even larger than the 10 percent provided for in the bill, but we felt that in a time of a serious shortage of mortgage money that it was not desirable to go beyond this figure because of the tendency of builders and lenders to move up toward the maximum amounts. To carry out the purposes of our national housing goals it is desirable that funds available for FHA mortgages should be directed toward housing within the reach of low- and moderate-income families. In the case of public housing the committee provided a 10-percent increase in the basic

per room limit of $2,400 and a 10-percent increase in the additional $750 provided for in existing law for high cost areas. This is approximately the increase sought by the administration. Undoubtedly, these increases will not meet all of the cost problems in some areas, but again the committee was concerned with the tendency for all projects to come in at, or close to, the ceiling amounts.

Finally, Mr. Chairman, I want to compliment our distinguished colleague, the gentleman from Rhode Island (Mr. ST GERMAIN), for his amendment to the flood insurance program which cuts through redtape and technicalities to make that important protection promptly available to those who need it while the detailed studies of the permanent program are being carried out. I also want to add my voice to that of the chairman of our committee in urging HUD to make use of the $2 billion available to them now in the GNMA special assistance program to help overcome the critical problem of tight money which is hitting hardest at the home building industry and the low- and moderate-income home buyer. The committee received testimony that we are faced with an increasingly serious housing shortage which is inflating home prices and rents. The administration has available to it funds to meet this kind of inflation and at the same time help meet the national housing goals set forth in the 1968 act.

Mr. Chairman, H.R. 13827 would make a number of important improvements in our existing programs and provides authorizations essential to the continuation of these programs through the next fiscal year. In view of its bipartisan authorship and its unanimous approval in the committee, it is not a controversial bill. It is regrettable that it is late in coming to the floor but, of course, we had to give the new administration time to shape up its proposals and our hearings began 2 days after the administration bill was received. It is important now that we work for its prompt enactment to meet the critical problems in housing and to enable the administration to make its plans for next year's budget and housing proposals. I urge all of my colleagues to support this bill.

Mr. ST GERMAIN. Mr. Chairman, will the gentleman yield?

Mr. BARRETT. I yield to the gentleman from Rhode Island.

Mr. ST GERMAIN. I would like to commend the gentleman from Pennsylvania, the chairman of our subcommittee, not only for his splendid statement but also for the manner in which he stewards our committee and shows an understanding of the problems and an awareness of the fact that this is a changing piece of legislation; it has to be alive, and it has to change with the times.

I believe the gentleman from Pennsylvania will recall that during our hearings, and in executive session, there was a discussion of a problem of regulatory cost limits on housing for the elderly, particularly on units already authorized for which bids have come in too high. I wonder if the gentleman who is chairman of the Subcommittee on Housing would give us his comments on that problem.

Mr. BARRETT. The gentleman from Rhode Island is perfectly correct and I recall well that he raised this point with the subcommittee. Because cost ceilings for the section 202 housing for the elderly program are not set further in the statute, the law was not amended to provide any precise increase. However, the committee's action in increasing cost limits for FHA mortgage insurance and for the public housing program clearly indicate recognition of this problem and the committee's intent to take steps to meet it. The administration itself proposed a substantial increase in the cost limits on public housing which demonstrates their awareness of the problem and I would expect HUD to be consistent and take the necessary administrative action to recognize increased costs in the case of housing for the elderly. This is one of our most successful and popular programs and it would be shortsighted indeed to deny this housing to our senior citizens from administrative inertia. I fully support the viewpoint of the gentleman from Rhode Island.

Mrs. SULLIVAN. Mr. Chairman, will the gentleman yield?

Mr. BARRETT. I yield to the gentlewoman from Missouri.

Mrs. SULLIVAN. Mr. Chairman, as the ranking member of the Subcommittee on Housing, I want to congratulate the chairman of the subcommittee, the gentleman from Pennsylvania (Mr. BARRETT), for the tremendous interest he has always demonstrated as a Member of Congress and as a member of this committee in the housing laws of this country and in the housing needs of the American people.

I was interested in learning the other day from a broadcast of Joseph McCaffrey over WMAL that the gentleman from Pennsylvania was responsible back in 1949 for the declaration in our housing laws that it is the obligation of the United States to assure a "decent, safe, and sanitary home for every American family"—a goal we reaffirmed in the 1968 act. And the gentleman from Pennsylvania (Mr. BARRETT) continues to work diligently and sincerely for the achievement of this goal.

Mr. Chairman, Joseph McCaffrey in his broadcast over WMAL Friday, August 29, 1969, in his "Meet the Member" series spoke of our colleague, the gentleman from Pennsylvania (Mr. BARRETT). Mr. McCaffrey in his customary fine way described the kind of person Mr. BARRETT is and the kind of Member of Congress he is and the kind of chairman he has been of the Housing Subcommittee. Mr. McCaffrey said, and I am reading from the script:

MEET THE MEMBER

(By Joseph McCaffrey, as broadcast over WMAL Washington on Friday, August 29, 1969)

William A. Barrett of Pennsylvania is becoming known in the House of Representatives as "Mr. Housing." He is an expert on housing and is Chairman of the Banking and Currency's Housing Subcommittee.

Housing is the Philadelphia member's main legislative concern. He was responsible for the declaration in a 1949 floor action which declared for a "decent, safe and sanitary home for every American family," this later was re-affirmed as a goal in the 1968 housing legislation.

Six million Americans, the Philadelphia Democrat points out, live in substandard housing. As the Chairman of the Housing Subcommittee, Congressman Barrett has labored both in the Banking Committee, and on the floor of the House to correct this inequity. He points out that poor housing in a city is much like a cancer, the crime it encourages, the disease it breeds, the problems it causes, all infect the other areas of a city. Better housing, the Congressman feels, is a goal which the nation must strive for.

"If we can house our citizens adequately," he feels, "then we will do much to curtail our other social problems."

The Congressman has also worked actively in support of small business. He has long advocated loans to those with executive ability so as to create employment.

His main objective in the Congress has always been to protect working people and support labor legislation. He tells about his long fights to provide supplementary incomes for the underpaid and obtain better working conditions for federal employees. He is especially active in the fight to protect federal employees from having their installations moved out from under them. Congressman Barrett has long pushed for a computerized system to store data on defense allocations.

"In this way," he points out, "We will learn what is spent for what and where it is spent. And we can find this out at a moments glance."

The Congressman attended Brown Preparatory School and St. Joseph's College in Philadelphia. He is a real estate broker and has been long active in political life. He was first elected to Congress in 1944. But two years later he was one of those surprised by the Republican landslide of 1946, which gave the Republican Party control of the House and Senate for the first time since the days of Herbert Hoover. Two years later Congressman Barrett made a comeback, sweeping into office. He has never been seriously challenged since that time.

He commutes to Washington from Philadelphia, working a part of almost every day in his district office, interviewing as many as 750 people a week. His district office is open almost around the clock.

When there is a ten o'clock committee meeting here in Washington he leaves Philadelphia at seven o'clock in the morning.

All in all the Congressman averages about four to four and a half hours sleep a night, but he has been working at this pace for his full forty years of public life. Prior to having been elected to Congress he served as an official with the Public Works Administration, and it was there that he developed the wide following that later encouraged him to seek elective office.

That's the gentleman from Pennsylvania's first district, William A. Barrett.

(Mr. ANNUNZIO (at the request of Mr. BARRETT) was granted permission to extend his remarks at this point in the RECORD.)

Mr. ANNUNZIO. Mr. Chairman, I rise in support of H.R. 13827, a bill to amend and extend the laws relating to housing and urban development. This bill was reported out of the Banking and Currency by a vote of 35 to 0. Needless to say, it is a very important piece of legislation and very necessary if we are to continue our programs in the field of housing and urban development through the next fiscal year. It makes a number of important changes in existing law to help these Federal programs function more effectively.

Briefly, the bill would extend the Federal Housing Administration's mortgage and loan insuring authority to October 1, 1970, and also extends the various programs aided by the Farmers Home Administration also to October 1, 1970.

H.R. 13827 authorizes $2 billion for the very important urban renewal program for fiscal year 1971, and earmarks approximately one-third of these funds for the neighborhood development programs which are very important for large cities, such as my hometown of Chicago, for carrying out their ambitious urban renewal plans. It also provides a set-aside of $400 million for the NDP program for this present fiscal year. Another important part of the urban renewal section of the bill would extend from 3 to 4 years the eligibility period for noncash grant and aid credits under the urban renewal program. It would also remove the existing income limitation on section 312 rehabilitation loans. Many of our cities have found this low-interest, direct loan program to be very beneficial in rehabilitating existing structure within the urban renewal and code enforcement areas.

Probably one of the most important provisions of this bill would authorize a higher level of annual contributions under the public housing program by permitting the Department of Housing and Urban Development to use the full formula originally provided in the 1937 act in place of the present limitation to debt service. This provision would give many of our large public housing authorities additional amounts of money to meet the increasing costs in running these projects.

H.R. 13827 would authorize the appropriation of $750 million in fiscal year 1971 for the model cities program and authorize the use of 10 percent of the funds in smaller cities without the limitation based on local share of costs of other programs. The bill would also extend for 1 year the present authorization for a number of vital programs including comprehensive planning, open spaces and water and sewer grants. There is an additional authorization of $100 million for the water and sewer grant program.

An emergency flood insurance program would be made available immediately under this bill for a 2-year period during which local actuary studies will be conducted to provide a basis for the permanent flood insurance program.

A number of changes have been made in the housing programs under the Farmers Home Administration to increase the volume of insured loans available in our rural areas.

I had hoped that when the housing bill was considered by this body that my bill, H.R. 13666, which would provide needed changes in the urban property protection and reinsurance legislation, would be a part of the bill before us today. I did not offer my legislation as an amendment to this bill because the distinguished chairman of the Housing Subcommittee, the gentleman from Pennsylvania (Mr. BARRETT), most graciously consented to hold hearings on my bill later this month or in early November. Since I did not want to hold up the housing bill while consideration was given to my legislation, Mr. BARRETT's solution to the problem was most acceptable.

Basically, H.R. 13666 would, first, allow the Federal Government to write direct insurance if the charge for such insurance in the private market exceeded 175 percent of the standard premium; second, provide insurance agents and brokers with a commission that is realistic in terms of other premium commission; third, provide for reinsurance of losses that occur during the construction or rehabilitation of habitational property; fourth, eliminates State sharing in riot loss payments; fifth, establish an Office of Review and Compliance in HUD to oversee the insurance program; and, sixth, provide for Federal guarantees for performance bonds for small business construction contractors and subcontractors.

I am hopeful that in the near future the Members of this body will be able to vote on my legislation so that a full and complete package of housing can be enacted by the 91st Congress.

Mrs. DWYER. Mr. Chairman, there are two facts about this bill, the Housing and Urban Development Act of 1969, which I believe deserve special mention:

First, the bill was approved unanimously, both in the Subcommittee on Housing and the full Committee on Banking and Currency. Not a single dissenting vote was cast.

Second, although it does not plow any new ground, the bill is, nevertheless, of the first importance.

This may be a paradox, for legislation of major importance ordinarily is controversial and ordinarily arouses at least some opposition in committee.

The absence of controversy, Mr. Chairman, is due, I suggest, to several other facts including these:

First, the existence in the housing and related construction fields of seriously depressed conditions which Government has an obligation to help remedy;

Second, the basic purpose of this bill, which is to extend, improve and bring up to date the authority for many of our most important housing and urban development programs, and to make certain desirable adjustments in the administrative mechanisms which keep these programs working; and

Third, the broad public acceptance of most housing and urban development programs as essential tools in the effort to maintain and rebuild American urban communities and to improve the lives of the people of those communities.

To repeat, Mr. Chairman, there are no revolutionary departures from previous directions in this legislation. There are no bright and shiny innovations to attract special attention to this bill. What there is, I suggest, is at this stage in our experience even more important. It is the money and the authority and the changes which are needed to keep alive and well the housing programs of demonstrated merit and great potential.

Very briefly, and among other things, the Housing and Urban Development Act of 1969 will do the following:

First, extend FHA mortgage insurance authority, including provisions for improving the operation of section 235, the homeownership assistance program, and section 236, or the rental housing interest subsidy program—two of the most promising newer efforts to bring decent housing within the reach of low- and moderate-income families.

Second, increase the authorization for the urban renewal and related programs, including the neighborhood development program, and to permit these programs to be funded on a 2-year basis, a simple but crucial reform which will greatly improve the capacity of the Department of Housing and Urban Development and the communities with which they contract to do a better job.

Third, modernize in several important ways the public housing and the rehabilitation loan and grant programs; preserve for an additional year the eligibility for local grant-in-aid credits which certain communities were in danger of losing through no fault of their own as a result of unusual delays in the transition from urban renewal to neighborhood development, and in the implementation of the latter.

Fourth, recognizes the great success and widespread popularity of the section 202 program of housing for the elderly and the handicapped by extending the life of the program and increasing its authority.

Fifth, provides additional funds for the model cities program which will enable all 150 cities which have so far received planning assistance to move fully into the area of program activities.

Sixth, extends for an additional year such familiar but extremely valuable programs as the section 701 comprehensive planning program, the open space, urban beautification and historic preservation programs, the program of supplemental grants for public facilities in new communities, the neighborhood facilities program, the advanced land acquisition program, and the water and sewer program—the last of which would be increased by 25 percent in view of its considerable importance in the orderly growth of suburban communities.

And seventh, facilitates participation by States and localities in both the flood insurance program and the urban property protection program.

In the case of the flood insurance program, the committee proposes to authorize the Secretary of Housing and Urban Development to implement the program on an emergency basis within the next 2 years. Because of delays in completing the required ratemaking studies, this program has been extremely slow in getting underway and, as a result, homeowners in flood-prone areas have been denied protection which Congress voted to give them last year. The emergency authority in the present bill will enable the Secretary to overcome these obstacles, expedite the actual writing of insurance agreements and policies and yet fit in with the long-range overall program.

These are only the highlights of the bill before us, Mr. Chairman. I have called attention to them in order to emphasize the point I made earlier: that this is a bill of major significance even though no radically new programs are involved.

In addition, however, I should like to call the attention of our colleagues to three or four specific matters of interest: First, I believe it is useful to emphasize the importance of housing for the elderly. This is a program in which I have had considerable interest from the very beginning. In my own area of New Jersey, I have personally inspected many housing projects for older persons, and I have been uniformly and favorably impressed with the quality of the housing, with the high level of upkeep and maintenance, and with the truly grateful attitudes of those older people who have become residents. By whatever standard we choose to measure this program—economic, social, humanitarian—housing for the elderly receives very high marks, and I hope our colleagues will manifest their confidence in this program by providing the continued authorization and support it requires.

Second, I believe it is also important to underline the committee's concern with three aspects of the Government's responsibility toward low-income families. As the committee report makes clear, the very basic requirement that at least 20 percent of the housing provided through new construction and rehabilitation in urban renewal programs must be for low-income families has not been properly implemented by the Department. At best, this is a very minimum requirement, and I can conceive of no justification of the failure to insist upon its accomplishment and implementation. By the same token, the relocation of persons displaced by virtue of the urban renewal program continues to be a source of considerable concern.

More effort, more imagination, more concern must be invested in the obligation to make certain that relocation programs are adequate to the needs of the people in every renewal area. Finally, the success of the urban renewal, relocation, and other efforts to assist low-income families depends on the effective management of the public housing projects. Too often, inadequate management has contributed to the decline in quality of public housing facilities with unfortunate results which harm the entire effort to house the disadvantaged. It is in the interest of the disadvantaged themselves and of the public image and acceptability of the public housing program that the Department take steps to improve project management practices wherever necessary.

Last year, Mr. Chairman, I offered an amendment during House consideration of the Housing and Urban Development Act of 1968, to require that the Department report annually to the Congress on the progress it was making to eliminate redtape, to expedite action on program applications, to simplify procedures and requirements, and in general to improve the management and administration of the many programs within its jurisdiction. The first such report has not been made and the Department has requested the Committee on Banking and Currency for an extension of time. In view of the fact that the Department is, in effect, under new management, the committee has approved this request. Speaking at least for myself, and I believe for most of my committee colleagues, I should like to stress that our agreement in no way indicates any lessening of our concern for improved management of housing programs. Our ability to provide decent housing for the American people—which is certainly one of the priority goals of our Government—depends as much on proper administration as it does on funds and authority. The way we do things is just as important as what we do. I urge adoption of the bill.

(Mr. ASHLEY asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. ASHLEY. Mr. Chairman, last year the Congress overwhelmingly approved adoption of the neighborhood development program as an alternative means of financing and implementing urban renewal projects.

Although budgetary considerations have limited the number of NDP cities to 35, our committee has been impressed with the successful initial accomplishments of the neighborhood development program. Nearly all the cities now participating in NDP have managed in a responsible manner to increase the level of renewal activity in high priority areas in response to the most pressing and immediate needs of the community.

The initial renewal action of the NDP cities clearly demonstrates the general capability of our communities to utilize a substantially increased level of Federal funds for vitally needed renewal programs. Federal funding of urban renewal at an annual level of $1 billion, anticipated for the current year, is manifestly inadequate. This averages out to only $20 million per State or, if we include the local one-third contribution, $30 million per State. At this level, deterioration takes place far more rapidly than renewal and rehabilitation.

We simply must recognize this fact and be prepared for substantially greater commitments if we are to meet the renewal needs of our cities.

One of the major concerns of our committee has been that the NDP program be continued as originally conceived, that programs currently underway receive a reasonable level of funding, and that the integrity of the effort be sustained. Many of us are convinced that NDP is a far more direct and yet more flexible approach to urban renewal than the conventional financing with capital grant reservations. Conventional urban renewal projects have taken an average of more than 10 years to carry out and have cost nearly twice as much as originally conceived. Nearly half of Federal funds appropriated for urban renewal are now used to cover increased costs of approved projects. Under NDP, the need for amendatory financing is largely obviated by virtue of the annual review procedure which allocates funds for the immediate action year, together with a reservation for the following year.

In order to assure a fair distribution of funds between conventional projects and NDP projects, the committee unanimously voted to earmark $400 million for NDP during the current year and 35 percent of urban renewal funds made available in fiscal 1971.

The committee recognizes that cities cannot be expected to project all their renewal needs for each and every potential area of their city. Cities can be expected, however, to provide reasonable estimates of action and cost for areas for which they are seeking Federal assistance. In any event, there should be no constraints set by HUD to limit local priorities, including area size and number and the recent requirement of Secretary Romney that new NDP projects must be completed within a 2-year period and that 80 percent of the Federal funds for the project must be spent in the first year.

This requirement is clearly contrary to the intent of Congress and, if carried out, will result in a completely different program than was envisioned by the Congress when it acted last year. I trust, Mr. Chairman, that the legislative history of the bill before us will establish beyond any question that the Congress supports the neighborhood development program and expects the program to be administered in accordance with the provisions of the 1968 Housing Act.

Mr. BARRETT. Mr. Chairman, I yield 10 minutes to the gentlewoman from Missouri (Mrs. SULLIVAN).

Mrs. SULLIVAN. Mr. Chairman, the Subcommittee on Housing, under the chairmanship of the gentleman from Pennsylvania (Mr. BARRETT), has worked hard this year—as we have every year—in investigating the areas of greatest need in meeting our housing problems. We know what the problems are—and largely they are problems of financing. Money will not solve all of our housing difficulties and inadequacies, but adequate financing would certainly solve the housing problems of the moderate-income family and would go far toward solving most of the problems of housing the poor.

Much as I would like to say that the bill now before the House is a great forward step toward meeting our housing needs, this bill is not in the same category as the Housing Act of 1968 or the Housing Act of 1966, two of our great legislative accomplishments of recent years. This bill now before us to a large extent merely continues programs already in operation or already authorized. We have not blazed any new trails or pioneered any new approaches in this measure. The reason we did not is an understandable one: the many innovative programs we authorized in the last 3 years have not yet been funded and are not operating effectively.

How can we make any intelligent judgments as to the next steps in these programs if we have no clear evidence one way or another as to whether our previous proposals will work well? A combination of budget-cutting, foot-dragging, and tight money has put all of our imaginative new ideas of 1966 and 1968 into mothballs.

THE LINE IS MUCH LONGER—THE WAIT MORE DESPAIRING

The budget cutting and foot dragging have affected mostly the programs for low-income families—both the home-ownership and the rental programs to rehouse those who now live in crowded, inadequate, substandard accommodations.

They are, unfortunately, used to waiting at the end of the line for the solution of their housing problems, but now the line is much longer than usual and the wait is a lot more despairing. President Nixon's expressions of reluctant resignation to the stagnation in housing construction as the only real result so far of his program to combat inflation brings little comfort indeed to the poor who desperately need better housing.

But a very important and very influential—politically very significant—factor has been brought into the crisis over housing financing, and it is the great middle class in this country. Families which, under normal circumstances, could build or buy their own housing without any governmental assistance of any kind now find themselves caught in the so-called credit crunch, which, for them is a stranglehold.

COSTS FAR MORE TO FINANCE THAN BUILD HOMES

They can get out of it only by signing up for mortgage terms which are unconscionably high—and with foreboding long-term consequences. It now costs far more to finance the purchase of the average home than to build it. And the only solution which has been put forward so far is to do without, or pay excessive interest and kickbacks in the form of points.

People can do without a lot of things, and will do without them when they have to. But the average American family, surrounded by prosperity on every side, and by evidence of ready access by other types of investment to all of the funds needed, cannot understand why its needs and desires for better housing seems to be the only type of investment for which funds are now unavailable.

While the Subcommittee on Housing was working on this legislation this year, the National Commission To Study Mortgage Interest Rates was engaged in a special study into the problem of assuring adequate mortgage funds for low- and moderate-income families at "reasonable" rates of interest. As a Member from the House of Representatives of that Commission, I was bitterly disappointed by its failure to grapple with the fundamental problem assigned to it. Instead, all of the thought and effort seemed to go into the single issue of whether the ceiling on FHA and VA interest rates should be removed entirely, or be suspended for a further period of time.

This was, indeed, one of our assignments, but it was not the major one. Consequently, when the Commission majority failed to come forward with effective solutions for the high-interest-rate problem for low- and moderate-income housing, two of us on that Commission—Chairman WRIGHT PATMAN, of the House Committee on Banking and Currency, and I—filed a minority report which did outline numerous steps we could and should take, on an urgent basis, to solve our mortgage crisis.

HOME MORTGAGES FOR MIDDLE-INCOME FAMILIES AT REASONABLE RATES

The report of the Commission came too late to influence the development of the housing bill now before us, other than in the provision which extends for another year the suspension of the 6-percent ceiling of FHA rates. The basic issues remain unsolved. These issues must be solved.

One solution put forward recently is H.R. 13694, which I introduced on September 9, 1969, with the cosponsorship of the chairman of the Subcommitee on Housing, the gentleman from Pennsylvania (Mr. BARRETT). This bill goes to the heart of our problem in financing homes for the average family—the availability of mortgage funds at reasonable rates of interest.

It is a solution we know can work, because it has worked in the past.

It is a bill to establish a new Federal direct loan program, for moderate-income families—those with incomes up to $12,000 a year—who cannot obtain mortgage financing at reasonable rates of interest from customary sources of mortgage credit. The bill creates the Home Owners Mortgage Loan Corporation, with an initial capitalization of $2 billion, and eventual capitalization after 5 years of at least $10 billion, for loans at 6½ percent or less, to credit-worthy families able to meet the expenses of homeownership but unable to obtain credit in the mortgage market except at excessive rates of interest.

This program will not cost the Government a single cent. It will use the borrowing power of the U.S. Government for the benefit of the rank and file of American families, until mortgage interest rates come down to a manageable and reasonable level.

THE HOME OWNERS MORTGAGE LOAN CORPORATION

The HOMLC created by H.R. 13694 would function only during those periods when its assistance was necessary. No new bureaucracy would be created. Loans would be extended through the regular FHA structure. The maximum loan extended under this program would be $24,000.

This is the only solution on the horizon for correcting the distortions of the investment market which have relegated middle-income housing to the bottom of the list of priorities for financing.

Every Member of this House is familiar with the plight of the middle-income, hard-working, tax-paying, self-reliant American family in trying to obtain mortgage financing in today's market. Unless the purchaser is willing to pay a fantastically high premium, which most families cannot afford to do, he cannot obtain a mortgage.

High interest rates are usually a temporary phenomenon in the business community. Most business loans are short term. But in the housing field it is the opposite. An 8-percent or higher interest rate is built into the mortgage for its life—often 30 years. If and when interest rates do go down to more acceptable levels—as they undoubtedly will do eventually—the homebuyer, saddled with a mortgage at today's rates, will still be trapped in his high rate. He will be able to get out of it only by paying a substantial penalty in addition to going through all of the mysterious and expensive closing costs of refinancing.

Mr. Chairman, I am deeply aware of the problems of our low-income families today in obtaining decent housing. These are the families which need one form or another of Federal assistance in obtaining better housing—either through subsidized rents or subsidized mortgage interest rates. We have in being many programs to help those families—if only the funds are appropriated by the Congress and used by the administration. We know those problems and have the solutions, if only they are applied.

A NO-COST, SELF-SUPPORTING PROGRAM TO HELP SELF-RELIANT FAMILIES

But, for the middle-income family, there is nothing available to help them except advice to be patient. And that is not good enough. We need programs to provide relief—not assistance, but relief from intolerable distortions in the private money market.

It is, therefore, my intention to do everything I can to bring about the creation of the Home Owners Mortgage Loan Corporation to serve as a last-resort source of mortgage financing for the average family when other sources of funds are closed to that family by conditions such as now exist in the investment market.

I hope other Members of the House who are fully aware of the problems of their moderate income constituents will join the gentleman from Pennsylvania (Mr. BARRETT) and me in the furtherance of this idea for a direct housing loan program when private funds are not available except at unconscionable rates of interest.

This program will not be any form of handout or giveaway. It will be fully self-supporting—paid for in full by the families participating in the program. No subsidy is involved—just a willingness to use some of the vast resources of this Government for the people whose taxes make government possible.

Mr. PATTEN. Mr. Chairman, will the gentlewoman yield?

Mrs. SULLIVAN. I yield to the gentleman.

Mr. PATTEN. I agree 100 percent with you, that our mailmen, our postal clerks, and people in the middle-income bracket cannot get a house for a number of reasons, on account of interest rates, zoning laws, and a lot of other reasons. Nobody is building anything in my area except for $35,000. All our people working in our factories who are doing good every day working, the vast majority are out altogether under this program.

I cannot find much hope, as I look at this bill, for our good people, the average middle-income people who go to work every day, and it is the worst problem I have facing me in my district.

One other thing, the last time we increased social security, the housing authorities of New Jersey took every dime away from these elderly people who only get $91 a month and they raised the rents. I hope this bill is so written that if we give something a little later on, a 10- or a 15-percent increase in social security that these housing authorities cannot grab it and take the full benefit of that from these old people. Our social security people only average $91 a month. I think this bill should do something about them.

Mrs. SULLIVAN. I would answer the

gentleman from New Jersey by saying this is what happens also every time there is an increase in Federal wages. Anyone who lives within the Washington, D.C., area knows that the minute Federal employees get an increase, then everything goes up.

Mr. PATTEN. How you can say that—I was raised $50 in May and $50 in November.

Mrs. SULLIVAN. May I say that the gentleman is going to have a chance, I think, under the 5-minute rule to hear more about this direct loan program for the middle-income family. I am planning to offer it as an amendment to this bill.

Mr. PATTEN. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 238]

Abbitt	Downing	Morse
Arends	Edwards, Ala.	O'Konski
Ashley	Eshleman	O'Neill, Mass.
Baring	Evins, Tenn.	Ottinger
Bingham	Fallon	Passman
Blackburn	Fascell	Powell
Brooks	Findley	Price, Tex.
Burton, Utah	Ford, Gerald R.	Quie
Cahill	Garmatz	Reid, Ill.
Carey	Gettys	Reid, N.Y.
Clark	Hays	Riegle
Clausen, Don H.	Holifield	Rivers
	Howard	Rodino
Clay	Jones, N.C.	Rooney, Pa.
Corbett	Jones, Tenn.	Rosenthal
Corman	Karth	Rostenkowski
Culver	Kirwan	Steiger, Ariz.
Cunningham	Landrum	Ullman
Dawson	Lipscomb	Utt
Devine	Long, La.	Vanik
Diggs	McCarthy	Whalley
Dingell	Martin	
Dorn	Mills	

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FLOOD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 13827, and finding itself without a quorum, he had directed the roll to be called, when 365 members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey (Mr. WIDNALL).

Mr. WIDNALL. Mr. Chairman, I yield 12 minutes to the gentleman from New York (Mr. HALPERN).

Mr. HALPERN. Mr. Chairman, as a member of the Housing Subcommittee of the Banking and Currency Committee, I am cognizant of how difficult it is to find simple answers in this highly technical and widespread area of housing. One must understand not only the nature of the lumber, bricks, and mortar needed to erect a dwelling, but the involvement in that structure of the workers who build it, the community it becomes a part of, the banking institutions which must finance it, and, most important, the family who will live in it.

I want to extend my enthusiastic compliments to the distinguished chairman of the subcommittee, the gentleman from Pennsylvania (Mr. BARRETT) and to the able and hard-working minority member, the gentleman from New Jersey (Mr. WIDNALL) for their painstaking efforts and leadership in bringing before this House a bill that provides us with the basis to get housing moving in this country once again and give the necessary impetus to the historic Housing Act of 1968.

I have joined in reporting this bill, H.R. 13827 to the House, but commendable as the legislation may be, I acknowledge the need for improvement on some point. And, it is my hope that it can be perfected in the legislative process before us. Let me analyze the bill and voice my views on some of its provisions.

FHA DOWNPAYMENT REDUCTION

I enthusiastically support section 102 of H.R. 13827, which provides for a 10-percent—15-percent for veterans—reduction in downpayments of FHA-financed homes between $20,000 and $25,000. This will be extremely helpful to prospective home buyers whose decisions are primarily based in many cases on the lump sum they will have to put down. There is much talk about the high interest rates on mortgages discouraging people from buying houses, but the average person thinks first of how much it will cost him out of pocket at the closing and only thereafter about his interest payments over 30 years. A reduced downpayment will make it possible for many people with limited savings to take that first step. In the end, this incentive may lead to more home purchases and help reinvigorate the presently wavering home construction industry.

In the Senate bill an additional provision was made to increase mortgage limits by $2,500. I regret that a similar provision was not included in the House version. Especially in high cost areas such as New York City, it is becoming increasingly difficult for people to find homes priced within reach of Federal limits. The home buyer should be able to obtain Federal mortgage assistance for the housing prices available in his area, and not be cut off because of some standard which has little relevance to the cost of homes in his city.

However, interest rates are still discouraging many families from purchasing homes. The Federal Reserve Board raised interest rates to their highest level in a century this year, hurting prospective homeowners' buying power.

What this means to the average family in Queens is tough to swallow. In 1950, a Government-guaranteed FHA mortgage cost 4¾ percent with premium charges. On a $20,000 mortgage for 30 years, this meant total interest payments of $17,584 in addition to principal.

Under the new rates, FHA interest now totals 8 percent with a premium charge. Now a 30-year, $20,000 mortgage requires total interest payments of $33,387, in addition to principal. The interest has practically doubled in 20 years.

To make matters worse, in the outlying areas of Queen, and in nearby Nassau County, a recent State survey found that new homes are costing between $35,000 and $50,000—and that only 11 percent of today's house hunters can afford this sales price.

ADJUST COST LIMITATIONS

However, once again the complexities of the area seems to have beclouded several provisions which need to be improved if they are to provide satisfactory solutions to today's housing needs.

Let us not forget what the goal is, as Congress declared in 1949—"a decent home and suitable living environment for every American family." By this standard we are falling short.

In particular, I am concerned about the critical problem facing the low and moderate income housing production in the Nation. A major cause of this difficulty is the unrealistic statutory cost limitations contained in federally assisted housing programs. This matter is so urgent that if action is not taken to overhaul these limits—in section 235 homeownership and in section 236 rental assistance—publicly assisted housing production may well come to a standstill in many of our great cities.

In New York, Baltimore, Minneapolis, New Haven, Philadelphia, San Antonio, and Los Angeles construction, according to housing officials, is in jeopardy because of these statutory limitations.

I believe the best long-term solution is a flexible formula, as adopted in the Senate, which would permit adjustment in the cost limitations to reflect changes in actual construction cost indices.

In addition, limitations in high-cost areas would be a fixed percentage—45 percent—higher than those in normal areas.

The slight increase of 10 percent offered by this legislation is simply not enough in a high-cost area.

Mr. Chairman, one need spend only a short time in New York City or any of our great metropolises in order to determine that the cost of living is higher there.

Over the last 20 years construction costs have increased at least 125 percent nationally and 130 percent in high-cost areas. Projected increases are even more spectacular. Under these conditions, new housing units are facing seemingly insurmountable barriers.

Let me give you an example. I recently learned of a private enterprise in New York which successfully constructed and financed a 66-unit apartment building in East Harlem in half the normal time and at 10 percent less than normal cost.

The company recently purchased three additional land sites and drew up more plans. But now, it has reported to me, it feels it must scale down the number of three-, four-, and five-bedroom apartments in the projects and lower the average number of rooms per apartment. It cannot afford to build units under the present $3,150 per room cost limit, nor will a 10-percent increase make the difference. It is forced to increase the number of efficiencies and one bedroom units, which have a cost allowance per room of $4,250.

The builder has told me:

> Even with the 10% increase over the 1965 statutory cost limits . . . we cannot design and build apartment projects with the large units desperately needed in these highly dense poverty areas.

The New York City Housing Authority, moreover, tells me it has projects lined

up which would produce nearly 5,700 units. The land is cleared, designs approved, everything is ready to go. Yet recent bids have averaged more than 30 percent over Federal statutory limits.

And if you are in the market for moderate-income housing under section 235 the slight increase in mortgage limits is not going to help much. The basic mortgage limit under section 235 is $15,000, with an increase to $17,500 in high-cost areas.

A 1968 census survey revealed that only 11 percent of new houses sold in the West and Northeast were priced at under $17,500. An FHA survey early this year in Washington, D.C., showed no new single-family houses on the market with sales prices under $17,500.

Mr. Chairman, it is clear to me that we are in grave danger of not only failing to meet our housing goals of 26 million units in 10 years, but of actually moving backward.

Housing starts have dropped from an annual rate of 1.9 million to less than 1.3 million since January. This is a 27 percent decline in less than 9 months.

Although the Federal home loan banks and the Federal National Mortgage Association are increasing funds for the mortgage market, the housing gap is not closing. Housing starts may be at less than a 1 million annual rate by the end of this year.

There are a number of things we should do to prevent this—and prominent on this list is a considerably large authorization of funds under all housing programs. But certainly the correction of this presently unworkable cost limitation formula would be a giant step in the right direction.

Reducing the opportunities for a decent living environment for our citizens is not the proper manner by which to curb inflation. Home construction is not the only, nor the primary, economic factor affecting our economy. Let us look elsewhere to cool the overheated American economy—not in the construction of the homes we live in.

KEEP INTEREST CEILINGS

Finally, let me mention another weakness in the present bill. I object, along with the gentleman from Texas (Mr. PATMAN) and the gentlewoman from Missouri (Mrs. SULLIVAN), to section 413 (a) of the bill which would eliminate the 8-percent mortgage interest rate ceiling that applied to savings and loan associations in all States without similar interest rate ceilings of their own. This would allow the Federal Home Loan Bank Board discretionary authority to set new and even higher maximum ceilings. It could only add to the squeeze presently being felt by low and moderate income families who are being priced out of the housing market by high interest rates.

Let us not justify the destruction of the hopes of so many prospective homeowners by bowing to the god of free enterprise and market demand. Blind approval of this provision is nothing less than endorsement of continually rising mortgage interest rates which have already increased monthly housing payments by 30 percent since January. This provision can only make matters worse and I trust we will succeed in correcting this section to avoid the results I fear it will bring.

Let me be clear—I do not favor holding the line on mortgage interest rates primarily as a means of curbing inflation—I am concerned more that American families can obtain new homes at financing rates they can afford. As in my prior statements, I feel the fight against inflation must not be confused with the need for housing. In our considerations of this complex bill let us hold uppermost in our minds the aim of providing suitable housing for every American family and not let this flowering hope wither to enforce the drought measures of the battle against inflation. Once the flower dies it may not grow again.

Mr. ST GERMAIN. Mr. Chairman, I rise in support of H.R. 13827, the Housing and Urban Devlopment Act of 1969. This bill was reported out of the Committee on Banking and Currency unanimously. It would extend for 1 year the basic insuring authority for Federal Housing Administration programs and Farmers Home Administration programs and provides for authorizations for urban renewal and model cities for fiscal year 1971. The bill would also provide needed additional assistance for our public housing programs and extends for 1 year the present authorization for a number of other HUD programs including comprehensive planning, open spaces, and water and sewer grants. There are three important provisions of this bill which I have been deeply involved with.

I was the author of the emergency flood insurance program which is section 406 of this bill.

Last year's housing act created an important new program to provide federally aided flood insurance to help protect property owners from the disasters of hurricanes and other flood damage. This proposal had the strongest kind of support in the Congress but unfortunately because of the complex and time-consuming mechanics is now available only in three communities in the entire country. In other programs, such as mass transit and water and sewer grants, we recognized the necessary startup time by providing an initial simplified procedure. It is obvious that this needs to be done for the flood insurance program as well.

Under this emergency program in the absence of the establishment of an actuarial rate—which can be established only by the studies which are eliminated in the emergency program—no Federal flood insurance at all will be available to new construction started after the identification of an area as a special flood hazard area nor will the second or actuarial layer coverage be available even to those who do qualify for the insurance. Under the flood insurance provision of the 1968 act all new construction has to pay the actuarial rate and all existing structures have to pay the actuarial rate for the second layer of coverage. Inasmuch as the studies authorized by the 1968 act will continue at the same rate the emergency act is being implemented, eventually Federal flood insurance at actuarial rates will be available even in the case of new structures and the second layer of coverage.

This provision is very simple. It will provide that for a 2-year period the Secretary can make flood insurance available without waiting for the detailed work necessary to set the actuarial rates contemplated by the long-term program. Under the flood insurance program, losses are funded initially by the income from the premiums paid by the property owners and the Federal equalization payment. In the case of exceptionally bad years, further losses would be paid by the capital committed by private insurance plus Federal reinsurance. In the long run it is expected that these unusual losses would average out so that there would be no net use of the private capital. This provision would provide that for an initial 2-year period the insurance coverage would be financed from the premium income and the Federal equalization payments. In the absence of actuarial rates, the contract equalization and reinsurance formulae in the existing agreement between the insurance companies and the Federal Insurance Administration will have to be restructured for insurance written under this emergency program. As in the basic program, the Secretary could provide this coverage only for communities which requested it and which agreed to meet the land use planning controls provided for in the permanent program. It would not be expected that private companies would participate in this emergency provision but as the actuarial rates are set, the machinery would be there for them to come in under the long-term program.

There will be no relaxation of the statutory requirements for the adoption of appropriate State and local land use and management controls by a community as a prerequisite to qualification for the Federal insurance.

Mr. Chairman, Hurricane Camille was a painful reminder that we have delayed too long for making flood insurance protection available. This provision will meet that need.

Section 207 of H.R. 13827 would remove the requirement in the section 312 rehabilitation loan program which limits eligibility for residential rehabilitation loans to persons whose annual income is within locally applicable income limits for the section 221(d)(3) below market interest rate program. Earlier this year I introduced H.R. 11914 which was incorporated into this bill as section 207 during the Subcommittee on Housing's executive session. The committee has received considerable testimony of all groups that the existing income limitation makes ineligible many of the homeowners in selected project areas and a substantially higher percentage of the owners of rental properties. Rehabilitation goals of the urban renewal program were being seriously affected by this income limitation. Serious inequities were developed in denying assistance to a significant number of property owners in such areas who were being required to rehabilitate their property. In most of our cities, and, particularly in my district, the 312 rehabilitation loan program had ground to a halt because of this income limitation.

Many of the Members, I am sure, are hearing complaints about adequate public protection of residents in public housing projects. At the present there is no separate provision in the public housing law providing funds for the use of police or security forces in public housing projects. Local law enforcement agencies have not been able to deal adequately in providing safety for public housing residents. A number of public housing authorities are providing some sort of police or security forces but must pay for them out of their administrative expenses. Most housing authorities do not have the funds to do this. It was our understanding in section 204 of last year's Housing and Urban Development Act that funds under this section could be provided for the security of public housing residents, but the administration requested no funds for the implementation of this program. It is my understanding that the modification of the public housing annual contribution formula in this bill will provide additional funds by which local authorities may also finance public housing police or security forces along with the other administrative expenses. Since the Federal Government is assisting these people in obtaining suitable housing units then it should also provide for the safety as well as the housing of our citizens.

(Mr. MINISH and Mr. GONZALEZ (at the request of Mr. HANNA) were granted permission to extend their remarks at this point in the RECORD.)

Mr. MINISH. Mr. Chairman, I rise to strongly support H.R. 13827, the Housing and Urban Development Act of 1969. This bill would extend for 1 year the housing bill and urban development programs administered by HUD and by the Farmers Home Administration and make a number of amendments to those programs.

H.R. 13827 is the omnibus housing bill for this year and contains a number of very important authorizations to continue the Federal Housing programs into fiscal year 1971. The Committee on Banking and Currency reported this measure unanimously. Fiscal 1971 funding for urban renewal and model cities, improvements in rural housing programs and flood insurance protection, and strengthening of the neighborhood development program are among the major provisions of the legislation.

There are a number of sections in this bill of particular concern to me, one of which is a much needed emergency flood insurance program to make available immediately, for a 2-year period, flood insurance for homeowners and small businessmen during which time local actuarial studies will be conducted to provide a basis for a permanent flood insurance program. This provision will greatly assist citizens in high flood risk areas to obtain much needed insurance to protect their homes and businesses against catastrophic losses from flood damage.

Another important section of this legislation deals with the neighborhood development program. In response to the administration's failure to carry out congressional intent regarding the NDP, the committee has included a provision in the Housing Act of 1969 reserving 35 percent of the total urban renewal funds for neighborhood development. The committee also reserved $400 million of fiscal 1970 funds for the neighborhood development program and authorized HUD after July 1, 1970, to commit urban renewal money for a 2-year period under the NDP in place of the present 1 year and to reserve funds for an additional 2-year period.

Last year's landmark Housing and Urban Development Act established the neighborhood development program as an important element in the Federal Government's urban renewal effort. NDP was designed to accelerate urban renewal projects and to encourage efficient and flexible utilization of Federal and local resources to combat urban blight. After enactment of the 1968 housing law, the Department of Housing and Urban Development began a concerted campaign to encourage cities to convert their urban renewal projects to the neighborhood development approach. Neighborhood development, the communities were told, would provide for a smooth flow of Federal funds and flexibility of movement between one urban renewal project and another. It would allow for starting needed urban renewal activity by obtaining funds quickly without waiting for HUD to finance each individual project area. Communities, under the NDP, would not be required to prepare detailed plans for each project prior to acquisition—a general plan would be acceptable.

Hundreds of cities across the country recognized NDP's great promise for substantial coordinated progress in urban renewal and undertook the expensive, time-consuming, and difficult task of converting their conventional urban renewal projects to neighborhood development.

During the last month, HUD has taken upon itself the reevaluation of the neighborhood development program. The Department has indicated it intends to impose certain restrictions and eliminate much of the flexibility built into the neighborhood development program. These restrictions will severely hamper the operation of this valuable program and could mean that only 30 to 40 NDP projects will receive any funding at all this year.

Clearly HUD has failed to administer the NDP as Congress intended. Passage of the Housing Act of 1969 by an overwhelming margin is imperative if the Congress is to respond to HUD's violation of its will.

The city of Newark, N.J., provides an excellent example of the manner in which HUD has mismanaged the NDP. I insert an editorial from the Newark News on the subject of Newark's dealings with HUD:

RENEWAL RUNAROUND

Newark officials justifiably feel they are getting the runaround in Washington on requests for information on how much federal aid will be available for the city's urban renewal program.

A Housing and Urban Development executive denies plans to cut the program by 90 per cent to an overall 20 acres, but won't give any specifics on how much of a cut will be made. His department, he says, is awaiting guidelines from the Bureau of the Budget before making decisions.

With 1,300 cities applying, the HUD spokesman says, there just isn't enough money to go around. But, as New Jersey's Rep. Joseph G. Minish points out, Highland Park, Mich., with only one-tenth of Newark's population and a fraction of its problems, won approval several months ago for $4.9 million in urban renewal aid.

Newark's program, asking for $48 million to help ease a critical situation, was submitted last February and won approval at Philadelphia regional headquarters last May. Since then, inquiries to Washington have encountered only silence and evasion.

The administration's desire to hold down federal spending as part of the fight against inflation is understandable, in fact laudable. But somewhere a sense of proportion has been lost in carrying out that purpose.

If funds can be found in the Treasury for developing a supersonic passenger plane, for subsidies to merchant shipping, for building the antiballistic missile, and for more bombers, the budget experts ought to be able to dig up the amount required to help Newark continue its attack on housing and economic problems and thereby meet pressing needs.

Mr. GONZALEZ. Mr. Chairman, I intend to vote for the passage of the Housing Act amendments reported by the Committee on Banking and Currency. Yet at the same time I cannot say that this bill meets the urgent and vast needs of the country for new and rehabilitated housing, for it does not. This bill is designed, as some of my colleagues in the minority like to put it, to be "noncontroversial." In putting this bill together we have avoided controversy, but we have also failed to create the bold and brave action that is required to solve the housing crisis of this Nation. We are putting aside yet another time, as we have every year, action to deliver on the promise of a decent home for every American. It is a problem that is growing so rapidly that we cannot long afford to let the gap between housing needs and production grow, yet that is what we are doing. We are taking no action to solve the housing problem of this country today; we are simply hoping that it will wait yet another year.

But the fact is that for all too many average citizens, and I am not talking about just poor people—housing is priced completely out of reach today. We cannot ignore this problem.

Housing starts have declined at a rate that can be called nothing short of disastrous. This year alone starts of new housing have declined at an annual rate of 400,000 units, down from 1.9 million units to 1.5 million units. And this decline is continuing today. Not only is there less housing being built, but what we are getting costs more and more. The average FHA house last year cost $20,000. Between 1965 and 1968, production of homes costing less than $12,500 declined by 70 percent. At that same time, houses costing $30,000 and up increased by 53 percent so that now such high-cost homes represent 40 percent of all new housing starts. Indeed, in one suburban county in the Washington area, the average home sale last year was on the order of $41,000. This is not simply a function of growing affluence. We cannot say that Americans are enjoying such high incomes that they are not being priced out of the housing market. The fact is that today probably half the families in America make $8,000 a year or less. Less than half the families in

America could have afforded the price of an FHA-financed home last year.

This is a crisis. Housing has been priced at a level beyond the means of average families in this country today—a situation which has not obtained since the 1920's, and which the FHA was created to change. It is a horrible admission of failure to say that the average family cannot buy housing in this country today, even housing financed by FHA.

Part of the problem lies in interest rates. Like the 1920's we have today interest rates that are nothing short of fantastic. This means that long-run cost of housing is also exorbitant. It also means that congressional enactments to meet the housing shortage will not go as far as they could or should go. For example, $8 million of interest subsidy that could help finance a minimum of 1,500 units of housing at $15,000 apiece on today's market will in fact finance only about 1,100 units. Obviously we must deal with interest rates—not by raising them, but by cutting them to within reason. This is a most urgent matter.

The principal action that we have seen from HUD, however, is a campaign to change building techniques, to provide for what are assumed to be faster and more efficient methods of production. This is all rolled up into "Operation Breakthrough." But I have seen nothing that resembles breakthrough in the housing market this year; what I have witnessed is a breakdown of housing production. Gimmicks will not resolve this problem.

Neither will we solve the housing shortage by resorting to the unlimited production of mobile homes, as has been suggested. The problem is that while mobile homes assuredly have their place in the housing market, a mobile home is not suitable as a solution to the basic housing need of the country. A mobile home is exactly what its name implies—temporary housing. We are not going to solve our housing requirement by temporary housing. In fact, if we were to resort to this device, we would only be building rolling Hoovervilles. For the fact is that a mobile home may be expected to last only about 12 years as a usable unit. What happens then? Let us build mobile homes, but let us not be deluded into thinking that they are going to close the housing gap.

The fact is that we must face squarely the issue that has been avoided thus far by the administration: Gimmicks do not solve our problems in housing. We can produce the housing we need in this country, but only if we allocate the necessary resources to do that job. It is a sound estimate that our housing goals can be met if we redirect 1 percent of the gross national product into the housing industry. Presently what we are witnessing is a shifting of resources away from housing and the results are calamitous. Unless action is taken to change that trend, and to obtain a commitment of resources adequate to meet the real needs of the housing industry, all the breakthroughs, and all the gimmicks HUD produces will not end the dilemma. We must confront the issues, not next year, but this year. Too much time has already been wasted, too little real action taken, and too much gesturing done. The housing needs are here and now, and action ought to be taken here and now to meet that need. What we are doing today is too little and too timid. We are doing less than we can, and assuredly less than we should.

Mr. PATMAN. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. HANNA).

Mr. HANNA. Mr. Chairman, in this bill we are, for the most part, extending what is already in the law, in certain restrained respects, improving certain sections of the law. But we are temporizing with the true problem of housing in the United States. We heard testimony from Mr. Martin, head of the Federal Reserve Board, yesterday, that for the foreseeable future there would be a substantial pressure of capital requirements in the United States and elsewhere in the world. That means we will be trying to solve the problem of housing in a crisis of capital. It would seem to me if we are going to avoid the constant pressure of high interest rates, we are going to have to apply some policies which direct the utilization of limited capital funds. A portion of this should be done with the true approach to fight inflation which is not now being followed; namely, to be sure what capital we have is being applied in this economy to where it produces something of value and where it is truly operating substantially to increase the velocity of this economy. This kind of policy we are not pursuing. I suggest to you at the present time, following what is happening in commercial banks, that the capital available in this country is being utilized to create mergers and to allow the growth of conglomerates. These people can pay the high costs of money. Are they contributing to the making of anything in this society which is of value and which is enhancing the total gross wealth of our country? I suggest that they are not. They are shuffling paper around changing equity and in the process inflating selected stock values and concentrating ownership.

Housing is one of the most dynamic areas in our economy. Money put into housing will have a multiple factor of 2½. That means for $1 billion put into housing, actually, with the velocity of turnover, there will be $2½ billion. With this there is an accompanying tax return to the Government. If one were to make an input-output economic analysis of housing dollars it would be amazingly informative as to how broadly the beneficial effects of housing dollars strike across the spectrum of industrial and commercial activity. For instance, $1 million of housing would read out to have tens of thousands in dollar impact on extractive industries such as cement, clay, gypsum, and iron ore. Tens of thousands of dollars would be found flowing to lumber and forestry products. The same for steel and aluminum subsidiary impacts can be traced in fabrics, furniture, furnishings, appliances, and so forth, and so forth. My conviction is that such a detailed study should be made and presented to the Members of this House.

My judgment is that our inflation problems demand more attention to productive use of capital and less emphasis on the blind restriction of capital. New money supplies based upon real value and real healthy growth of national wealth is not, I repeat, not, inflationary. Unjustified interest rates and unproductive use of capital are inflationary.

If we are going to meet inflation, we should put our capital where it will do the most good. One such proven place is in the housing industry.

These are some of the other aspects of housing if we are to solve this problem.

Let me suggest to you who own homes what should be considered when you buy a home. Do you realize that you are putting yourself in a position to pay a tax on a tax?

Most of you who have bought homes either in Virginia or Maryland have this situation. The on-site improvements such as the sewers, the utilities and streets and gutters, flood control channels, and many of these other improvements were put on your land cost which added to your house cost became your mortgage.

They were not put into a bond issue. Had they been you would have one improvement district bond to pay off by one district tax. But as part of your house price you now pay all your taxes on this added base and pay interest at the going rate for the life of the mortgage as well.

Mr. Chairman, the man building the project in which your home is located put those improvements in and added them to the cost of the lot which turns out to be a part of the cost of the house. So, over the life of your loan you are paying the interest rate on that particular improvement. Further than that, when the tax assessor comes to put the tax on your house, he taxes on that which ordinarily would have been taken care of by the bond issue but which was not.

You see, we have gotten ourselves into this kind of a position where we are tying into the price of a house a lot of things that should not be there.

For instance, when you buy insurance on your home you buy insurance based on whatever you pay for your home. I bought a home in Virginia for $38,000. I immediately arranged for $38,000 worth of insurance on that house. However, I find out, upon careful analysis, that the lot on which the house sits is valued at $7,000. The lot is not going to burn up. It is going to be there no matter what happens to the house. But when you buy a $38,000 insurance policy, you insure the lot as well as the house. This is adding to the burdens of the homeowners. We have packed so many things like that that come into the picture of homeownership to such an extent that we are in fact discouraging homeownership.

I will agree that homeowners need to increase their insurance as time goes by to be able to replace at today's prices the dwelling they now own. I will agree that it is possible that the economics of insurance risk and actuary studies may dictate increase premiums but I firmly believe that a clearer, more relevant approach would be healthier for both the insurer and the insured.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. PATMAN. Mr. Chairman, I yield the gentleman 2 additional minutes.

The CHAIRMAN. The gentleman from California is recognized for 2 additional minutes.

Mr. HANNA. Mr. Chairman, I would like to suggest to you gentlemen that if you analyze what goes into a house, there are four basic elements. There is the land. There is the lumber, there is the labor. There is the loan.

Now, in my analysis of this the thing that we have most, it seems to me, been unresponsive to is what happens to our policies with reference to land. We have the policies of the FHA, but through their failure to react appropriately, they have allowed land to go spiraling upward based upon speculation, among other reasons. We have allowed the land to escalate in value upon which the home is located. This has come about on the basis of the resale procedure. I know people who have sold land three times in order to build up the value of the land. Yet, the FHA approved an appraisal of land based on its latest sale.

Mr. Chairman, the cost of land has increased 138 percent in the last few years. That is where one of the great inflationary pressures lies in housing. Another place is with reference to the loan. If you increase the interest rate 1 percent, you increase the cost of the house 7 percent. That represents a greater increase than the increase in the cost of labor. Actually, labor has through its productivity kept up fairly well. The cost of labor in housing in relation to other costs has not shifted quite that much, but it has contributed to some extent, something like 22 percent; but certainly not to the extent that the cost of land has increased.

Then, Mr. Chairman, another place which should be considered in the field of housing is lumber, because here again it is our fault. We have followed the policy of selling our lumber and our logs abroad. By forcing our domestic users to bid against exporters we forced up prices and shortened the supply of timber. Because of a short-term policy as regards national forest output of logs we have adversly affected both the cost and the supply of lumber for our own housing industry. This conflicting policy cost homeowners over a 100-percent increase in this one building material alone early this year.

Now it really seems to me if we really are going to solve this problem, we have to give our attention to some of these specifics and we have to give the homeowner some protection so that it really is an intelligent thing to own a home in the United States. If we are going to pursue the policies that I have seen us pursuing here in the last ten years, we are going to discourage home buyers regardless of what we do in this legislation because it is discouraging home ownership.

My friends, if a home sells for $20,000 today, you have already priced 50 percent of the people out of the market. I ask you where can you buy a new home today for as litle as $20,000. Here lies the real dilemma.

Mr. WIDNALL. Mr. Chairman, I yield to the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. Mr. Chairman, the basic "goal of a decent home and a suitable living environment for every American family" has not changed since it was stated by Congress in the National Housing Act of 1949. But the need to meet this goal has become immeasurably more pressing and difficult of achievement in the intervening twenty years.

In 1968 Congress again reviewed our National Housing Goals. It reaffirmed the 1949 goal and determined "that it can be substantially achieved within the next decade by the construction or rehabilitation of 26 million housing units, 6 million of these for low- and moderate-income families."

That goal is not unrealistic or impossible to reach. We have demonstrated in the space program what this Nation can do if there is a total national commitment by all sectors of the economy, public and private, to meet a challenging objective.

In the case of housing a total cooperative effort will be required. First, on the part of the Federal Government, to define the commitment and lead the Nation; second, on the part of all Americans, to control ruinous inflation; third, on the part of State and local governments, to move on restrictive zoning practices and outdated building codes; fourth, on the part of private industry, to develop new techniques for volume production of housing; fifth, on the part of organized labor, to recognize the need to revise outdated working practices which stand as a barrier to the industrialization of housing production; and sixth, and perhaps most important, on the part of Congress, to provide the resources without which all the other efforts will be for naught.

If such a commitment is undertaken, we will be in the fortunate position of saying that, just as we have advanced the spiritual dimensions of mankind through our exploration of the heavens, we have immeasurably enhanced man's physical existence here on earth.

Mr. WIDNALL. Mr. Chairman, I yield to the gentleman from Missouri (Mr. HALL).

Mr. HALL. Mr. Chairman, it is now evident that the greatest single barrier to meeting the goal of 26 million new or rehabilitated dwellings in this decade is continued spiraling inflation. There is no area in the productive sector of the economy that has been hit harder by continuous, gnawing inflation than private ownerships and housing. In 1968, alone, the average lot cost for an FHA-insured single-family dwelling rose nearly $400. Building construction costs in housing rose 10 percent over that 1-year period. Local discriminatory codes are bad, but add on inflation; and what builder needs enemies?

Two inflationary effects have a particular impact on housing. First is the cost of labor. Construction wages are rising at a faster rate than in any other sector of the economy. According to the Bureau of National Affairs, first-year wage settlements, exclusive of fringe benefits, provided hourly increases of 17.5 cents in 1965, 19.8 cents in 1966, 34.9 cents in 1967, and 49.6 cents in 1968. Hourly increases nearly tripled in 4 years and the end is not in sight. We are not unguilty in Congress with our insistence on sacred cows of prevailing wages, Davis-Bacon, and Walsh-Healy laws, in public housing, such as this.

The second aspect is the effect on the money market. For in the financing of housing, inflation does not mean easy money, it means hard money. Mortgages are long-term fixed investments and look increasingly unattractive to investors in an inflationary economy. Hence the supply of mortgage money begins to dry up, sending interest rates all the higher.

Curbing inflation and all its effects is the single most important domestic priority of the present administration. No progress can be made in dealing with any of our problems, whether in the cities or on the farm, whether in housing or in education or in transportation or in welfare, until an atmosphere of orderly, measured, stable economic growth is achieved.

Mr. WIDNALL. Mr. Chairman, I reserve the balance of my time, and I have no further requests for time.

Mr. PATMAN. Mr. Chairman, I yield 10 minutes to the gentleman from Georgia (Mr. STEPHENS).

Mr. STEPHENS. Mr. Chairman, first I want to talk about section 411(a) and then to talk in general about the housing bill.

Section 411(a) of the act deals with the Farmers Home Administration and reflects an effort on the part of the House Banking and Currency Committee to give Farmers Home some of the tools it must have if that agency is to be permitted to meet the housing problems of rural America on a more realistic level.

The facts that should be held uppermost in our minds are these:

Rural America has about two-thirds of all the substandard housing in the Nation, 46 percent of all the poverty stricken, yet only 30 percent of the Nation's population. If the housing conditions that prevail in rural America applied on a proportionate basis to the entire country, we would long ago have been compelled by public sentiment to give housing the priority it should and must have.

A housing recession has existed for decades in many rural areas because mortgage credit, outside of what is provided by Farmers Home, simply does not exist. Small rural banks do not have the capacity to make long-term home loans and meet the other credit requirements of residents in the areas they serve. Consequently, Farmers Home has been, and is, the only vehicle which is consistently supplying funds to meet what no one can deny is a housing crisis.

During the last fiscal year Farmers Home made about 50,000 insured home loans, the maximum number that could be issued under existing legislative limitations. The gap between need and performance becomes painfully apparent when that 50,000 figure is compared with the 300,000 assisted housing loans that are required each year for the next 10 years to meet the national housing goals for rural America.

By law Farmers Home can make loans only to those credit worthy people who cannot obtain funds on reasonable terms from other sources. A fair translation of this situation means that Farmers Home is not just the last but the only hope of people striving to own their homes.

In recognition of this enormous, unmet housing need, subsection (b) of the act removes the present $100 million ceiling on the amount of unsold mortgages Farmers Home can hold at one time. Taken by itself, such a provision would not mean that Farmers Home could provide more rural housing than is now the case. But subsection (e) of the act calls for the consolidation of the agency's direct and insured home loan program accounts which, in effect, would create a single loan account of $350 million out of which both direct and insured loans can be made. The additional $250 million would come from uncommitted funds in the direct loan account. These funds are not being utilized because the insured loan program, created in 1965, has taken over virtually the entire job of supplying home loan funds. For the most part the direct loan account is utilized to make small home repair loans which constitute credit demands that are far less than the resources in the account.

In effect, these two changes make it possible to more than double the capacity of the Farmers Home insured home loan program without having to resort to additional appropriations and without in any way diminishing the direct loan program.

Concerning the remaining parts of the act, dealing with the attempt to streamline the effort to provide rural housing through Farmers Home:

Subsection (c) enables the agency to sell blocks of insured notes backed by the mortgages it originates. As it is now, Farmers Home in essence must sell individual mortgages on the money market. These obligations require a great deal of bookkeeping by purchasers and place Farmers Home at a decided competitive disadvantage in terms of selling its paper. Sale of the notes in blocks would merely give Farmers Home the same method of marketing its paper that is being used by other agencies selling similar obligations.

Under subsection (d) of the act, Farmers Home would be authorized to make advance commitments to builders so that several houses could be built at the same time for later purchase under its insured loan program. As it is now, Farmers Home is restricted to obligation of funds to a single borrower only after a loan is approved and construction can begin only after the loan is closed. The result is construction on a one-at-a-time basis. Being able to make advance commitments means that a number of houses can be built at the same time, thus providing substantially more housing at less cost through volume production.

Subsection (f) amounts to acknowledgment that limiting Farmers Home to serving rural communities of 5,500 or less deprives many needy families from benefiting from the agency. There are many rural communities in the Nation which have larger populations but which nevertheless are truly rural in terms of their economy. This new subsection leaves it to Farmers Home to decide, on the basis of 20 years' experience, what other rural communities, outside of built-up, urbanized areas, need and should receive its services.

In short, Mr. Chairman, these changes in title V of the Housing Act of 1949 are an effort by the House Banking and Currency Committee to somewhat expand the resources of Farmers Home and to streamline the methods by which that agency and that agency alone is confronting the Nation's rural housing problems—problems which I have indicated are proportionately far more severe than those of the cities.

I take a few minutes further today to emphasize the importance of the whole 1969 housing bill which we are debating. There is no legislation which Congress considers that is more important to the well-being of America. The serious plight of homebuilding is a major problem of the moment. I want to be able to say when we pass this legislation that we have tried to provide continued, vital homebuilding.

Public funding alone cannot solve the problem. We have realized that fact in Congress in the recent past and have taken wide and broad steps to encourage and assist private enterprise to expand in putting money into homebuilding. To name a few steps, we have created the insured housing loan program, the rent supplement program to insure private builders a profit and the interest supplement program for encouraging private lenders to build homes for low-income level people.

Since the markup of the housing bill, I have had evidence presented to me that the homebuilding industry has its back to the wall and the main reason is because there is very little mortgage money available. I did not realize how acute this was when we took up the bill. For that reason I did not offer the following amendment which at the proper time I will offer to the House as an effort to make more mortgage money available for homebuilding.

It will read as follows in regard to GNMA.

Amendment to H.R. 13827, to be offered: Page 1, after line 4, insert the following new section:

"SEC. 2. Section 305 (g) of the National Housing Act is amended—

"(1) by striking out '$1,000,000,000' and inserting in lieu thereof "$2,500,000,000';

"(2) by inserting 'at part' immediately after 'and to purchase'; and

"(3) by striking out '$15,000', '$17,500', and '$22,500' and inserting in lieu thereof '$17,500,' '$20,000' and '$25,000', respectively."

I outline this amendment now so that any one interested may not think I have tried to take them by surprise by waiting until the point of amendment arises when we commence the 5-minute rule for amendments.

If my amendment is adopted, I believe that GNMA action thereunder will act to loosen up tight money now in the private sector for home building. My amendment is not mandatory on GNMA.

Mr. PATMAN. Mr. Chairman, I yield to the gentleman from Louisiana (Mr. WAGGONNER) such time as he may consume.

Mr. WAGGONNER. Mr. Chairman, last year the Congress took an important forward step in recognizing the devastation wrought by hurricanes and other forms of flooding through the enactment of a federally assisted flood insurance program. In the past, private insurance companies have not been able to provide this important protection because of the danger of catastrophic losses concentrated in hard-hit areas. As a result, homeowners and other property owners could not obtain the insurance they needed. When a major disaster did strike, some relief was available through low-interest loans and through special acts of Congress. Important as these measures are, the assistance was not immediately available and did not cover all losses suffered.

The 1968 Flood Insurance Act provided for a partnership between the Government and the private insurance industry. It was planned that studies would be made in each area to determine a true premium rate which fully reflected the long-run risk. Because this full rate in flood prone areas and those exposed to hurricane loss would often be too high for property owners to afford, the law provided that the individual would pay a relatively low rate and the Government would pay the balance of the full premium. These payments would meet losses in years of average flood damage and in years of low damage would show a surplus. However, the law recognizes that there would be years of unusually high losses and to meet this cost it was provided that the additional payments would be met from capital pledged by participating companies and by further Federal payments. Over the years the surplus from periods of low losses would offset the additional payments of disaster years. This is a soundly conceived program which will assure prompt cash payments to flood and hurricane victims for their damages, which will cover all or a substantial part of individual damages, and which the property owner will receive as a right because he has helped to pay for it through his premiums.

However, and it is a very big however, experience has shown that there is a serious technical problem in the present law. This arises from the time required to make the actuarial studies in all of the individual areas which need insurance. These rates, which are the key to private participation in the program, require careful study of the history and flood hazards of each community and so far—a full year after the enactment of the basic program—only three small places are actually eligible. The Committee on Banking and Currency in reviewing this program recognized this problem and cut through it with a simple amendment included in the pending housing bill—H.R. 13827—which says that for a 2-year emergency period the Government can go ahead and make the insurance available with losses to be met by premium income paid by property owners and by Federal payments. This simple solution is a sound one since in the long run, after full risk premium rates are set, this is the way costs will

be shared. The result will be to make flood insurance available in a great many areas right now when it is needed. Meanwhile the actuarial studies will proceed so that at the end of the emergency period the basic permanent program with private participation can take over.

The general rules of the permanent program will apply to this emergency provision. That is, a community must request that it be designated for eligibility. The community must agree to have adequate land use controls in effect by December 1971 to limit or prevent further construction in particularly hazardous areas and 1 year after the insurance has become available in the community, property owners will not be eligible for other disaster relief benefits to the extent that they are, or could be, covered under the insurance program.

Mr. PATMAN. Mr. Chairman, I yield 5 minutes to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Chairman, I would like to direct the attention of the chairman of the committee to page 13 of the report, with reference to the item, "Relocation of displaced families." The report makes it plain that the relocation of displaced families is a serious matter, and goes to the very heart of the problem with respect to urban relocation programs. It is pointed out in the report that there is often quite a time which elapses between the time the plan is approved and the time the actual displacement of the individuals within an area would take place. There are several reasons for that.

As the committee points out, there are changes in the vacancy rates and the availability of fewer public and federally assisted public housing units, and, of course, another reason would be the constantly rising housing costs that are always a problem.

However, the report makes this significant statement:

> Currently there is no effective plan to assure that relocation programs are updated as conditions change.

The report goes on to say this:

> In the hope that corrective legislation will not be necessary, we direct the Department to review the adequacy of relocation plans in renewal projects at least every 2 years.

The point I want to make is that it seems to me that directing the Department to review the plans within the next 2 years is not often enough. It seems to me there ought to be at least once-a-year review. I would like to see the legislation provide or have an amendment to this bill provide that the Department will look at this problem and will give immediate attention to it.

Mr. PATMAN. Mr. Chairman, if the gentleman will yield, I think it would be well for the gentleman to prepare an amendment along that line. I have discussed this with the chairman of the subcomittee, the gentleman from Pennsylvania (Mr. BARRETT), and he agrees also that 1 year should be sufficient, that at least it should be 1 year instead of every 2 years for the reason that it is a study, and it would be helpful.

Mr. PICKLE. Mr. Chairman, I thank the chairman of the committee. I hope that tomorrow I will have a chance to offer such an amendment.

I was visited in my city recently by a group which pointed out that under the Housing Act of 1949, I guess it was originally, but as amended in 1965, section 105, they have this very pointed section, which is section 105(4) which says:

> As a condition to further assistance after enactment of this bill with respect to each urban renewal project involving this placement of individual families, the Secretary shall require within a reasonable time prior to actual displacement certain assurance by the local public agency that decent, safe and sanitary dwellings as required by the first sentence of this subsection are available for the relocation of each such individual family.

This is the law, and this is the intent. Yet there is no provision in the act at this point that would require a definite plan. It is said that the Secretary shall demand a good plan on relocation. It seems to me if we are ever going to have a wider acceptance of urban renewal or neighborhood development programs, we must come to better grips with this relocation problem.

I think generally speaking most of the people displaced have found adequate housing, but in some cases there has been extreme unpleasantness or hardship involved. This is not the intent, but until we can solve relocation in a more satisfactory manner, we are going to have constant problems in either urban renewal or neighborhood development programs. And in fact, under NDP, the problem is even more critical because relocation must be planned and implemented within shorter time.

Therefore it seems to me that responsibility will lie with the Secretary to go into these areas and to visit with these people and to be certain that the program is working as we have directed it, and he should give us his report within each year—or at least within a year from enactment of this bill.

Mr. Chairman, I would like to make it clear that while we definitely need greater attention to the relocation problem, both in terms of updating existing plans, and in terms of making sure that those plans are adequate initially, we still should not stop our progress. Displacement of individuals and families is a critical problem, but one which should be solved as we progress. I am hopeful that the amendment I will introduce, as well as the report language present already will have a clear impact from the Washington level right down to the local authorities.

Mr. Chairman, I appreciate very much the gentleman saying he will favor an amendment along these lines. I would hope to offer such an amendment tomorrow.

Mr. PATMAN. Mr. Chairman, I yield 3 minutes to the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Chairman, the need for adequate housing for all of our citizens is certainly not new. There is really no more important item on our national agenda, for if we are really to lift the hopes and the aspirations of our people, then we must remove that daily reminder of all the ills of our society; that is, bad housing.

In 1949, Congress set a goal of the "realization as soon as feasible of a decent home and a suitable living environment for every American family."

In 1968, in the Housing Act which we passed last year, a goal of construction and rehabilitation of 6 million low- and moderate-income housing units in the next 10 years was set.

We have promised much to our low-income population in their attempts to obtain decent, safe, and sanitary standard housing. But we have delivered too little.

In 1969 there are some 7.8 million American families who cannot afford to pay for standard housing which would cost no more than 20 percent of their income.

By 1969 we should have met the needs of our population so that all income levels could live in adequate housing.

By 1969 we should have insured that no family, no person, no child would live in filth and squalor, without adequate ventilation, plumbing, and heating.

In 1969 a country as wealthy as ours should not allow 3 million families to live in substandard and unsanitary conditions.

I have introduced some 25 bills related to housing needs since the start of this session; and I testified before the Housing Subcommittee and I have pointed out a number of areas in which I believe we can make real breakthroughs in housing. I shall not reiterate those today.

However, I should like to call the attention of the Members of the House to the testimony I gave at that time. It starts at page 556 of the hearings. Particularly I should like to stress this afternoon several areas which are of deep concern to me.

PUBLIC HOUSING

Public housing should be a dynamic part of our housing program. Although Congress has been too restrictive, the Housing Assistance Administration of the Department of Housing and Urban Development has been fairly unreceptive to changing or increasing the program's operation.

The public housing program is operated on the basis of contract authorization provided by Congress. The contract authority available to HUD to enter into annual contributions contracts was $754.26 million through fiscal year 1969, and it will be $804.5 million in fiscal year 1970. However, the figures for actual payments made are much lower: $350 million, plus a supplemental request of $16 million for fiscal year 1969, and a budget request of $473.5 million for fiscal year 1970.

The House bill increases the annual contribution contracts authorization by $20 million on July 1, 1970. The Senate bill increases the annual contributions by the same amount on July 1, 1970, and by $175 million on July 1, 1971.

I introduced legislation, H.R. 602, which would remove the existing dollar limit on the amount of annual contributions which may be contracted for by the Public Housing Administration to assist low-rent public housing. Large waiting lists for public housing in cities such as New York, where there are 135,000 ap-

plications pending, indicate that existing production goals are insufficient to meet public needs. The bill would make HUD contributions for public housing more responsive to public demand.

The House bill increases by 10 percent the statutory room cost limits applicable to low-rent public housing projects. The Senate bill offers a more realistic approach to the problem. It provides for a 45-percent increase of statutory room costs in high-cost areas. It requires the Secretary of Housing and Urban Development to determine the change in the building cost index in the beginning of each year and to then make the appropriate changes in the dollar limitations on room costs in the projects consistent with the cost index changes.

In addition, the Senate adopted an amendment to base the adjustments on mortgage limits and dollar per room limitations in public housing on a comparison between price index for 1968 and 1965 rather than 1968 and 1967.

Two of my housing bills dealt with statutory limitations on per room costs. H.R. 603 would provide for a $1,000 per room increase in the statutory limit on the cost of low-rent housing projects. H.R. 10194 has a provision which would allow the Secretary of Housing and Urban Development to increase the cost limitations in order to reflect increases in construction costs for a particular geographic area. Construction costs are skyrocketing, and the limitations must be revised realistically.

A provision, which appears in the Senate bill and not in the House bill, is one affecting public housing which was introduced by Senator BROOKE. This provision, section 211 of the Senate bill, would limit a public housing tenant's rent to 25 percent of the tenant's income. The difference between the 25 percent of the tenant's income and the amount of money needed to operate the project—including better operating and maintenance services—would be made up by annual rental assistance payments made by the Secretary. The BROOKE amendment authorizes $75 million a year for this purpose.

I urge the House conferees to agree to the Senate's section 211 in order to provide public housing to tenants of very low income who would otherwise not be able to afford it.

Both the House and Senate bills amend section 10(G) of the Housing Act of 1937 to "clarify existing authority" to fix the amount of annual contributions to public housing projects at an amount in excess of the debt service requirements.

As the administration has admitted, this is only clarifying language, which tells the Department of Housing and Urban Development to implement existing authority.

Operating expenses of the federally aided public housing program in New York City have increased to such an extent that tenants are facing increased rentals beyond their means. Given the limited financial resources of most cities, this problem can only be alleviated by increasing the amount of Federal subsidies which the Department of Housing and Urban Development is authorized to allocate to local public housing agencies. The need for a new subsidy formula, and not just clarification of existing authority, is illustrated by the situation in relation to New York City.

According to the New York City Housing Authority, routine operating expenses of the federally aided public housing program in New York City have increased 125 percent since 1952. Rents paid by tenants, related to their incomes, have increased 72 percent. The deficits to the public housing program which have resulted have grown so acute during the past few years that it has been necessary for the housing authority to withdraw funds from its reserves. Under established procedures, the accumulated reserve funds for the New York City Housing Authority should currently amount to somewhat more than $30 million. But the present balance, as of March 1969, is only about $12 million. Chairman Albert Walsh, of the New York City Housing Authority, has indicated that he expects complete exhaustion of reserve funds before the close of 1970, unless rents of tenants are substantially increased without regard to their ability to pay.

The alternative for New York, then, is total exhaustion of reserve funds in 18 months or an increase in rents that most tenants simply will not be able to meet.

At the present time, the Department of Housing and Urban Development contracts to pay annually to the New York City Public Housing Authority only the sum actually required for debt service on bonds issued for the capital cost of each public housing project. Although it is my interpretation, and the interpretation of New York City Housing Authority Chairman Albert Walsh, that HUD presently has authority, under section 10 (c) and (d) of the U.S. Housing Act of 1937, to pay the debt service plus 2 percent of the operational cost of a public housing project, HUD has taken the position that the basic statute needs to be clarified. HUD seems to believe that in order to pay the 2 percent specified in section 10 (c) and (d) of the U.S. Housing Act of 1937, it is necessary to have language which specifies that the annual contribution under any contract is not limited to debt service requirements.

In other words, the bill merely states that HUD has the authority to do what I believe it already has authority to do under the existing statute. This is clear from the testimony of Secretary Romney on July 15 before the Senate subcommittee in which he said: "The amendment—section 204 of S. 2620—would not, however, permit the annual contributions to exceed the statutory maximum now established by the U.S. Housing Act of 1937."

I have previously called upon Secretary Romney to increase the subsidy for public housing in New York City to the statutory maximum through administrative action.

In light of the increasing operating costs which many public housing agencies are experiencing, I believe that mere clarifying language is an insufficient remedy for the problem. What is required is an increase in the present statutory limit.

In order to achieve that end, I have introduced H.R. 10194, which changes the present subsidy formula so that the formula would specifically include debt service plus 1 percent and an additional amount "to the extent required to permit low-rent housing to continue to fulfill its goal of providing housing at rents which families of low income can afford to pay, taking into account such routine operating costs of the projects involved (including the cost of providing adequate security for tenants) as may be necessary or appropriate for the purpose."

In effect, H.R. 10194 would make it possible for the Secretary to determine the subsidy formula required to maintain rents at a level which low-income families can afford, taking into account normal operating expenses and particularly the cost of police protection for tenants, which, in most large cities is urgently needed. Rising crime rates in public housing projects in New York City are alarming—so much so that tenants feel compelled to organize volunteer groups to protect themselves.

My bill makes it clear that the new subsidy formula set forth in the bill would apply to existing projects as well as projects completed after the enactment of this legislation.

In view of the escalating costs of public housing agencies, I believe it is imperative that this body adopt a formula such as the one embodied in H.R. 10194. To accept only a "clarification" in language which I believe already gives clear authority to the Department of Housing and Urban Development to pay debt service requirements plus 2 percent of operating costs falls far short of what is required.

MITCHELL-LAMA

Last year, the Housing and Urban Development Act of 1968 included an amendment, which I proposed, making the section 236 interest subsidy program applicable to State and locally financed middle-income housing approved for the interest subsidy program prior to completion of construction.

It did not apply to existing projects, and there are many existing projects which need assistance in order to keep rents, carrying charges and interest rates within reach of middle-income residents. Therefore, I introduced H.R. 49—H.R. 4308 with cosponsors—to extend the section 236 interest subsidy programs to existing projects.

The problem is illustrated by the Mitchell-Lama program in New York—a program intended to provide middle-income housing. However, high interest rates and high construction costs, have resulted in rents and carrying charges that middle-income people are unable to afford. Many of the original tenants of Mitchell-Lama housing find it impossible to remain in their homes, having invested most of their savings to make the equity payments on their apartments.

The Mitchell-Lama program is in severe financial difficulty. Approximately 58,000 units of Mitchell-Lama housing—which originally was supposed to be financed at interest rates of 3 percent to 3½ percent—are on temporary financing at 4½ percent. It is expected that permanent financing will be at a rate of at least 6 percent. This means that fam-

ilies living in Mitchell-Lama developments will have to pay a large increase in their monthly carrying charges—an increase of 20 percent or higher.

I have prepared an amendment, similar to H.R. 49, which would include projects built before 1968 under the section 236 interest subsidy program. It would affect Mitchell-Lama-type housing in seven States—New York, Connecticut, Illinois, Massachusetts, Michigan, New Jersey, and Pennsylvania.

It is essential to keep carrying charges and rents at a level commensurate with the income of middle-income tenants.

Interest subsidies for pre-1968 Mitchell-Lama-type projects would cost less than subsidies to privately financed projects because these projects have interest rates which are already lower than the regular market rate.

If middle-income citizens are to be able to live in housing which they can afford and still remain in the inner city, then they need assistance in coping with spiralling interest rates.

I certainly hope the committee will bear this problem in mind when we consider the bill under the 5-minute rule.

SECTION 236

The House bill increases by $25 million—from $75 to $100—as of July 1, 1969, the aggregate amount of contracts that the Secretary of Housing and Urban Development may enter into to provide interest subsidies.

The House bill similarly provides for an increase as of July 1, 1969, of $25 million for the section 235 homeownership program. However, the Senate bill does not increase the amount for these programs until July 1, 1971, and then to $170 million.

The House has recognized the need to increase the amount in order to meet current needs. Earlier this year I introduced supplemental appropriations bills to provide the full authorized amount for section 235 and 236.

Section 236 provides that a tenant pay a fair market rental determined by the owner's payments on the principal, interest, and mortgage insurance premiums. Rent is defined as the basic rental charge or more, equal to 25 percent of the tenant's income. However, the rent cannot exceed the fair market rental charge.

Because of the high costs facing owners of rental housing, rents reach the 25-percent mark, thus creating hardships for tenants, who cannot afford to pay 25 percent of their income.

Inasmuch as the section 235 homeownership program is based upon 20 percent of income, I believe it would be equitable to make 20 percent the figure for a tenant who pays rent or a cooperator who pays carrying charges.

RENT SUPPLEMENTS

The House bill does not increase the contract authority available for the rent supplement program. However, the Senate bill increased the contract authority by $82 million beginning with fiscal year 1972. The Senate bill also would allow the Secretary of Housing and Urban Development to increase from 20 to 40 percent, the maximum amount of rent supplement units in housing receiving section 236 interest subsidy.

I have expressed my concern to Secretary Romney with the fact that only 20 percent of the units in a section 236 project could be occupied by rent supplement tenants and have sponsored remedial legislation. I support the Senate change, and I urge the House conferees to accept it.

The problem of high rents also plagues the rent supplement program. Large families are forced to pay rents that they really cannot afford. There are two ways that this problem can be solved:

One, which is envisioned in my bill, H.R. 608, is to increase the rent supplement payments for tenants with larger families. The annual payments made by the tenants would be reduced by $200 for each member of his family, other than himself and his wife, who has no income.

The other way to cut rents is to reduce the requirement that a rent supplement tenant pay 25 percent of his income for rent to 20 percent, as I have proposed, under the section 236 interest subsidy program.

The rent supplement program must be relevant to the needs of the people it is supposed to serve. It is not relevant when in New York City, for example, the maximum income limit for eligibility is $6,100. There are many needy, low-income families that cannot participate in the program because their income is $6,100. In New York City the highest income of a rent supplement tenant is $5,450 with a family of seven.

In order to make the rent supplement program work more effectively, the formula should be changed by relating it to family size or by cutting the percent of income he must pay in rent to 20 percent.

LEAD POISONING

Lead poisoning is a silent epidemic affecting thousands of young children in the substandard housing of our urban slums.

This is not a disease whose cause and cure is unknown.

Its cause is lead-based paint which lines the interior surfaces of dilapidated housing. The paint peels and falls off within easy reach of young children, who often eat it.

I have introduced three bills to deal with this problem.

H.R. 9191—H.R. 13256, with cosponsors—establishes a fund in the Department of Health, Education, and Welfare from which the Secretary may make grants to local governments to develop a program to identify and treat individuals afflicted by lead poisoning—$7.5 million would be authorized for this purpose annually for 3 years.

H.R. 9192—H.R. 13254, with cosponsors—would authorize the Secretary of Housing and Urban Development to make grants to local governments to develop programs for the detection of the presence of lead-based paints and to require that owners and landlords remove it from interior surfaces; $13.5 million would be authorized for this bill annually for 3 years.

And H.R. 11699—H.R. 13255, with cosponsors—would require that local governments submit and have approved by the Secretary of Housing and Urban Development an effective plan for eliminating the causes of lead-based paint poisoning as a prerequisite to receiving Federal funds for housing rehabilitation or code enforcement.

The elimination of lead-based paint poisoning and the elimination of such paint from inner city housing is an urgent task which this legislation will help to accomplish.

Mr. Chairman, I should like to briefly mention a number of bills which I have introduced in the areas of public housing, urban renewal, relocation, and cooperative housing. All of these legislative proposals would increase the supply of low- and moderate-income housing and also make our housing policies more humane and equitable. I urge the Committee on Banking and Currency to give them prompt consideration.

PUBLIC HOUSING

My concern has constantly been that the public housing program is falling far short of its purpose: to provide standard housing to people at low cost. The program has been slow, unresponsive to large families, and unreflective of the needs and demands for the program. I have introduced a number of bills to make the program more responsive.

H.R. 601 would amend the 1937 Housing Act to remove the existing per centum limit on the amount of assistance which may be provided under low-rent housing in any one State.

Public housing should be built where the need is greatest and not on the basis of an artificial quota system.

H.R. 604 would amend the 1937 Housing Act to provide that a tenant in low-rent public housing not be evicted without a public hearing.

This is consistent with American ideals of justice. Present legislative and administrative regulations do not require that the tenant be afforded due process of law and the right to present his case.

H.R. 607 would broaden the opportunities under the 1937 Housing Act for occupants to purchase units they are living in.

This bill would make it possible for all or part of a public housing project to be converted to a nonprofit cooperative housing corporation or trust fund formed by occupants of the project.

URBAN RENEWAL

The urban renewal program has too often ignored the housing needs of the poor both in the planning and the administration of the program.

H.R. 597 amends the 1949 Housing Act to prohibit construction of luxury housing in the redevelopment of urban renewal areas.

It would also insure that all the housing built on renewal sites be low and moderate income in nature.

H.R. 606 amends the 1949 Housing Act by removing the 12.5-percent limit on the amount of grant assistance which may be provided under urban renewal for one State.

This is an artificial quota which is cutting back on urban renewal which is greatly needed in our metropolitan areas.

RELOCATION

I introduced seven bills, H.R. 597, 598, 599, 600, 609, 10266, and 10651, which would substantially improve the proce-

dures of relocation caused by urban renewal programs.

These bills aim at a fair, just, and humane method of relocation.

COOPERATIVE HOUSING

I have introduced two bills, H.R. 51 and H.R. 596, to deal with cooperative housing.

H.R. 596 would amend title II of the National Housing Act to provide Federal Housing Administration mortgage insurance for individuals purchasing dwelling units in cooperative housing projects in the same way that such insurance is provided for individuals purchasing other single-family residences.

H.R. 51, the Cooperative Rehabilitation Housing Act, which would provide Federal assistance to enable tenants of multifamily housing in low and moderate income urban areas, organized as cooperatives, to acquire and rehabilitate such housing.

It would further the opportunities for homeownership similar to the provision for section 235 homeownership for lower-income families programs authorized in the 1968 Housing and Urban Development Act.

Mr. Chairman, the issues which I have brought up today are essential to this country's goal of "the realization as soon as feasible of the goal of a decent home and suitable living environment for every American family" which was set in 1949.

I urge the House to remember how far from that goal we are and to act to fulfill the hopes which have been kindled for so long.

Mr. FEIGHAN. Mr. Chairman, I urge support of H.R. 13827, the Housing and Urban Development Act of 1969.

Last year, Congress enacted the most progressive piece of housing legislation in our history. The 1968 Housing and Urban Development Act was designed to be a 3-year start toward achieving the goal of building 26 million units within the next 10 years.

The primary purpose of the 1968 act was to depart from traditional concepts of Federal subsidization of housing in an effort to provide a decent home and a suitable living environment for every American family. It was the feeling of Congress that the necessary resources and capabilities existing in the public and private sectors of the economy had not been marshaled. Thus, Congress sought to utilize more fully private enterprise and individual self-help. Sections 235 and 236 of the 1968 act exemplified this philosophy. Those sections authorized new subsidy programs to reduce mortgage interest rates for lower income families to as low as 1 percent. These low interest rates would enable families to improve their living conditions.

Substantial progress has been made under previous housing legislation. Federal participation in housing has resulted in job creation, business development, economic growth, environmental improvement, and human development.

However, pressing problems remain which require our immediate attention. As a nation, we have failed to keep pace with our ever-increasing needs for more and better housing.

The 1969 Housing and Urban Development Act before us today represents an accelerated effort to accomplish the vast housing goals set forth in the 1968 act.

Among its provisions, H.R. 13827 would amend sections 235 and 236 by increasing the amount of contracts HUD may enter into under each program in the current fiscal year from $100 million to $125 million. This increased authorization is necessary in view of the spiralling land and construction costs and high interest rates.

H.R. 13827 would also increase the percentage of homeownership assistance payments which could be made for existing housing under section 235. The gradual reduction of the percentage, as provided by the 1968 act, must be delayed since the tight credit market has so significantly curtailed new housing starts.

Another section of H.R. 13827 would increase the per dwelling unit limitations on mortgages purchased by the Government National Mortgage Association from $17,500 to $22,000. The basic $17,500 limitation has been unchanged since 1959. In recent years, however, this limitation has proven unrealistically low. It has inhibited the use of section 221 (d)(3) below-market interest rate programs in many high cost areas, including Cleveland.

H.R. 13827 has a number of other provisions which would expand existing programs. The model cities program is authorized an additional $750 million for fiscal year 1971, while funds for the urban renewal program would be increased by $2 billion. These programs must be expanded.

Other important provisions of H.R. 13827 would expand the neighborhood development and flood insurance programs and remove the income limits for loans under the rehabilitation loan program.

Mr. Chairman, we appear to be in the first stage of a national housing recession. New housing starts have fallen off and, if the present rate continues, could drop below 1 million—about half of last year's rate—by this coming January. Increased costs due to inflation have placed homes beyond the financial means of millions of Americans. The inability of people to raise money for housing has consequently hurt the housing industry and, particularly, the smaller builders and contractors who support it. As a result of this vicious circle, thousands of employees are losing jobs.

Mr. Chairman, it is imperative that we enact the Housing and Urban Development Act of 1969, which would help to reverse these undersirable trends. We must move on toward our stated goal of decent housing for every resident in the United States.

Mr. EILBERG. Mr. Chairman, I rise today for the purpose of expressing my opposition to the amendment which I have been advised will be offered by the gentleman from Illinois (Mr. ANDERSON). This amendment has been called the breakthrough amendment and at first blush it appears that to oppose it would be like voting against motherhood and the flag. I encourage those of you who have not read the material which the Building Trades Department of the AFL–CIO sent to all our offices to do so to get an in-depth look at the highly objectionable results which adoption of this amendment could bring.

Mr. Chairman, I am confident that the Members will study the Anderson amendment carefully and not be caught up in the mumbo-jumbo of the governmentese and high sounding phraseology which no doubt will be used in this Chamber in an effort to gain support. I want to make it quite clear that I do not oppose the use of the best of the new building techniques in the attempt to meet the pressing housing needs of the Nation neither do the Building and Construction Trades Union. However, I do believe that adoption of this amendment will set up the Secretary of the Department of Housing and Urban Development as a housing czar with the authority to dictate terms of collective bargaining agreements and scuttle existing agreements which are lawful under the National Labor Relations Act. The effect of this amendment would be counterproductive in my opinion and would severely disrupt labor-management relations. I oppose letting the Secretary of Housing and Urban Development become a housing czar. The amendment provides no safeguards against arbitrary and discriminatory action. This amendment fails to take into account the complex issues and delicate problems which are involved. It should not be considered without public hearings and extensive legislative redrafting.

Mr. TUNNEY. Mr. Chairman, the lack of adequate housing in this country is a disgrace which is fast reaching the point of disaster. We move further and further from our goal of a decent home and a suitable living environment for every American family, announced in 1949. Increased building costs and a credit crunch have dimmed the hope of constructing 26 million new units in the next decade, include 6 million new publicly assisted units.

The destructive impact of poor housing is incalculable. The costs of the blight in housing skyrocket, while we squander billions in space, and feed the insatiable appetites of the Pentagon. Our priorities are tragically out of balance. We must rechannel some of our billions to defend our environment and to explore ways and improving our quality of life.

Early efforts to meet the housing needs of the poor only intensified the problems which wrack our cities. Public housing massed the poor in penitentiary-like monoliths which quickly became dilapidated and ridden with crime. The rent supplement program compounded the problem of concentrating the poor in ghettos.

I voted for the rent supplement program when it was proposed. The concept of rental assistance at its inception promised those most in need an opportunity to break out of the ghetto. This opportunity proved to be an illusion. Subsequent appropriations contained a proviso that certain local bodies could veto construction of rent supplement projects in their areas. Projects were therefore built in blighted areas. The program in practice served only to perpetuate the

worst evils of public housing. I could not support the program in this form.

A new approach was charted in the Housing Act of 1968. Section 236 of that act authorizes direct interest rate subsidies on new projects for moderate as well as low-income persons. At the same time up to 20 percent of the unions in a 236 project can be supported by rent supplements.

Now for the first time we have the opportunity to support construction of housing projects outside the ghettos, in which not all the tenants will share the same level of degrading and demoralizing poverty. This is bound to enhance the pride and initiative of those who rely on rent supplements until their incomes rise.

No projects have yet been completed, but of the almost 500 which have been approved, a significant number—288—are located in the suburbs and in outlying urban areas.

The Housing Act of 1968 also charted a second significant course designed to enhance the dignity and independence of the poor by authorizing homeownership assistance payments. These payments can help those with low incomes purchase one or two family homes, condominium units, or enable them to become members of a cooperative association, which may have previously been a publically assisted rental project.

Together, the interest reduction and homeownership assistance programs offer a real possibility of achieving our goal of building 6 million new publically assisted units during the 1970's. Even at the start, however, it is critically uncertain whether we are going to carry these programs forward with enough momentum. H.R. 13827 raises the aggregate amount of contracts which the secretary can enter to make both homeownership assistance and interest reduction payments.

I seriously question, however, whether the amount of the increase—from $100 to $125 million, in addition to the $75 million already authorized prior to July 1969, is sufficient even if these authorizations were reflected in actual appropriations—which they decidedly are not—neither program would approach the $1 billion level for years to come. Is this too much to pay for a program which promises to relieve this dreary existence of those with low or moderate incomes who are forced to live in housing which is crowded and inadequate? I do not think it is too much to ask to devote a small fraction of our national budget to this important goal.

It is also essential to increase the limitations on construction of publicly assisted housing units to realistic levels, which reflect actual construction costs. I am pleased to see that the bill attempts to meet this problem, but it does not appear that the limits are made flexible enough to stimulate greater activity in high cost urban areas.

Considering the changes in the program that have been wrought by section 236, I am disturbed by the fact that the bill does not make provision for additional increases in the rent supplement contract authorization for the 1972 fiscal year. The bill as passed in the Senate provides $82 million for this purpose. The Senate bill also increases from 20 to 40 percent the percentage of units in a 236 project which may be occupied by tenants receiving rent supplements. With the passages of the Housing Act of 1968, rent supplements offer a true opportunity for low income persons to escape the confines of the ghetto, and to move closer to available jobs better schools and recreational facilities. I therefore urge those who have opposed this program in the past, as I have, to give it renewed consideration.

H.R. 13827 fails to make any provision for extending FHA mortgage insurance in the case of loans for the purchase of mobile homes. I believe that such a program should be available for persons who use a mobile home as a principal place of residence. There are now 6 million Americans who live in mobile homes. For substantially all low-income persons, mobile homes provide the only housing which can be purchased for $12,500 or less. The days are over when trailer parks constituted slums on the fringes of our cities. Mobile home courts today are well designed, landscaped, and provide necessary community facilities.

Availability of FHA loans on mobile homes would produce dramatic reductions in monthly financing costs. Interest rates on noninsured loans are now 12 percent and more.

We should put an end to a situation where high interest rates make it impossible or extremely burdensome for persons with low incomes to resort to the only form of low-cost, mass-produced housing on today's market. I do not believe that such a step would siphon money away from conventional home financing, and it would provide for a range of choices of low-income housing.

I support the application of technological breakthroughs in the construction of residential housing. I have cosponsored legislation which would assist in developing uniform building codes which are today a major obstacle to the construction of economical, high-volume housing. I do not believe, however, that it is necessary to grant the Secretary of Housing and Urban Development vague, but broad powers to intrude into matters involving union practices. It is clear that coordinated efforts on the part of labor, business, and Government are necessary to solve the problems of introducing new approaches into the building industry. I do not feel that the way to begin solving these problems is by granting bureaucratic power to interfere with the collective bargaining process. I therefore oppose any amendment which would have this effect.

In general, this bill serves effectively in implementing existing housing programs. It holds out the hope that our efforts to ease a severe housing shortage and to relieve urban blight may at last be picking up speed.

I am encouraged to see that new impetus is given urban renewal through further bolstering of the model cities and NDP programs.

Hundreds of communities have adopted NDP programs. However due to a limitation on funds imposed by the Bureau of the Budget, the projects have been delayed. Present law limits eligibility to 3 years. I cosponsored an amendment which extended the period of eligibility for an additional year. The committee adopted this amendment which prevents the loss of local noncash credits for hundreds of communities with NDP applications currently pending.

A similar situation exists with respect to Federal grants for water and sewer facilities. The Housing Act extends for an additional year the eligibility of application under the water and sewer program.

I am also pleased that the bill extends the national flood insurance program to cover losses from water-caused mudslides. I believe we should go even further and include damage from earthquakes and resulting earthslides. I have introduced legislation which would cover losses from such natural disasters, in the absence of a comprehensive insurance program to protect against a wide range of natural disasters, a provision to cover mudslides marks an important step forward.

Mr. FRASER. Mr. Chairman, I want to add my support to the Housing and Urban Development Act of 1969, H.R. 13827. I know that this legislation will significantly improve the effectiveness of our on-going housing and urban development programs.

I am particularly pleased that H.R. 13827 emphasizes the importance of the neighborhood development program—NDP—the new system of urban renewal authorized by the 1968 Housing Act. NDP was intended to streamline the cumbersome renewal process which often involves periods of up to 10 years between planning and completion of renewal projects.

The committee report for H.R. 13827 comments on the popularity of NDP as evidenced by the positive response of local communities to this new program. Since the inception of the program, 35 cities have received NDP grant contracts. More than 280 other communities, including my district—Minneapolis, Minn.—have NDP applications on file with HUD or are about to submit applications. The report states:

> This initial reaction to NDP confirms the committee's judgment that this was a desirable change and should serve to accelerate renewal efforts.

The report goes on to stipulate that administrative regulations affecting NDP should be no more restrictive than regulations affecting conventional renewal projects. It is fortunate that this language was included in the report because I am afraid that the Department of Housing and Urban Development may not share our enthusiasm for NDP. We have received indications that HUD intends to impose certain new restrictions which could make NDP even less flexible as a renewal tool than the conventional project system. Such restrictions would seem to be in clear violation of the intent of the 1968 act, as well as in violation of the intent of the legislation before us today.

A large number of us here in the House

have been distressed by the reports that HUD intends to downgrade NDP. In order to express our concern, 85 of us today joined in sending the following letter to Housing and Urban Development Secretary George Romney:

Hon. GEORGE ROMNEY,
Secretary, Department of Housing and Urban Development, Washington, D.C.

DEAR MR. SECRETARY: We want to indicate our deep concern about certain proposals under consideration by your Department to restrict the operation of the Neighborhood Development Program. The restrictions discussed in your October 3 press release would, in our opinion, destroy the long-term effectiveness of NDP as a tool to aid the redevelopment of communities in our districts.

We can appreciate the current financial restraints under which your Department must operate but we do not believe that this situation justifies restrictions which would alter the nature of the program. According to your October 3 release communities will only be able to use NDP to fund those limited kinds of renewal activities which can be completed in two years. This condition automatically eliminates all projects involving acquisition or relocation activities which involve even modest complications. Such a restriction is certainly not consistent with the HUD description of the program which prompted our cities to submit applications. Many of our communities had hoped to use NDP to fund major citywide renewal efforts but this option will effectively be foreclosed by your proposed restrictions.

We are also concerned about restrictions being placed on the conversion to NDP of projects currently approved under the conventional system. Conversion would permit the allocation during the current fiscal year of funds already appropriated by Congress and already reserved for renewal activities in many communities with pending NDP applications. Since the need for immediate redevelopment action is so great in so many of our communities, we can see no value in large amounts of renewal funds lying idle merely because administration restrictions do not permit their transfer.

As you know, the 1969 housing bill reported by the House Banking and Currency Committee, H.R. 13827, stipulates that $400 million in FY 1970 urban renewal funds be earmarked for NDP and that 35% of all urban renewal appropriations in succeeding years be earmarked for NDP. In addition, the report on H.R. 13827 stipulates that administrative regulations for NDP should be no more restrictive than regulations for conventional renewal. Although this bill has not yet been adopted by Congress, it would seem inappropriate for the Department to issue guidelines that would violate the intent of pending legislation which has been favorably reported.

We are convinced that the Neighborhood Development Program holds the key to a new and more effective system of urban renewal, and we want to conclude by urging you to reject any proposals which will weaken this important new tool.

Sincerely,

Brock Adams, Carl Albert, Bill Alexander, William Anderson, Thomas L. Ashley, Ray Blanton, John Blatnik, Edward Boland, John Brademas, William S. Broomfield, Daniel Button, Frank M. Clark, Don H. Clausen, William Clay.

Mr. DONOHUE. Mr. Chairman I urge and hope that the House will approve this bill before us, H.R. 13827, the Housing and Urban Development Act of 1969. This measure provides for a 1-year extension of the Federal Housing Administration's mortgage insuring authority, authorizes funding for fiscal 1971 urban renewal and model cities programs, expands, and improves related housing programs, and speeds up the procedure for temporary protection under the flood insurance program.

Under title II I would like to emphasize the importance of the two sections affecting the neighborhood development program that is so closely related to the model cities program. Section 202, under title II, would reserve at least $400 million of fiscal 1970 renewal funds and 35 percent of fiscal 1971 urban renewal authorization for neighborhood development programs.

Section 203 recommends an extension, from 3 to 4 years, of the period of eligibility for local grant-in-aid credit and urban renewal and neighborhood development projects for pending applications filed on or prior to enactment of the bill.

Mr. Chairman, decent housing in a decent environment for our American citizens and families is absolutely essential for the existence and progress of a stable and productive society. Obviously, from the testimony of experts, this foundation pillar of our society is in a tragically weak and decaying condition.

It must be renewed, shored up and strengthened by every reasonable means at our disposal if we intend to preserve this American society and encourage its progress in our original concept of making this country the best place on earth in which to live.

The voice and testimony of authority tells us that simply to house new families and to replace the normal demolition of old housing units will require the construction of 20 million new dwellings over the next 10 years.

In addition, 6 million new or rehabilitated units are needed for lower-income families now living in big-city slums slated for renewal.

Mr. Chairman this gigantic task is beyond the resources and capacities of our various communities by themselves; they urgently and desperately need the continuing financial assistance of the federal government to carry on and out the enormous job of rehabilitating themselves and providing decent housing for their elderly, their low- and middle-income families. Over these past several years the Congress has recognized and attempted to respond to the urgency of this nationwide housing problem and particularly so when we approved the original model cities program and the Omnibus Housing Act of 1968.

In these legislative actions we pledged the word of the Congress and the resources of the country to the wholesome objective of providing decent housing for American citizens, improving their environment, and rehabilitating the slum areas within most of our cities.

Mr. Chairman, relying upon this congressional pledge and trustful of the executive department's cooperation, many American cities, like my own home city of Worcester, Mass., and other communities within my district have invested substantial amounts of community money as well as much time and overtime of community officials and sacrificing citizen volunteers in applying for Federal assistance and looking forward to implementing the planning and preparations that they have made to bring new life and hope and health and opportunity to their fellow citizens, neighbors and friends.

Right now, my home city of Worcester, which has a nationally recognized reputation for community dedication, planning, and fulfillment of housing and other programs, is waiting upon approval of action funds to carry out our model cities and neighborhood development programs.

Of course, there are many other communities throughout the country that are also waiting for the good word from the Housing and Urban Development Department. We hope that this administration and the Department will not disappoint them and it is up to us, in the Congress, to try to insure that they will not be disappointed and that all their dedicated work and efforts will not have been in vain.

This bill before us, however imperfect and however much many of us would like to expand its range and effort, is still a further forward step towards providing our American citizens with the decent housing and environment they desperately need and it offers us a further opportunity to demonstrate that the Congress will now and hereafter keep its own word and fulfill its own commitment.

Without question, this measure represents a prudent investment for the cure of a critical problem in the national interest at a most challenging period of our domestic history and I hope it will be, therefore, resoundingly approved.

Mrs. MINK. Mr. Chairman, I rise in support of H.R. 13827, the Housing and Urban Development Act of 1969.

Housing is one of our most pressing national problems. In Hawaii it is probably the biggest challenge we face. Admittedly, the legislation before us today does not attempt to deal with the core

of the housing problem, which is the lack of mortgage money compounded by high interest rates.

As the committee report says:

The Home building industry and the home buying public are confronted with the highest interest rates in a century and an inadequate supply of mortgage credit. This has sharply curtailed new housing starts and added heavily to the cost of both home ownership and rental housing. While this bill is not directed to that problem, the committee is deeply concerned over the steady escalation in mortgage interest rates and the serious shortage of housing, particularly the shortage of low-cost housing.

Nevertheless this bill will give us a few modest steps forward in this mammoth task. It extends the Federal Housing Administration mortgage insuring authority, provides necessary funding authorizations for fiscal year 1971 for urban renewal and the model cities programs, adds a number of improvements to rural housing programs, and makes an important new provision in the existing flood insurance program to make this protection promptly available.

What the bill cannot do, however, is force the Department of Housing and Urban Development to take full advantage of the authority conferred by Congress to meet the housing crisis. Our experience so far this year is that hundreds of millions of dollars remain unspent while thousands of our families desperately seek the housing they need. Some programs have been terminated; others are placed in a freeze. New guidelines are issued which force out longstanding applications. Meanwhile the backlog of requests for housing assistance mounts.

The Department now assures us that Operation Breakthrough will save the day. Meanwhile, the Tandem plan which would give Government funds high leverage in stimulating housing sales has been delayed, and the guaranteed mortgage-backed securities plan has been on the shelf for more than a year. Now HUD says the plan will be limited initially at least to the pass-through type of security which is really just mortgage participation.

One would hope to see better effort from HUD than this, and the Nation's prospective home buyers and apartment renters are denied what could be highly effective assistance.

Just recently the Department issued new guidelines for the neighborhood development programs which again thwart congressional intent. Potentially, highly deserving projects in Honolulu and Hilo, Hawaii, could be affected by this, and I have asked the Secretary to approve these projects for funding notwithstanding any changes in the guidelines. So far only 35 of the 150 cities that applied have received grants because the administrative restrictions on conversion from conventional urban renewal have tied up large amounts of available funds. I suppose the answer is that retrenchment is the keynote of this administration which has cut back Federal construction by 75 percent.

I support the adoption of this legislation, but I also hope that we can do more than this to meet our housing problems. Prompt, far-reaching measures are needed to provide adequate housing for the many citizens of Hawaii and other States who are currently staying in inadequate or substandard facilities.

Mr. COHELAN. Mr. Chairman, I rise in support of H.R. 13827, the Housing and Urban Development Act of 1969. There are many good features in this bill, but I would like to focus on those programs that affect the core cities. It was only a few short months ago when I, together with many of my colleagues, attempted to restore needed funds to the 235 and 236 programs. We were unsuccessful in this fight. The 235 program provides homeownership assistance payments to our less fortunate citizens. The 236 program provided interest subsidy payments for rental housing.

In the prior appropriations bill, the funds available for this program were cut by $50 million. As I pointed out during that debate, there is the culminative effect of this cut of over $1.5 billion because every dollar in the 235 and 236 programs builds $12 worth of housing. I was happy to see that the Banking and Currency Committee shares the view of the necessity of these programs and increased the authorization by $25 million for both the 235 and the 236 programs. This represents an enlightened attitude toward partially meeting the problems of urban decay. I support this new $125 million authorization for new contract authority under the 235 and the 236 programs. This figure represents a minimum investment. If the economic situation were different I would support even greater increases in these programs. Coming from a district that has had experience with these programs, I am in a position to know what these programs mean to urban renewal efforts.

I am happy to note that the committee revised the percentage of contracts available for existing housing to 30 percent under the 235 program. This, I feel, provided needed flexibility in the 235 program since the new and rehabilitated housing has been hard hit by the continued inflation and remains out of reach for the underprivileged citizens that the 235 program was designed to help.

There are other sections that I feel must be commented on. I know from firsthand experience the problems that are besetting the neighborhood development program. Representatives of the Oakland and Berkeley redevelopment programs have worked with me in attempting to secure the needed funds for the already approved programs. The confusion and the delay is not unknown to many of my colleagues on both sides of the aisle. It was this experience that forced me to recently join in a letter signed by a bipartisan group of 85 House Members to Secretary George Romney decrying the handling of the NPD programs. My reason for supporting this action was my experience with the programs in Berkeley and Oakland and the October 3 press release from HUD stating that only projects that can be completed in 2 years can be funded by NPD. This is not consistent with the earlier HUD description of the program which prompted many of our cities to engage in needed and widespread renewal efforts using the NDP funding approach rather than conventional grants and loans.

While I realize the economic pressures that can make such cuts in spending look attractive and even necessary, I cannot escape the feeling that these inflationary cuts and bureaucratic readjustments are being taken out of the programs that serve to ameliorate festering social needs that cry for action. It is for these reasons that I was pleased to see that the Banking and Currency Committee increased urban renewal funds by $2 billion on July 1, 1970 and reserved $400 million of fiscal year 1970 renewal funds and earmark 35 percent of fiscal year 1971 urban renewal authorization for funding neighborhood development programs.

I was especially pleased to note in the committee report the recommendation that these cities which have undertaken urban renewal under the NDP be not more administratively restricted than those cities seeking assistance under regular renewal projects. This, I feel, is vital. Many cities were aggressively pressed into accepting the NDP method of urban renewal because it was billed as the ways of the future, and now their money is tied up in "agonizing reappraisals," "bureaucratic restructuring," and a host of other terms that mean the same thing—no money for approved projects. I commend the committee for underscoring this point and for specifying that Federal grant contracts shall be written for 2 years instead of the present 1 year for NDP. This will facilitate the planning process for urban redevelopment.

I support the $750 million increase for the model cities program for fiscal year 1970. The use of the model cities approach to planning and effecting changes in urban problems, by using a variety of programs, seems to work. The use of this additional money for planning and implementing programs designed for education, job training, health, and slum conditions is a vital effort. The experience in Oakland and Berkeley has convinced me that in spite of small setbacks and limited visible accomplishments, the efforts of the model cities program should be continued and expanded. The needs of this country cry out for assistance, and only by adequate funding and administrating programs such as those like the model cities, can we hope to contain, to say nothing of defeat, the pervasive problems of poverty that ensnare so many of our citizens.

Mr. Chairman, I am first to admit that the Federal urban renewal programs can and should be tightened and restructured, but so much of the activity of the administration is reminiscent of a doctor applying a tourniquet to a patient's neck when there is bleeding in the finger. I would like to work with the administration in attempting to solve the problems of poverty and poverty-related ills. But this will not be accomplished only through administrative changes, although they are necessary. What is needed is a basic commitment on the part of the administration to find a solution to our social ills. This will not be found simply through small demonstration

projects, like Operation Breakthrough, although concepts like Breakthrough should be tested. What is needed is the allocation of money for strong and effective programs. I think that the NDP and the model cities program offered a hope that, pardon the expression, a breakthrough in these urban problems was possible. Even realizing the problems of inflated expectations and lack of available funds, these programs that I have discussed seem to hold some promise for halting the cancerous decay of our cities.

Mr. WHITEHURST. Mr. Chairman, the omnibus housing bill of 1969, H.R. 13827, is not as comprehensive as some of the housing legislation that has been considered in the past. It does, however, deal meaningfully with problems we are currently facing. For this reason it has my wholehearted support.

Currently we are faced with the problem of meeting the need for 2.6 million housing units per year for the next 10 years. These 26 million units must be supplied in spite of the current high rates of interest, the shortage of mortgage money, and the increase in the cost of housing construction.

To combat these problems this legislation not only extends the basic authority of our housing programs, but also liberalizes and expands these programs so that urban renewal and individual homeownership programs can be more effective, thereby reaching more people than is currently possible.

I am also pleased to see that the bill contains a liberalization and expansion of the flood insurance program extending this coverage to many thousands of people that might otherwise face financial ruin in the event of a physical disaster, such as Hurricane Camille. Mr. Chairman, I feel this is a good bill, and I certainly hope the House gives it favorable consideration.

Mr. PATMAN. Mr. Chairman, I am advised by the minority that they have no further requests for time, and I have the same situation.

The CHAIRMAN. Does the gentleman from Texas have any further requests for time?

Mr. PATMAN. I have no further requests for time, Mr. Chairman.

The CHAIRMAN. Does the gentleman from New Jersey have any further requests for time?

Mr. WIDNALL. I have none, Mr. Chairman.

The CHAIRMAN. Pursuant to the rule, the Clerk will now read the bill by title.

The Clerk read as follows:

H.R. 13827

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Housing and Urban Development Act of 1969".

PARLIAMENTARY INQUIRY

Mr. STEPHENS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. STEPHENS. I have an amendment to offer. It is to page 1, after line 4. Is it appropriate to offer the amendment at this point?

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. STEPHENS. I yield to the gentleman from Texas.

Mr. PATMAN. Mr. Chairman, I ask unanimous consent that the Committee now rise, and then the gentleman's amendment will be the first order of business tomorrow.

The CHAIRMAN. If the gentleman from Texas will suspend, as the Chair understands it, the gentleman from Georgia would like to know whether or not his amendment would be in order on page 1, line 4, at the end of the period after "1969"; is that correct?

Mr. STEPHENS. That is correct.

The CHAIRMAN. The Chair will say that such amendment would be in order now. If the amendment is at the desk, the Chair would suggest that the amendment be read and then, if by chance at the conclusion of the reading of the amendment the Committee should rise, the Chair assures the gentleman from Georgia that the first order of business will be to recognize him for 5 minutes in support of his amendment.

Mr. STEPHENS. I thank the Chairman.

AMENDMENT OFFERED BY MR. STEPHENS

Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STEPHENS: On page 1, after line 4, insert the following new section:

"SEC. 2. Section 305(g) of the National Housing Act is amended—

"(1) by striking out '$1,000,000,000' and inserting in lieu thereof '$2,500,000,000';

"(2) by inserting 'at par' immediately after 'and to purchase'; and

"(3) by striking out '$15,000', '$17,500', and '$22,500' and inserting in lieu thereof '$17,500', '$20,000', and '$25,000', respectively."

Mr. PATMAN. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FLOOD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 13827) to amend and extend laws relating to housing and urban development, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous relevant material on this bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

REPORT ON THE VIETNAM MORATORIUM

(Mr. EDWARDS of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EDWARDS of California. Mr. Speaker, those of us, who are in the words of our Vice President, "an effete corps of impudent snobs who characterize themselves as intellectuals," have, I believe a duty to report to this House and the Nation on the recent Vietnam moratorium.

I can claim no role in organizing this massive demonstration in favor of peace in Vietnam, but I have been a critic of the war in Vietnam for some time. If there are, to use again Mr. AGNEW's words "hard-core dissidents" among the protestors, I must be included in that group at least in the case of the Vietnam war.

However, I welcome the Vice President's remarks for I believe they put that recent demonstration of unity against the war in its proper perspective—a perspective of truth versus a false image. Those of us who took part in that demonstration know the truth, those who watched the demonstrations on television or read about them in the newspapers know the truth. Mr. AGNEW warned of "wilder, more violent" antiwar demonstrations, but I ask Mr. AGNEW what wildness and what violence? There was neither in the demonstrations in which I took part. Violence and wildness were absent across the Nation. Mr. AGNEW, or his speech writers, were looking through a flawed glass darkly and failed to see the truth shine through.

I would hope that the Vice President will not demean further his high office by name calling, or by half truths, or lack of truth in his statements. All of us have the right to question the views of others, to debate the issues, but we do not, I believe, have the right to turn debate into personal attacks, or into hair pulling political screaming matches. Let us speak our views, but respect the right of others to disagree.

In this respect I would like to report what I saw during the Vietnam moratorium, and I hope my vision is a little more clear than that of the Vice President.

I saw thousands of people, young, old, middle aged including the so-called forgotten American, making known through the right of assembly and of free speech his and her views in opposition to the Vietnam war. I saw them use these rights peacefully and effectively. I saw the students, much damned these days, put their hearts and souls into this effort to bring peace to Vietnam and to bring our soldiers home.

It was raining in California on moratorium day, a heavy rain of the kind the chamber of commerce likes to ignore. Even so, 4,000 Stanford University students sat in that downpour and listened to a parade of speakers. Earlier 1,300 students and 1,200 citizens rang 100,000 doorbells and handed out leaflets to residents of Palo Alto, Atherton, Menlo Park, Sunnyvale, Mountain View, and Los Altos. One hundred students rode Southern Pacific commuter trains passing out leaflets and talking to riders. In San Jose thousands of students participated in ceremonies at San Jose State College and Foothill and West Valley Colleges. Hundreds joined in at the University of Santa Clara.

I looked at those faces as they listened, and they were not all students. Businessmen, government workers, blue-collar employees, housewives, and senior citizens were all represented. One could not

classify these men and women, except to say they represented all of America.

My speech was directed to the students and in addressing them I commented:

John F. Kennedy told us the torch had been passed to a new generation. Today I join him in passing that torch to you. In a few short years those of you who are under 30 will make up the majority not the minority, in this nation. Some fear you. I am not one of them. You bring me hope, hope for a world far better than my generation has been able to create.

I repeat those words now, for they express my view not only of the students, but of all of those who joined in the Vietnam moratorium.

We should not fear citizen participation in the great debates of today's world. We should welcome them.

In this respect I welcome the Vice President's words and views, identical I presume with the views, if not the words of the President. They clearly define the lines of the debate and the intentions of the administration. As in the days of old the President will take the high road, the Vice President the low road, but both roads go in the same direction.

I would go in another direction.

And in the end I pray that we will be joined by the President and the Vice President, not because peace in Vietnam is the overriding will of the people, but because it is right.

But for those who are interested in response to the Vietnam moratorium, to the will of the people, I would like to share Monday's mail. We received 235 letters on the moratorium Monday morning. Of those letters, 232 were in favor of the moratorium. To be fair, I also should include one editorial against the moratorium in the San Jose Mercury. I believe, however, the letters indicate the feeling in my congressional district, perhaps weighted to the promoratorium side, but certainly in favor of our ending our involvement in the Vietnam war.

I believe the polls can be read in the same way. The division in this country today is not over peace in Vietnam, but on how to end American involvement in that war. It has to be ended.

Let us look again at the moratorium. It represents the brighter side of our Republic. It represents the people of this Nation asking for a redress of grievances. It represents our strivings for peace, and it announces our unity. There will be an end to the Vietnam war, and it will come in part because of the efforts of those of us who participated in the moratorium. We all pray for that day of peace.

CALIFORNIA COURT BACKS COMMUNIST: "TERRIFIED" THAT SHE IS OPPOSED

(Mr. WAGGONNER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, the Washington Post this morning carries the news that self-confessed Communist Angela Davis, assistant professor at the University of California, has been upheld by the Los Angeles Superior Court in her suit to retain her position in spite of the fact that she is a Communist and, as such, dedicated to the overthrow of our Government.

I call this to the attention of the House, not because I am at all surprised that a court has sided with a Communist, but to document for the record the background of this woman.

I am convinced that the time is going to come when the American people are going to rise up in unprecedented wrath and demand to know who slit the throat of this Nation and left it to bleed to death in the gutter. Perhaps it is self-preservation that prompts me to underline here in the RECORD that I was not part of the mob.

We have spent literally trillions in the past two decades fighting communism. Scores of thousands of American servicemen have been sent to their deaths fighting communism. And while all this agony was going on, communism has been condoned here at home by some, Communists have been and still are being paid salaries and subsidies with taxpayers' dollars and we have come to the point where a superior court judge can announce that he is "terrified" at the thought that a Communist can be fired by a university.

Historians are going to take hold of this era and shake it like a dog with a bone, to find out how this lunacy happened; why this Nation was so blind to the threat; so reluctant to take the first small step toward self-preservation.

The legacy which we as free Americans inherited from those who carved this Nation out of rock, trees and dirt is priceless. It cannot be squandered by one generation because this legacy carries with it the obligation to preserve it, add to it and pass it on to succeeding generations.

The story from this morning's Post is attached here with my remarks as well as a full report on Communist Angela Davis, taken from the Dan Smoot Report:

CALIFORNIA UNIVERSITY LOSES CASE ON RED

LOS ANGELES, OCTOBER 20.—The University of California Board of Regents' 29-year-old policy against employing communists was declared unconstitutional in Los Angeles Superior Court today.

Judge Jerry Pacht, in a strongly worded verbal opinion, specifically enjoined the regents from spending any more tax revenues in an effort to oust Angela Davis, an assistant philosophy professor at the University of California at Los Angeles, because she is a member of the Communist party.

Attorneys for the regents said they would have to study Pacht's ruling before deciding whether to appeal. However, it was considered virtually certain they would appeal.

In the two-hour hearing on a UCLA faculty-sponsored taxpayers' suit against the regents' actions in the Davis case, the judge repeatedly tore into the arguments of two regents' attorneys.

At one point, Pacht described as "terrifying" argument by regents' counsel Donald L. Reidhaar that the mere fact that Miss Davis was a Communist party member disqualified her from teaching at UCLA.

If this argument were carried to its logical extension, the judge said, it would mean that the regents would have the power to decide that membership in other organizations could—without reference to any unlawful acts committed—disqualify a person from employment.

In his verbal opinion, Pacht said he believed that if the courts failed to enjoin the regents in the Davis case it would be tantamount to determining that they had a right to make political tests in employing faculty members.

He cited the regents' own resolution of June 30 that "no political test shall ever be considered in the appointment and promotion of any faculty member or employee."

Pacht said the arguments of the regents and their attorneys that the Communist party was a special case that did not fall under this rule were not convincing.

IS COMMUNISM DANGEROUS?

In the spring of 1969, a 25-year-old Negro named Angela Davis received a two-year appointment as assistant professor of philosophy at the University of California in Los Angeles. She obtained the job (which pays $9684 a year—taxpayers' money) with the help of Professor Donald Kalish, chairman of the Philosophy department at UCLA. Concerning his own philosophy, Kalish has said:

"I am far to the left of the Communist Party." [1]

As a student, Angela Davis studied under marxist professor Herbert Marcuse. She says Marcuse strongly influenced her political thinking.[1] Marcuse, like Kalish, also considers himself left of the Communist Party. Marcuse says:

"The Marxian idea of socialism is not radical enough. . . . We must develop the moral-sexual rebellion of the youth." [2]

Marcuse has been indoctrinating students (and others) with communist dogma for more than a quarter of a century. Even before he became a naturalized citizen of the United States (1940), Marcuse was a research associate at Columbia University. During and immediately following World War II, he held important posts in the U.S. Office of War Information, in the Office of Strategic Services, and in the State Department's Office of Intelligence Research. Later, he was a professor of politics and philosophy in the Russian Research Center at Harvard. Since 1965, he has been a professor of philosophy at the University of California in San Diego. By 1968, he had become famous, on campuses from San Diego to Paris, as the philosopher of the new left and mentor of rioting anarchists. He was in Paris attending a UNESCO symposium on Karl Marx when communists instigated bloody riots at the Sorbonne.[3]

While studying under Herbert Marcuse at UCSD, Angela Davis was a revolutionary activist. She was a member of the Black Panther Party, and she participated in a demonstration of campus thugs who seized the university administration building.[1]

In July, 1969, it came to light that Angela Davis is a communist. She readily admitted that she is a member of the Che-Lumumba Club (an all-Negro cell of the Communist Party of southern California), and that she espouses Marxism. But she denied that she intended to "force her beliefs" on her students.[4]

On September 19, 1969, the Board of Regents of the University of California decided that the hiring of Angela Davis at UCLA violated the Regents' 20-year-old policy against employing communists as faculty members at any of the nine campuses in the University of California system. The Regents wrote her a letter saying she would "possibly be dismissed" because of her communist membership.[4]

Miss Davis announced that she had been fired. She accused the Regents of racism, saying they acted against her because she is a Negro, not because she is a communist. She retained a leftist lawyer (John T. McTernan [1]), and said she would appeal her case to the UCLA Academic Senate, and to the courts if necessary.[4]

Predictably, the Angela Davis case became

Footnotes at end of article.

a *cause celebre* for new-leftists and pampered adolescents (faculty members and students) of the academic world.

At San Francisco, the Academic Council (which is called the "faculty leadership" of the University of California) held an emergency meeting to resolve that it would no longer support the Regents' 20-year-old policy of prohibiting the hiring of Communist Party members. The Academic Council declared that "membership in the Communist Party cannot legitimately be made the basis for disqualification." [4]

The Board of Regents held another meeting on October 3, 1969, and resolved that Miss Davis "shall not be authorized to give instructions in any course under the jurisdiction of the school, department, or other academic agency approved by the Regents." [4]

Charles E. Young, UCLA Chancellor, denounced this Regents' action against Angela Davis as "a violation of the spirit if not the letter of justice and due process." [4] He did not cite any statute, constitutional provision, or legal precedent whose "spirit" requires American taxpayers to pay the enemies of our society for teaching youth how to destroy our society.

Chancellor Young said *he* considers Miss Davis "in every respect a full member of the faculty," despite the Regents' action. Young said *he* interprets the Regents' statement as meaning that Miss Davis can continue to teach at UCLA, and draw her salary, while appealing her case, though students will get no credit for taking her course.[4]

On October 6, classes opened for the fall session at UCLA. Unknown persons firebombed an information booth at a campus entrance, causing property damage estimated at $2250. A group of 20 Negro professors circulated pamphlets supporting Angela Davis, threatening to withhold credits from their own students as long as Miss Davis's students receive no credits.

John Parker, editor of *The Daily Bruin*, UCLA newspaper, said:

"She'd better teach or something's going to happen." [4]

She taught. Her first lecture was attended by an overflow crowd of 1900 students (with 100 turned away for lack of room), although only 169 students were registered for her course.

Described by reporters as "young, shapely, and miniskirted, her hair in African natural style," Miss Davis was, of course, lionized; and she obviously enjoyed it. Before ascending the podium, she made a brief statement for the benefit of the press and of her adoring audience, saying:

"I'd like to lecture. . . . I don't think we ought to allow the Regents to interfere." [4]

There was no indication that the Regents intended to interfere with the fired communist teacher who was flaunting their authority.

Angela Davis's course at UCLA is called "Recurring Philosophical Themes in Black Literature." Her opening lecture on October 6 dealt largely with Karl Marx (white), Herbert Marcuse (white), and Nat Turner (Negro).[4]

Nat Turner has become a towering hero-figure of Negro militants and their white toadies. He was a slave who tried to create an uprising of slaves in 1831, and was hanged after leading a mob of Negroes in a killing spree which is vividly described in a book called *Great Negroes Past and Present*.[5] With "righteous determination," and using "muskets, axes, and scythes," the book says, Nat Turner and his men "for forty-eight hours . . . roamed the plantations, leaving dead a total of fifty-five whites."

Angela Davis's contention that she was fired because she is a Negro is ludicrous. There are scores of Negro faculty members on the nine campuses under the Regents' supervision. None, besides Angela, has been fired.

It is obvious that Angela Davis was a Negro when she was hired at UCLA, and it is probable that she was hired *because* she is a Negro. In this regard, it is interesting to note that only eight of the 16 faculty members of UCLA philosophy department voted to hire Miss Davis, even though Donald Kalish, the head of the department, supported her strongly. Five members of the department voted against hiring her; three abstained from voting.[1]

There is intriguing irony in Angela Davis's contention that she was *not* fired because she is a communist. Robert Singleton (director of the UCLA Afro-American Studies Center) supported her contention, saying:

"It can be documented that there are white communists teaching at the university. Racism is the overriding issue in this case." [4]

Yet, Singleton refused to identify any of the white communist faculty members of the University of California, saying "We . . . know what would happen to them" if they were identified. While asserting that white communists are not fired because they are white, Singleton refused to name them for fear they would be fired if identified!

In another statement, Singleton said, "The regents' action has not only jeopardized Angela, but all faculty." University Chancellor Charles Young echoed the same sentiment, saying that feeling was high on the campus, because students and faculty members feared that the ouster of Miss Davis might be a prelude to the firing of other faculty members.[4]

Obviously, Singleton, Young, and other faculty members and students think Angela Davis was fired because she is a communist; and they fear that many others may be fired for the same reason.

The fact that one arrogant, miniskirted, hipswinging militant (communist or otherwise) could create such turmoil on an American campus, and get such broad support from faculty and student body, is a significant commentary on the condition of "higher education" in the United States.

Of even more significance is the question: How much damage can communist teachers do?

In *School of Darkness*, the late Dr. Bella Dodd (formerly a leading communist official, lawyer, and teacher at Hunter College in New York City) said:

"I . . . began to tear apart before my students many respected public groups . . . that were trying to better conditions. . . . This . . . had a destructive effect on . . . sensitive students. . . . I know I did much damage."

In *Witness*, Whittaker Chambers said:

"Every year the Communist National Students League was graduating its hundreds from the colleges. These were the first quotas of the great drift from Columbia, Harvard and elsewhere. These were the years that floated Alger Hiss into the party and made possible the . . . infiltrations of the Government, science, education, and all branches of communications, but especially radio, motion pictures, book, magazine and newspaper publishing. . . . A surprising number came of excellent American families. . . . From 1930 onward, a small intellectual army passed over to the Communist Party. . . . [carrying] the weak and stumbling American Communist Party directly into the highest councils of the nation."

The Angela Davis case brings into focus matters of grave importance.

Since 1946, our government has spent $182.6 billion on foreign aid.[6] This pillaging of taxpayers was necessary to combat communism, we were told.

Our government has spent about $75 billion maintaining U.S. troops in Europe since NATO was created in 1949—to defend the West against communism, we were told.

Grass had hardly covered the graves of our World War II dead, when thousands of American lives and billions of American dollars were squandered in Korea—ostensibly to stop the spread of communism.

In 1955, the U.S. Senate unanimously ratified the SEATO treaty (which later involved us in the Vietnam disaster), for the sole, alleged purpose of resisting communism.

If communism *is* a danger to the United States, why are such people as Angela Davis, Herbert Marcuse, Donald Kalish, Robert Singleton, Chancellor Charles Young (et al, ad infinitum) tolerated on the payrolls of tax-supported institutions? How long would such people have stayed on university faculties in the 1939–1945 period if they had extolled the glories of nazism?

If communism is *not* a danger, why has our government plundered us of trillions of dollars in the past 23 years to fight or resist communism?

If communism *is* a danger, why has every President since 1933 made a major policy of building bridges of friendship to communist countries?

Obviously, we have been betrayed and swindled by the liberal leadership which has dominated American life since 1933. Much of that leadership was produced in colleges infiltrated by communists.

With communists in our colleges, we are paying for the subversion of our youth and the ultimate destruction of our society. If we cannot remove the communists, we would be better off to close the colleges.

REVENUE SHARING—A PLUS

(Mr. NELSEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NELSEN. Mr. Speaker, if the American people are interested in seeing that the money they pay in Federal taxes is spent in the most productive manner—as I believe they are—then they should support the President's proposed revenue-sharing plan.

Untold millions of dollars have gone down the drain in the past decade as Federal funds have been poured into the stream of spending through a maze of bureaucratic agencies in an effort to solve the social, economic, and environmental problems affecting this Nation. We know that increased appropriations will not cure such problems when the machinery for effecting their solution is inadequate, inefficient, and ineffectual. What is necessary is the proper expenditure of funds in the best conceivable manner by local people committed to solving their problems efficiently and economically.

By returning to States and local com-

munities a portion of the Federal revenues each fiscal year, people within our States and communities will be given the financial means to plan and carry out effective courses of actions designed to meet individual community requirements. As State and local prestige and power are being built up through this method of working toward the resolution of our problems, the power and size of the Federal Government will diminish. This is a long-sought objective common to all political parties and to Americans everywhere.

INDIVIDUALLY TAILORED MANPOWER SERVICES

(Mr. HANSEN of Idaho asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HANSEN of Idaho. Mr. Speaker, I welcome the opportunity to support the administration's new Manpower Training Act. I am convinced that it is the first piece of social legislation in many years which comes to grips with a total problem. The problem is the chronic and persistent one of providing decent jobs for everyone who wants to work at the same time that the job market is becoming increasingly selective in terms of the education, skills, and experience a worker must possess to obtain and hold a decent job.

The most impressive feature of the Manpower Training Act from my point of view is that it would be possible to provide each person with whatever kind of help he needs to become employable. For the first time we can give him not only a complete range of skill training but basic education, remedial medical care, work orientation, on the job support—any service which will help an individual to get a steady job. In short, the full range of our knowledge in the field of education and training can now be utilized to develop an individual's potential. This is an exciting prospect and one which could enrich the lives of every American. An individual's leap from unemployment to meaningful productive employment not only means a gain in his self-respect and independence, but an additional skilled pair of hands and another alert mind to provide the essential goods and services we need.

ADMINISTRATION'S MARINE SCIENCE ACTION

(Mr. MOSHER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MOSHER. Mr. Speaker, for the past decade and especially in recent years, many of us have viewed with pride our Nation's explorations in space. I am particularly pleased to see that the Nixon administration has directed its attention to another important area, the oceans.

In its announcement last Sunday, the administration has selected five areas for special emphasis in the next fiscal year. Thus, the Vice President, as Chairman of the National Council on Marine Resources and Engineering Development, has once again asserted the national and international significance our Nation attaches to the oceans.

I am particularly pleased to see that one area of emphasis is the International Decade of Ocean Exploration. I consider the decade to be an imaginative initiative by our Government in the international arena, an initiative which holds out high hope of bringing many nations together in a joint effort to unlock and share the secrets of the deep. I am glad to see we are maintaining our international leadership in the decade by coming forward with U.S. proposals. I hope that the Congress will support this program by acting on the concurrent resolutions on the decade now before both Houses.

GILBERT REVISED COMPREHENSIVE SOCIAL SECURITY AND MEDICAL CARE (OASDHI) BILL

(Mr. GILBERT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. GILBERT. Mr. Speaker, the need to substantially raise the general level of social security payments becomes very clear to anyone who looks at the level of payments and considers the fact that most social security beneficiaries have very little in the way of continuing income other than what they get under social security. For almost all beneficiaries, social security payments are the main source of continuing income. For about half the beneficaries the social security payment is virtually the only source.

Furthermore, by Government definition, 20 percent of America's poor people are aged 65 and over.

BENEFIT INCREASES

The bill I am proposing today would help alleviate the income plight of the elderly by providing two 20-percent across-the-board increases in social security benefits. The first increase of 20 percent would be effective January 1970. The minimum benefit would be increased from $55 to $90. The second 20-percent across-the-board increase with a $120 minimum benefit would be effective January 1972.

Monthly benefits for retired workers now on the social security rolls who began to draw benefits at age 65 or later range from $55, based on average monthly earnings of $74 or less, to $179.70, based on average monthly earnings of $510. When both steps of the benefit increases provided by my bill are effective, the minimum benefit would be $120, and the benefit amount based on average monthly earnings of $510 would be increased to $258.90. The benefit amount payable to workers with average monthly earnings of $650, the highest possible under present law, would be increased from $218 to $314. For a survivor family consisting of a widow and two or more children getting benefits on the basis of $650 of average monthly earnings, total monthly benefits of $511.60 would be payable where $434.40 is now payable.

A retired worker now getting the average benefit of $100 a month would get $144 a month, and the average benefit for an elderly couple would be increased from $168 a month to about $242 a month. Thus the increases in benefits provided by my amendment would represent really significant steps forward in our efforts to alleviate the problem of poverty among our elderly retirees.

The two-step benefit increase would also apply to the special age-72 payments, from the present $40 a month to $48 in January 1970, to $57.60 in January 1972.

In addition to increasing regular monthly benefits and the special age-72 payments, we also need to increase the lump-sum death payment. This bill would nearly double the maximum lump-sum death by increasing it to $500, effective in January 1970. This increase is long overdue. The $255 ceiling on the maximum lump-sum death payment has been in effect since 1952.

Benefits under present law will eventually be based on average monthly earnings in covered work over the person's entire working lifetime, omitting only 5 years of low earnings. Since a person's earnings generally rise over his lifetime, earnings averaged over many years will be only remotely related to the level of earnings just before retirement.

This bill reduces, in two steps, the number of years used in computing benefits. First, beginning in December 1970, the number of years counted under present law would be reduced by one-third, but not to less than 10 years. Second, effective in December 1972, the bill would provide for basing benefits on an individual's highest 10 years of earnings out of any 15 consecutive years after 1950. Coupled with this provision is a regularity-of-service factor, which takes into account the length of time the person worked under the program. This insures that a person who worked in covered jobs over his full working lifetime would get a higher benefit than a short-term worker. These changes would realistically relate benefits to the standard of living which the worker achieved just prior to his retirement.

Widows' benefits would also be increased under my bill. Under present law, the amount of a widow's benefit, payable at age 62 or later, is 82½ percent of the benefit that her husband would have gotten if he started getting benefits at age 65 or later. The bill provides widows' and dependent widowers' benefits equal to 100 percent of the worker's benefit where the survivor's benefits begin at age 65, with reduction down to 82½ percent at age 62, effective January 1970.

A special problem of low benefits for early retirees is developing, due to a high percentage of early retirements, and this bill would provide meaningful retirement income for these people. This im-

provement, to become effective January 1970, would provide that the benefit for workers who come on the rolls at age 62 would be 14 percent less than what they would have gotten at age 65 rather than 20 percent less. The benefit for a wife who comes on the rolls at age 62 would be 17½ percent, rather than 25 percent, less than what she would have gotten at age 65.

RETIREMENT TEST

Increases in wages and prices have occurred since the last change was made in the retirement test. I believe the amount of earnings a person can have in a year and still get full social security benefits should be updated. This bill would increase this amount from the presently allowed $1,680 to $1,800, effective January 1970. The bill provides a corresponding increase, from $140 to $150, in the monthly exempt amount—the amount a person can earn in a month and still get benefits regardless of his earnings for the year.

I am also proposing that the test be changed to assure that a person will not suffer a reduction in disposable income as a result of his working. There would be no change in the $1-for-$2 withholding for the first $1,200 of earnings above the annual exempt amount, but above that only $3 in benefits would be withheld for each $4 of earnings. There would be no point at which $1 in benefits would be withheld for each $1 of earnings.

The bill would provide for automatic adjustment of annual exempt amount of earnings under the retirement test to increases in earning levels, effective beginning in January 1973. This provision would insure that beneficiaries dependent on earnings from work would be able to maintain their economic level to a significant degree.

DISABILITY PROVISION

Mr. Speaker, social security disability benefits are now payable only if the disability is expected to last at least 12 months and only after the worker has been totally disabled throughout 7 consecutive calendar months. Throughout this period, of course, the regular expenses of the family and the extraordinary medical and related expenses must be met, even though the worker's earnings have stopped. I believe that it is unreasonable to delay much-needed benefits until after 7 full months of disability. This bill would make disability benefits payable after the fourth month of disability by substituting a 3-month waiting period for the present 6-month period, effective July 1970. It would also eliminate the requirement that the disability must be expected to last for 12 months or end in death.

Another improvement the bill would make in the disability provisions is also urgently needed. To be considered disabled under present social security law, a worker must be unable to engage in any type of substantial gainful work. Many older handicapped workers do not qualify for disability benefits even though they are unable to do any of the types of work they performed before their handicap.

Effective in July 1970, the bill would fill the gap in the disability protection for older workers, by providing monthly disability benefits to handicapped workers age 55 and over, who can no longer do their regular work or any other work they have done in recent years. The 3-month, rather than 6-month, waiting period would also apply to these older handicapped workers.

The 1967 social security amendments provided benefits for the first time to totally disabled widows and widowers. But the benefits are not payable until the disabled widow or widower has reached age 50, and they are substantially reduced depending on the age at which the benefits begin.

The need of totally disabled widows below age 50 for benefit protection is at least as great as that of the disabled widow between age 50 and 62. This bill would eliminate the age 50 limitation effective January 1970.

Additionally, under present law, a disabled widow whose benefits start at age 50 gets only 50 percent of her deceased husband's benefit. The widow who has suffered the dual tragedy of the death of her lifelong partner and helpmate and of a severe impairment that destroys her working ability has a need for an adequate benefit.

Under this bill the benefit for a disabled widow or disabled dependent widowner would be payable at the rate of 82½ percent of the deceased spouse's benefit amount.

COST-OF-LIVING INCREASE

In addition to the improvements designed to bring the social security program up to date, we should write into the law a provision for keeping benefits automatically up to date with increases in the cost of living. This bill provides for automatic adjustment of benefit amounts annually to cost-of-living increases of at least 3 percent, beginning in January 1973. This would include both regular social security benefits and the special age 72 payments.

A provision in the law for automatically keeping the regular social security benefits and special age-72 payments in line with the cost of living would contribute greatly to the sense of security of the beneficiaries and the workers who are earning protection for themselves and their families.

INCREASE AND ADJUSTMENT OF WAGE BASE

Another automatic adjustment provision needed in the social security program involves the amount of annual earnings that is counted toward benefits and is subject to contributions. This bill would increase the contribution and benefit base from $7,800 to $15,000 in two steps: to $9,000 in 1970; and, to $15,000 in 1972. Beginning in January 1974, the base would be automatically adjusted to increases in wage levels.

MEDICARE

I turn now, Mr. Speaker, to improvements in the medicare program. It is clear that medicare has brought about a very great improvement in the welfare of older Americans. But soaring medical care costs continue to burden Americans of every age and they especially hit hard those who are retired and dependent upon income from social security. It is time now to expand the program to enhance its protection and promise.

The basic concept of social security is that a worker makes contributions during his working years to pay for benefits during his retired years. This bill gives high priority to the idea of financing the medical insurance part of medicare through contributions paid during the beneficiary's working years, just as hospital insurance and cash benefits are financed.

Under the plan provided in this bill, to become effective in July 1970, both the hospital insurance and the medical insurance parts of the program are financed with contributions paid by employees, employers, and the self-employed and with a matching contribution by the Federal Government from general revenues. By combining the two parts of the medicare program, the existing enrollment and coverage provision for the supplementary medical insurance program would be eliminated. Everyone, then, who qualified for hospital insurance would also qualify for supplementary medical insurance. However, the benefit provisions and the different methods of reimbursement under the two parts of the medicare program would remain unchanged.

Another improvement in medicare incorporated in this bill is the extension of health insurance protection to the disabled. The disabled person, like the retired person, incurs high health costs concurrent with decreased income. Hospital and medical costs per person for the disabled are two to three times higher than for the aged. In addition, the proportion of severely disabled people with any form of health insurance is lower than the proportion of the aged who had health insurance protection before medicare was enacted.

Therefore, this bill includes a provision that hospital insurance and supplementary medical insurance protection be extended, effective January 1972, to social security disability beneficiaries. This protection would be financed in the same manner proposed for health insurance for the aged: Payroll contributions by employees, employers, and the self-employed, along with a Federal matching contribution from general revenues.

The bill would also provide coverage of prescription drugs under medicare. Drug costs account for about 30 percent of private expenditures for health care by the aged person's health care dollar. Yet very few health insurance plans offer protection against the cost of drugs.

A provision contained herein extends medicare coverage, beginning January 1972, to legend drugs—drugs which are available only by a physician's prescription—plus some non-legend drugs, such as insulin, which are of a life sustaining nature or whose use is essential to main-

tenance of the beneficiary's health, and Secretary of Health, Education, and Welfare, with the advice of an expert committee established by this bill, would prescribe and annually review a list of legend drugs and certain non-legend drugs for which reimbursement could be made under the program. A $1 deductible for a prescription and refill would be required and payment would be based on the "reasonable drug charge," consisting of an acquisition allowance plus a dispensing allowance.

Mr. Speaker, I am concerned about unnecessary costs of drugs purchased by brand name, when much cheaper generic drugs of equal quality are available. At this time, the prescription drug provisions of my bill do not provide for reimbursement based on actual cost to the ultimate dispensers of the least expensive, available drug product of proper quality. However, it is my intention to have this complex subject explored thoroughly when the bill is considered by the House Ways and Means Committee. And I may devise an approach that will utilize savings from the use of low-cost generic equivalents.

FINANCING

The cost of the improvements this bill would make in the social security program would be met out of the $15,000 contribution and benefit base and automatic adjustment of the base; the current favorable actuarial surplus of 1.16 percent of taxable payroll; rounding out the contribution rate from 5.9 percent each to 6 percent each; and a gradually increasing Government contribution eventually equal to approximately one-third the total cost of the cash benefits program.

On the basis of 1969 wage assumptions now being used by the Social Security Administration in making cost estimates, this bill would not be in actuarial balance. If 1970 wage levels were used in making the actuarial assumptions, this bill would be in actuarial balance. For this reason, I am contemplating using a 1970 wage level assumption.

Certainly wage levels in 1970 will be higher than in 1969. Moreover, the last 20-percent benefit increase contained in my bill would not become effective until 1972. There is no doubt that wages will continue to rise as they have throughout the history of our country and by the time this benefit increase goes into effect, the program would be financed on an actuarially sound basis.

Mr. Speaker, social security has long been accepted as an important part of American life. About 92 million people will have earnings from work covered by social security this year and are building protection for themselves and their families. Currently, 25 million Americans are receiving benefits totalling over $2 billion each month.

Try to imagine America without social security. Mr. Speaker, only about 5 percent of our retirees would have continuing incomes above the amount needed to maintain what the Department of Labor has defined as a "moderate" living standard—$4,200 a year for an aged couple with social security. Ten million people are kept above the poverty line by their social security benefits. Another 3 million would exist only a notch above the poverty level were it not for social security.

We have not used the social security program to its full potential. It can do much more toward providing economic security and preventing poverty. The bill I am introducing today would go a long way toward maximizing the potential benefits of social security for the benefit of more people and for the benefit of the Nation as a whole. I look forward to its early consideration and adoption.

I include the following tables at this point:

MONTHLY CASH SOCIAL SECURITY BENEFITS UNDER PRESENT LAW AND UNDER THE GILBERT BILL FOR A RETIRED COUPLE (MAN AND WIFE) AT AGE 65

Average monthly earnings [1]	Benefit amounts: Present law	Gilbert bill: Effective January 1970	Gilbert bill: Effective January 1972
Minimum benefit	$82.50	$135.00	$180.00
$150	132.60	159.20	191.10
$250	172.50	207.00	248.40
$350	210.60	252.80	303.30
$450	247.50	297.00	356.40
$550	284.90	341.90	410.30
$650	323.00	392.40	471.00
$750		438.00	525.60
$850			583.50
$950			639.00
$1,000			666.00
$1,150			750.00
$1,250			805.50

[1] Although the highest average monthly earnings possible under the present $7,800 base is $650, retirement benefits based on this amount will generally not be payable for many years to come. For example, the highest average monthly earnings possible under the law for a man reaching age 65 and retiring in 1970 will be $446.

The bill provides for a 2-step increase in the base to $9,000 in 1970 and $15,000 in 1972, and also liberalizes the method of figuring average monthly earnings. These 2 changes will make higher average monthly earnings—and thus higher benefits—possible much sooner than under present law. For example, under the bill a man reaching age 65 and retiring in 1974 could have average monthly earnings of as much as $720, whereas under present law they could be no higher than $491. Benefits based on average monthly earnings higher than $720 will become payable gradually over the years after 1974.

MONTHLY CASH SOCIAL SECURITY BENEFITS UNDER PRESENT LAW AND UNDER THE GILBERT BILL FOR A WIDOW AT AGE 62

Average monthly earnings [1]	Benefit amounts: Present law	Gilbert bill: Effective January 1970	Gilbert bill: Effective January 1972
Minimum benefit	$55.00	$90.00	$120.00
$150	73.00	90.00	120.00
$250	94.90	113.90	136.70
$350	115.90	139.10	166.90
$450	136.20	163.40	196.10
$550	156.70	188.10	225.70
$650	179.90	215.90	259.10
$750		240.90	289.10
$850			321.00
$950			351.50
$1,000			366.30
$1,150			412.50
$1,250			443.10

[1] Although the highest average monthly earnings possible under the present $7,800 base is $650, aged widow's benefits based on this amount will generally not be payable for many years to come. For example, the highest average monthly earnings possible under the law for a man age 45 or older who dies in 1970 will be $446.

The bill provides for a 2-step increase in the base to $9,000 in 1970 and $15,000 in 1972, and also liberalizes the method of figuring average monthly earnings. These 2 changes will make higher average monthly earnings—and thus higher benefits—possible much sooner than under present law. For example, under the bill a man age 45 or older who dies in 1974 could have average monthly earnings of as much as $720, whereas under present law they could be no higher than $491. Benefits based on average monthly earnings higher than $720 will become payable gradually over the years after 1974.

MONTHLY CASH SOCIAL SECURITY BENEFITS UNDER PRESENT LAW AND UNDER THE GILBERT BILL FOR A RETIRED WORKER OR WIDOW AT AGE 65

Average Monthly earnings [1]	Benefit amounts: Present law	Gilbert bill: Effective January 1970	Gilbert bill: Effective January 1972
Minimum benefit	$55.00	$90.00	$120.00
$150	88.40	106.10	127.40
$250	115.00	138.00	165.60
$350	140.40	168.50	202.20
$450	165.00	198.00	237.60
$550	189.90	227.90	273.50
$650	218.00	261.60	314.00
$750		292.00	350.40
$850			389.00
$950			426.00
$1,000			444.00
$1,150			500.00
$1,250			537.00

[1] Although the highest average monthly earnings possible under the present $7,800 base is $650, retirement benefits based on this amount will generally not be payable for many years to come. For example, the highest average monthly earnings possible under the law for a man reaching age 65 and retiring in 1970 will be $446.

The bill provides for a 2-step increase in the base to $9,000 in 1970 and $15,000 in 1972, and also liberalizes the method of figuring average monthly earnings. These 2 changes will make higher average monthly earnings—and thus higher benefits—possible much sooner than under present law. For example, under the bill a man reaching age 65 and retiring in 1974 could have average monthly earnings of as much as $720, whereas under present law they could be no higher than $491. Benefits based on average monthly earnings higher than $720 will become payable gradually over the years after 1974.

ANALYSIS OF SOCIAL SECURITY (OASDHI) BILL INTRODUCED BY REPRESENTATIVE JACOB H. GILBERT

Item	Existing law	Bill
1. Benefit amounts: (a) Basic amounts	Benefits for a worker beginning at age 65, or when disabled before age 65, range from $55 to $218. Benefits for dependents and survivors are based on these amounts.	Benefit amounts for the worker would be increased in 2 steps: Beginning and range: January 1970; $90 to $293. January 1972, $120 to $537. Benefits for dependents and survivors would be increased proportionately.
(b) Automatic adjustment	No provision	Benefits amount would be automatically adjusted annually for at least a 3-percent increase in the cost of living.
(c) Actuarial reduction	Benefits for workers, and their wives or husbands, who start getting benefits before age 65 are payable at reduced rates. The benefits are reduced to an amount that will on the average give the same total lifetime benefits that would have been paid if the benefits had not begun until age 65. A worker's benefit at age 62 is 80 percent of the benefit he would have gotten at age 65; a wife's or dependent husband's benefit is 75 percent of the amount payable at age 65.	Smaller reductions would be made. A worker's benefit at age 62 would be 85 percent of the unreduced amount; a wife's or husband's, 82½ percent.

ANALYSIS OF SOCIAL SECURITY (OASDHI) BILL INTRODUCED BY REPRESENTATIVE JACOB H. GILBERT—Continued

Item	Existing law	Bill
2. Benefit computations	All social security benefit amounts are based on the insured worker's average monthly earnings. Nearly all benefits are now based on average monthly earnings after 1950—figured over 5 less than the number of years after 1950 and up to the year the worker reaches age 65 (62 for women), becomes disabled, or dies.	The number of years used in figuring the worker's average monthly earnings would be reduced by ½ beginning in December 1970, and to his best 10 years out of any 15 consecutive years beginning in December 1972. The average monthly earnings figured over the shortened periods would be adjusted to take account of the length of time the person worked under social security. The ending point of the period that is used to determine insured status for a man and the number of years over which a man's average monthly earnings are calculated, will be the beginning of the year in which he reaches age 62 instead of age 65. The ending point for men will be the same as it is for women under present law.
3. Earnings test	No benefits are withheld on annual earnings of $1,680 or less. For earnings up to $1,200 above $1,680 (i.e. $2,880), $1 is withheld for each $2 of earnings, and for additional earnings $1 is withheld for each $1 of earnings, except that no benefits are withheld any month in which a person does not earn more than $140 in wages nor render substantial services in self-employment.	No benefits will be withheld on earnings of $1,800 or less. For earnings up to $1,200 above $1,800 (i.e. $3,000), $1 would be withheld for each $2 of earnings, and for additional earnings $3 would be withheld for each $4 of earnings, except that no benefits would be withheld for any month in which a person does not earn more than $150 in wages nor render substantial services in self-employment.
	No provision for automatic increases	Beginning in 1973, the $1,800 and $150 amounts specified above would be automatically increased as average earnings levels rise.
4. Parent's benefits	Benefits for aged dependent parents of deceased workers only are equal to 82½ percent of the worker's primary insurance amount (or 75 percent of that amount if more than one parent is entitled to benefits).	Benefits would be provided for aged dependent parents of retired and disabled workers. The benefit amounts for the parent of a living worker would be equal to 50 percent of the worker's primary insurance amount; actuarially reduced if taken at age 62–65. The benefit amount for parents of deceased workers would continue to be 82½ percent.
5. Noncontributory wage credits for military service	Noncontributory wage credits of $100 are provided for each month of military service after 1967.	Would extend noncontributory wage credits of $100 a month retroactively to 1957.
6. Disability provisions:		
(a) Definition of disability	Benefits cannot be paid until after a 6-month waiting period, and are payable only if the disability is expected to last for at least 12 months or to result in death.	The waiting period would be reduced from 6 to 3 months, and the requirement that the disability must be expected to last 12 months or to result in death would be eliminated.
(b) Alternative definition for older workers	Workers must be unable to engage in any substantial gainful activity by reason of a medically determinable physical or mental impairment.	Workers aged 55–64 could qualify if unable to engage in substantial gainful activity (by reason of a medically determinable physical or mental impairment), in their regular work or in any other work in which they have engaged with some regularity in the recent past.
(c) Childhood disability benefits	Benefits are payable (if the insured parent dies, becomes disabled, or retires) to an adult son or daughter who becomes totally disabled before he reaches age 18.	Benefits would be payable if such adult son or daughter becomes totally disabled before he reaches age 22.
7. Medicare:		
(a) Financing both hospital insurance and supplementary medical insurance on the basis of payroll contributions and general revenues.	Hospital insurance is financed by contributions from employers, employees, and the self-employed. Supplementary medical insurance is financed by monthly premiums paid by enrollees and matched by the Federal Government. Moneys are deposited in, and benefits and administrative expenses are paid from, 2 separate trust funds. Eligibility for hospital insurance is based on eligibility for cash benefits (except for a special transitional provision) while medical insurance is available to virtually all those over 65.	Would eliminate supplementary medical insurance premiums and provide for financing both hospital and medical insurance programs through contributions of employers, employees, and the self-employed, and a matching contribution by the Federal Government. All moneys would go into a combined trust fund, which would pay the benefits and administrative expenses of both programs. Eligibility requirements for both hospital and medical insurance would be identical to that required under existing law for hospital insurance.
7. (b) Medicare for the disabled	Medicare is available only to people age 65 and over (without regard to disability).	Would extend medicare, under the combined financing approach described above, to people under age 65 entitled to monthly cash disability benefits. Benefits would begin with the 1st month for which the individual is eligible for cash benefits and end 12 months after cash benefits cease.
Coverage of drugs	Generally, drugs are covered only if they are provided in a hospital or an extended care facility. Drugs are covered on an outpatient basis only if the drug is one which cannot be self-administered.	Would extend coverage of out-of-hospital prescription drugs under hospital insurance program. Drugs covered would be selected by the Secretary with the advice of an expert committee provided for by the bill. Reimbursement would be made to providers of drugs (pharmacies, etc.) on the basis of aquisition and dispensing allowances. The beneficiary would be required to make a $1 copayment per prescription or per refill.
8. Contribution and benefit base	The amount of annual earnings on which social security contributions are payable and that can be counted toward benefits is $7,800. No provision for automatic increases.	The amount of annual earnings to be counted for contribution and benefit purposes would be increased as follows: To $9,000 for 1970 and 1971; To $15,000 for 1972; and for years after 1972, the annual earnings amount would be automatically increased (in even-numbered years) as average earnings levels rise.
9. Contribution rate schedule	Employer-employee, each (percent)	Employer-employee, each (percent)

Year	OASDI	HI	Total
1970	4.20	0.60	4.80
1971–72	4.60	.60	5.20
1973–75	5.00	.65	5.65
1976–79	5.00	.70	5.70
1980–86	5.00	.80	5.80
1987 and after	5.00	.90	5.90

Year	OASDI	HI	Total
1970	4.20	0.60	4.80
1971–72	4.80	.65	5.45
1973 and after	5.10	.90	6.00

Self-employed (percent)

Year	OASDI	HI	Total
1970	6.30	0.60	6.90
1971–72	6.90	.60	7.50
1973–75	7.00	.65	7.65
1976–79	7.00	.70	7.70
1980–86	7.00	.80	7.80
1987 and after	7.00	.90	7.90

Self-employed (percent)

Year	OASDI	HI	Total
1970	6.30	0.60	6.90
1971–72	6.90	.65	7.55
1973 and after	7.10	.90	8.00

10. Federal contributions	No provision	General revenue contributions gradually increasing over a 10-year period to an amount equal to approximately ⅓ the total cost of the program.

MORATORIUM POST MORTEM

(Mr. WYMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WYMAN. Mr. Speaker, one of the puzzling aspects of last week's so-called moratorium on Vietnam is exactly what those who demonstrated were trying to prove? If it was that they do not like the war—none of us do. If it was that they want it ended—all of us do, but the enemy does not. If it was that we are not getting out of Vietnam fast enough—even if every American fighting man was ordered to leave tomorrow it could not be done without slaughter on the roads, slaughter on the beaches, and slaughter from the air as American troops assembled on the docks to depart. One would think that those disenchanted with Vietnam policies would realize no American President of either political party can afford to set the stage for an American Dunkirk. They must be aware of the fact that it is a basic obligation of the American Government to protect the lives of Americans forced to remain in Vietnam in ever dwindling numbers as U.S. withdrawal continues.

Not a little of the frustration over Vietnam results from the fact that the war there has never been fought to win under any American political administration. The American military has never been allowed to destroy aerially the truly significant enemy targets. Even the offloading of known war supplies at Haiphong has never even been interrupted although it has been established fact for years that these supplies included guns and bullets and oil and material of war that was transported to kill American boys. Of course, if you are not going to fight a war to win you cannot win it. And no American citizen ought to be ordered to fight abroad under such insane policies. Of course, there is frustration and confusion from such things.

But the point is that today President Nixon is acting to get us out of Vietnam. He is withdrawing. He is not continuing to increase American forces there. His policy is a radically changed one from that which prevailed under Lyndon Johnson. Yet, the President cannot accelerate the withdrawal to a level that would pull the rug out from under the hundreds of thousands of Americans who are stuck there. He seeks a commitment from the enemy forces to cease their attacks so we can withdraw. One would think that even those marching in the moratorium demonstration would realize such policies deserve their support and not their protest. Actually the demonstration should be against the Communist embassies and not our own Government, for it is the Communists who steadfastly refuse to make any commitment that would end this war. It is the Communists who tell American wives who plead for their husbands' release to go home and demonstrate against their Government. It is the Communists who clearly are determined that the Americans shall be driven into the sea and eventually destroyed so that communism can prevail in the world. The demonstrators should realize this, too. There is no quarter in this struggle which is worldwide and on the outcome of which depends the ability of this same younger generation to continue to live in freedom in an open society such as ours.

There are no free Senators and Congressmen in the Soviet Union, just as there is no right of free speech or private ownership and inheritance of property, nor almost any of the precious bill of rights that we have in America. Do the protesters really want a world or life under such conditions? Would they honestly rather be "Red than dead?" I cannot believe they do. If they actually do, then the good Lord help our way of life should they ever become a majority in this country.

PROBLEM OF HORSE SORING

The SPEAKER pro tempore. Under a previous order of the House the gentleman from Tennessee (Mr. KUYKENDALL) is recognized for 30 minutes.

(Mr. KUYKENDALL asked and was given permission to revise and extend his remarks.)

Mr. KUYKENDALL. Mr. Speaker, I appreciate the courtesy of a special order set today to allow me to express myself on the problem of horse soring.

Since the time that this practice became a nationally known scandal, Mr. Speaker, I have not yet heard one voice rise up in its defense. There have been some mutterings and mumblings on the edge of the picture, something to the effect that it is a State problem and none of the Federal Government's business, but not that first word has been spoken in defense of the trainers, the owners, and judges who have winked at the practice each time they watched a magnificent animal walk by, with its ears back in pain.

If there is someone here who does not know what we are talking about, let me explain it:

The Tennessee walking horse is almost unique in its gait, which is a high-stepping, easy-to-ride movement, most easily described as "poetry in motion." Watch it done by a champion, trained by people who know what they are doing, and you can almost hear Strauss waltzes.

And over the years, the prizes for the best Tennessee walking horses have gone consistently to the horses who stepped the highest and fanciest.

There are more ways than one to make a horse step high. One way is by careful training, which requires long hours of work and patience. Another way is to hurt the horse—to give him a pain in his foot, which makes him raise his foot higher off the ground to avoid the pain.

The ways of doing this bespeak an ingenuity that rivals Torquemada in the days of the Spanish Inquisition. Certain ointments—caustic enough to burn through the skin, are applied to the coronet—which corresponds to the instep on your foot, Mr. Speaker—and then heavy chains, or other weights, are placed on top of the sore area.

Think for a moment, of the last blister you had. Now think again, and visualize a chain bracelet around your ankle bumping the blister every time you take a step.

That, Mr. Speaker, is soring. That is what some otherwise decent religious men, who are good to their families, generous to charities, and zealous in their religion, do to dumb animals in the name of gentlemanly sport. It is an abomination that must be stopped.

I am happy to say to you that many of the owners and breeders of fine horses in my State do not condone this practice, and want to see it stopped every bit as much as I do. But their efforts so far have been unsuccessful, and it is time they had help.

When I first introduced H.R. 14052, there came a faint cry of protest from Tennessee—to the effect that this was strictly a State matter, and one in which the Federal Government had no part. I replied that the States so far have done nothing to curb it, and I heard no voices assuring me they intended to.

Then I received a call from the Governor of our State, and he was such a voice. He minced no words in suggesting what should be done; the appointment of a special Governor's commission to license participants and oversee the welfare of show animals; the establishment of heavy penalties for repeating violators.

In turn, I assured Governor Ellington that the minute he signed such a bill into law, I would return to the floor of the House and ask my colleagues to amend our bill to exempt from its provisions any State with adequate laws on their statute books to control the practice.

Last week, it was my pleasure to meet with a delegation from Tennessee who journeyed to Washington for the specific purpose of discussing this matter with me—the State veterinarian of Tennessee; the president of the Tennessee Walking Horse National Celebration at Shelbyville; and the assistant attorney general of Tennessee who wrote the proposed State law. We determined that our goals were the same, and we differed only in a few details of how to pursue them.

Following this conference, I presented to Governor Ellington my suggestions for the makeup of the Tennessee Horse Protection Commission. He readily agreed to my suggestions, and authorized me to tell you what he intends to recommend as a watchdog agency to protect the Tennessee walking horse:

The Tennessee Commissioner of Agriculture, serving as ex officio chairman.

Three members who are either owners, trainers, or riders of horses shown in professional show classes.

One practicing veterinarian, who is not connected with professional horse shows, or retained by individuals or clubs who exhibit horses in these shows.

One member representing the National Celebration, who shall not be an owner, trainer, or rider.

One member who is associated with an organization primarily involved in the humane treatment of animals.

This seven-member commission would be empowered to prescribe rules and standards for the licensing of trainers, riders, judges, and stewards before they can be allowed to conduct, or participate in any horse show in the State.

The act would prohibit unlicensed persons from participation in any professional show, and would further prohibit the practice of soring, exhibition of a sored horse, allowing a sored horse or unlicensed person to participate in a show, or offering a sored horse for sale.

In addition to the power to revoke licenses, the act also arms the commission with a specific misdemeanor statute: violators of its provisions would be subject to maximum fines of $500 and 6-month jail terms for a first offense; and $1,000 and 11 months and 29 days in jail for subsequent convictions.

This, Mr. Speaker, is action long overdue at the local level. I commend the leadership of my State for taking it, however belatedly, and I renew my pledge that the day it is signed into law, I will ask that our bill be amended to exempt from its provisions any State that has put its own house in order.

And to those citizens who ask me how I, as a Member of the U.S. Congress, can find time to be concerned over animals amid the pressing problems of war, disease and human suffering that face us, I can only ask them to consider:

Would you want to be represented by one who cannot?

WHY THE BOARD OF REVIEW MUST BE ABOLISHED

The SPEAKER pro tempore (Mr. PRICE of Illinois). Under previous order of the House, the gentleman from West Virginia (Mr. HECHLER) is recognized for 60 minutes.

Mr. HECHLER of West Virginia. Mr. Speaker, on page 29368 of the October 9, 1969, RECORD, I set forth the reasons why the present Federal Coal Mine Safety Review Board should be abolished, and also how outrageous it would be to expand the powers of the Board of Review in the pending coal mine health and safety bill. There is ample provision for judicial review in the legislation we will consider, and it violates every canon of sound administrative procedure to empower five private individuals to come in and review the decisions of the public official responsible.

Copies of the pending bill have been reviewed by a number of experts in administrative law, and their responses are very revealing:

LAW SCHOOL OF HARVARD UNIVERSITY,
Cambridge, Mass., October 16, 1969.

Re Federal Coal Mine Health and Safety Act.

Hon. KEN HECHLER,
House of Representatives,
Washington, D.C.

DEAR MR. HECHLER: I have looked over the proposed federal Coal Mine Health and Safety Act of 1969 with a view to the question raised in your letter of October 7.

I know very little about the mining industry although I have some familiarity with the history of the United Mine Workers and collective bargaining in the industry. On general principle, it seems to me that the proposed administrative structure is thoroughly unsound. The determinations of a senior public official ought not to be subject to review by a board constituted so as to represent special interest groups. The Secretary of the Interior is charged with considering the multitude of diverse interests involved in the light of legislative policies. He acts with at least a measure of detachment from special interest groups. Four members of the Board will almost certainly be designees of particular groups, including operators' associations and the United Mine Workers of America. While the repersentatives of the special interest groups may seek to achieve detachment, it is inevitable that they will be subject to all kinds of pressures such as loyalty, past and present affiliation, duties of representation, etc. The concurrent votes of the special interest representatives, speaking perforce for their constituencies, should not be enough to overturn the considered determination of an independent public official in a matter so important as health and safety. The special interest representatives are all too likely to have special interests that may sometimes lead them into accommodations that are not in the interest of the health and safety of miners.

The incongruity of the proposed arrangement is underscored by the fact that, with the bill in its present form, an order of the Secretary which the neutral public member of the board thinks to be proper can nevertheless be overturned by the representatives of special interests. It seems most extraordinary to give special interests the power to veto the uniform determination of all the impartial public officials who study an issue.

I have never encountered any similar administrative arrangement. Perhaps one exists; but if it does, neither I nor the colleagues whom I have consulted have encountered it.

The proper place for interest representation is prior to the order of the Secretary of the Interior. Such representation insures that the views of people intimately connected with the industry will be taken into account but the ultimate decision would be made upon consideration of all the interests concerned without disproportionate weight being given to represented groups.

Sincerely,

ARCHIBALD COX.

UNIVERSITY OF MINNESOTA,
Minneapolis, Minn., October 16, 1969.

Congressman KEN HECHLER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN HECHLER: This will reply to your letter of October 7. Unfortunately, I have not had the time to give your letter the careful consideration it deserves. Universities these days do not seem to allow time for quiet thought.

I do not know of any other review board similar to the proposed Federal Coal Mine Health and Safety Board. However, I have not been able to make a careful check to warrant a certain statement to that effect.

An evaluation of the proposed Board would require intimate knowledge, which I do not have, about how the existing Federal Coal Mine Safety Board has been working.

Nevertheless I will state my views for whatever they may be worth. I am generally opposed to the creation of such administrative boards of review, and especially if only one side to a controversy is given access to them. My reason for opposition is that effective administration of any federal statute depends upon combining authority and responsibility. Under the proposed bill, the secretaries of the Interior and of HEW, and ultimately the President, will be held responsible for the health and safety standards promulgated. They should therefore, be given all the authority necessary to discharge this responsibility. They should not be held responsible, for example, for health and safety standards that the proposed review board may impose. At the same time, the proposed review board, which seems to be given ultimate administrative authority, is not the kind of agency that can be held publicly responsible for its actions. I agree with you that the interests of the mine operator are adequately protected by the judicial review provisions of the bill. I am sorry that I can only give you these general impressions and not conclusions based upon a study of the work of the existing review board.

Good luck.

Sincerely yours,

CARL A. AUERBACH,
Professor of Law.

THE UNIVERSITY OF TEXAS,
SCHOOL OF LAW,
Austin, Tex., October 13, 1969.

Hon. KEN HECHLER,
Cannon Office Building,
Washington, D.C.

DEAR CONGRESSMAN HECHLER: This is in reply to your request for comments on H.R. 13950 relating to the health and safety of coal miners.

Section 105 of the Bill authorizes operators of coal mines *and representatives of miners* to apply to the Secretary of the Interior for a review of an order issued by him under Section 104. Section 107(a) gives to operators the option either to apply to the Health and Safety Board of Review for revision of an order of the Secretary issued under § 104 or under § 105. In other words, an operator need not ask the Secretary for a review of his order under § 105, but may directly appeal to the Review Board from an initial order of the Secretary. *No similar right is granted to representatives of miners.*

It is true that § 107(b) requires that a copy of the operator's application to the Board must be sent to representatives of the miners and that the Board shall permit intervention by "any interested person." This would, undoubtedly, include miners affected by the challenged order of the Secretary. But this intervention does not give to representatives of the miners the right to initiate proceedings before the Board, and this is all the more startling because, as stated above, the miners may ask the Secretary for a review of his order.

The provisions of Judicial Review of the Board's decisions (§ 108) are even more one-sided. Only the Secretary and "the operator aggrieved by the decision" may file a petition for judicial review. The miners are not mentioned, and under familiar principles of statutory interpretation would not be entitled to judicial review.

Now it is possible that in some cases the miners would not be aggrieved. This would most likely be the case with respect to an order under Section 104(a) in which the Secretary finds imminent danger and orders all personnel removed from the mine. A decision of the Board upholding such an order would be in the interest of the miners, who would have no reason and no standing to ask for judicial review. On the other hand, orders of the Secretary issued under Section 104 (b), (c), (h) or (i), which require certain corrective measures in the absence of a finding of imminent danger may aggrieve the miners: They may contend that there is imminent danger which calls for an order pursuant to paragraph (a) of Section 104. There may be other reasons for protest by the miners against such orders.

Perhaps the authors of the Bill had in mind an analogy to the unfair labor practice provisions of the National Labor Relations Act, where a union complaining of unfair labor practices allegedly committed by an employer is not formally a party to the proceeding. If that was the reason for denying to the miners the right to initiate proceedings before the Board and to ask for judicial review, it is entirely unconvincing: The issues under this Bill are infinitely more serious than the question of whether an unfair labor practice has been committed. Hence, unless there is some other justification for this which escapes me, the denial of the right of review to the persons vitally affected appears to be arbitrary and unreasonably discriminatory.

This discriminatory method is also reflected in the "temporary relief" provisions of the Bill. Such relief may be granted by the Secretary (Section 105d), the Board (Section 107f), and the Court (Section 108c). The Board may grant temporary relief only *at the request of an "applicant", that is an operator,* and the Court may grant it to the parties, which means the Secretary and the operator, *but not the miners.* The Board could thus suspend an order under Section 104(a), and the Court, at the request of the Secretary, could later reinstate it, but that correction may come too late.

Moreover, even if the review provisions were to be made available to both sides on

equal terms, there would still remain a serious question as to the effectiveness of this procedure. The definition of "imminent danger" (Section 3j) is the heart of this legislation. Suppose the Secretary issues an order under Section 104(a), and the operator, in good faith, but, as it turns out later, mistakenly, protests; He may ask the Secretary to reconsider, and the Secretary is required to make his decision "as promptly as practicable." (Section 105c). If the Secretary turns down the protest, the operator may go to the Board which also must decide the case "as promptly as practicable." (Section 107g). This hortatory phrase is incapable of precise definition and may cover a relatively substantial period of time. If the operator is turned down by the Board, he may appeal to the Court which is not bound by any time limit. In short, this elaborate review procedure satisfies the most meticulous requirement of due process. But the miners may not survive it, unless an order finding "imminent danger" were to remain in effect until a final decision as to its validity.

The operators may feel that this would not protect them against arbitrary findings of "imminent danger." The answer is not the long drawn out procedure presently provided by the Bill, but a special one-step procedure permitting direct review by a Court of the finding of "imminent danger", or "no imminent danger" and requiring a decision within a specified short period of time on a high priority basis ahead of all other cases on the Court's docket. I respectfully suggest that nothing less would suffice where human life is at stake.

Best wishes.

Sincerely yours,

CARL H. FULDA,
Professor of Law.

Re H.R. 13950.
HON. KEN HECHLER,
Cannon Office Building,
Washington, D.C.

DEAR REPRESENTATIVE HECHLER: Any request in the name of President Truman requires the best response I can manage, even though I am not at all confident about my competence.

With respect to the specific questions put in your letter of October 7, 1969, permit me to respond as follows:

(1) the Board of Review contemplated by §§ 106–107 of HR 13950, 91st Congress, is an anomaly and would only serve to hinder the attainment of the goals which the bill is nominally designed to achieve. Where the Congressional purpose is the physical safety or health of our citizens it has long been recognized that elaborate review devices are inconsistent with such a goal and that summary action, with judicial review *following* such action is both constitutionally permissible and, indeed, desirable. See, e.g., *Gellhorn & Byse, Administrative Law* 769–84 (4th ed. 1960). The interposition of a review board between the order of the Secretary and the courts is a crude device and, to this writer, a transparent attempt to encumber and weaken the enforcement of the policies of the bill. In my judgment, in order to insure effective implementation of the policies of this legislation while at the same time affording protection against overzealous enforcement the Board should be totally eliminated and Section 407 cut out so that the action of the Secretary would be reviewable in accordance with the procedures of the Federal Administrative Procedure Act. In this day and age, to seek exemption from the Federal Administrative Procedure Act and to substitute, for the time-tested procedures thereof, a "Review Board" with what must inevitably become a "private sector bias" and with jurisdiction limited solely to operator appeals, is, to my mind, ludicrous;

(2) although it seems to me that during the early stages of the New Deal (E.g., the National Recovery Administration) techniques of this sort were, from time to time employed (how about the Bituminous Coal Commission?) I know of no present federal analogy, except, perhaps the notorious Railroad Adjustment Board whose deadlocks seem to require the intervention of a referee. See *K. C. Davis, Administrative Law: Cases-Text-Problems* 243 (1965 ed.) But even this agency is composed of representatives drawn from both sides, which is not quite the same as the proposed Federal Coal Mine Health and Safety Board of Review. Unfortunately, in our state governments, there is some precedent for this type of body in that many regulatory bodies (E.g., State Banking Commissions) are composed of persons drawn from the very same professions or callings whose activities have been designated as requiring regulation and control. This practice has been the subject of increasing dissatisfaction and criticism, and, for this reason, would not seem to be a desirable model for federal legislation.

Some years ago, while doing some research into the problem of "standing," I came across the case of *Director of USB of M v. Princess Elkhorn Coal Co.*, 226 F. 2d 570 (6th Cir. 1955). The case (which was decided in favor of the operator despite vigorous departmental objection) seems to confirm your appraisal of the loophole shooting process of 1952.

I am taking the liberty of forwarding a copy of this letter and the copy of the bill which you furnished to me to Professor Walter Gellhorn who may wish to make some comments. He is considerably more experienced in this area than I and may have some more valuable observations to make.

Yours faithfully,

FRED DAVIS,
Professor of Law.

LAW SCHOOL OF HARVARD UNIVERSITY,
Cambridge, Mass., October 16, 1969.

HON. KEN HECHLER,
Cannon Office Building,
Washington, D.C.

DEAR CONGRESSMAN HECHLER: I believe that as a general proposition it is bad administrative theory and bad administrative practice to set up over a public officer a board based on interest representation. It is appropriate to require a public officer to consult the interests and to allow them to participate in the process leading up to decision. But except in the most unusual circumstances, it is unsound to give such a board the ultimate power. The reason for this is that the representation of interests can never be complete, can never be truly representative of all of the legitimate interests. Though I do not know enough about the organization of the coal industry to have an informed judgment, I wonder whether there would not be a conflict of interests within the class of mines in which more than fourteen individuals are regularly employed. The very purpose of vesting power in the public officer is to secure a more inclusive, a more balanced evaluation.

The actual intention of the bill with respect to the power of the Board is not clear to me. Is there possibly an ambiguity in Sec. 106(h) to the effect that, "official action can be taken only on the affirmative vote"? In the absence of an affirmative vote does the ruling of the Secretary against the company stand or does the whole proceeding against the mine fail? Strictly, it should be the former since the proceeding is an appeal. If, however, the proceeding is treated as a proceeding de novo, the failure of an affirmative vote would mean that no action against the mine could be taken. Perhaps this is clear to those familiar with the bill. If I can be of any further help please call on me.

Sincerely,

LOUIS L. JAFFE,
Byrne Professor of Administrative Law.

DECISIONS OF THE BOARD

A review of the 22 decisions of the Board makes one wonder whether this Board understands that the purpose of the 1952 act is safety. For this reason, the act should not be construed restrictively. Yet, many of the cases have, in fact, been construed in this manner. One in particular clearly demonstrates this point. It is a case in which the Bureau was reversed in 1961—docket No. 61–02.

In the case, a fatality occurred in the Midvale Mine No. 7 in Ohio, a union mine. Since the Bureau of Mines' advisory code was part of the union contract, the operator, under that code, was required to "freeze" the condition surrounding the accident until a Bureau inspector completed his investigation.

When the inspector came, he took an air sample and found 0.49 percent methane. Under the act, if 0.25 percent methane or more is found, the mine must be classed gassy. The inspector issued a gassy classification order based on the sample. The operator appealed.

The operator contended that by voluntarily complying with the code provisions relating to accident notification and investigation, thereby exposes his entire mine to a gassy classification based on the air sample taken at the very site, and under the program conditions, of that accident, obviously no informed and vulnerable operator would ever comply with the code.

The Board said:

Confronted with the problem of such conflicts in the operation of a statute, the courts have frequently indicated that the act must be read in its entirety and the conflicting provisions must be reconciled and harmonized to accomplish the overriding purposes of the legislature.

I certainly would concur with this statement, but the Board went further, as you will see, and attempted to harmonize an act of Congress with an advisory code that has no basis in law. It was only enforceable under the union contract.

The Board unanimously went on to conclude:

Applying these principles to the instant case, we are of the opinion that, under the particular circumstances here involved, the applicant's mine was improperly classified as gassy under ection 203(d) of the act. More precisely, we hold that where, as here, the operator fully complied with Title I and the Code by promptly notifying the Bureau and freezing the conditions of a fatal accident, section 203(d) was not intended to empower the Bureau to classify the mine as gassy based on an air sample collected at the very site, and under the frozen conditions, of that accident.

This determination in our view reconciles the conflicts apparent in this case and renders Title I, the Code, and Title II workable and in harmony for the effective operation of the entire act. Furthermore, in our considered judgment, this decision more fully

effectuates the overriding and controlling safety purposes sought to be accomplished by Congress in its mine safety program. In the latter connection, the intended safety purposes of Title I as implemented by the Code obviously can be effectuated only by encouraging, rather than penalizing, full compliance with the applicable Code provisions in the present case. Moreover, as already mentioned, a contrary decision would in substantial effect excise these Code provisions designed to enhance the safety of the workers in the mines. At the same time, the safety purposes underlying the air analysis provisions of section 203(d) are in no way impaired since, but for the applicant's voluntary compliance with the Code provisions, methane would not have been found at all in the critical sample.

We also must emphasize again the above regard, that our decision is strictly confined to the circumstances in this case, where the operator fully complied with the applicable provisions of the Code, and, as a result of this compliance, methane was found by air analysis at the immediate site and under the frozen conditions of the fatal accident. Absent such circumstances, the gassy classification order would properly issue.

I am sure that most would be shocked to read such an outrageous ruling from an administrative agency established to enforce a "safety act" of Congress not an advisory code of an executive agency. The Board, too, had qualms of conscience about this "bad" decision when they added this admonition:

Finally, we must caution, that, although in our opinion the gassy classification order was not justified upon the record of the instant case, *this determination does not mean that the finding of methane should be disregarded either by the applicant or by the respondent. On the contrary, the applicant must now be increasingly vigilant and alert in its conformity with the Code and its compliance with the provisions of Title II of the act. And the respondent, by reason of the circumstances here disclosed, must now increase both the number and the intensity of its inspections, in order to minimize any potential danger to the workers employed underground at this mine.* (Italic supplied)

Here is a board, recognizing the "potential danger to the workers" of this mine from the sudden onrush of methane in a mine where open flames, smoking, and nonpermissible equipment is permitted under the act because it was a nongassy mine, yet they choose to ignore the danger. How indifferent can such a board be. Why did not the workers' representative object? Why did not the union object? Why did not the Bureau of Mines appeal? I have no answer to these questions. I can only surmise that their interests in economics far exceeded their interest in the miner's safety.

When I read this decision, I was sick with the thought of what could have happened at that mine. Fortunately, the mine was finally classed gassy in 1967 by the Bureau and, this time, the Board upheld the Bureau, despite the objections of the operator to an "excessive" number of inspections. The Board noted that it had urged such inspections. But think, 6 years lapsed in which these miners were in constant danger.

SECRETARY OF THE INTERIOR'S POSITION

By letter dated May 23, 1969, Secretary Hickel advised the Congress that the present Board of Review and the one found in H.R. 13690 should be "abandoned." He recommended two alternative approaches. The pertinent part of the Secretary's letter follows:

To date the Board has done a creditable job. It is experienced in mining technology and knows the problems of the miners and the operators. But the Board has had few cases over the last 17 years. It is reasonable to expect that this workload will increase under this legislation, particularly when we consider that the Board will be reviewing civil penalties also. We now believe that a part-time Board would not be satisfactory. In addition, it has come to our attention that, since the bill also covers surface mines, the operators and workers of that part of the industry would have a legitimate claim of discrimination unless the operators and workers of that segment of the industry are represented on the Board.

Upon reflection of all of these factors, we believe that it would be better to abandon the present type of a Board and establish a new review procedure.

One alternative would be to establish a hearing procedure within the Department of the Interior, placing the decision-making authority in the Secretary along the lines of the Administrative Procedures Act or establish a Board subordinate to the Secretary with final decision in the Secretary. This approach, however, raises the age-old criticism leveled against many agencies of fusion of the responsibilities in the Secretary of enforcement, prosecutor, judge, and jury.

The second alternative which we believe to be far superior, and which is followed in the enclosed amendments, would be to establish a 5-member full-time Board as an independent agency not subordinate to the Secretary. We note that the Department of Transportation Act (80 Stat. 931, 935), in establishing the National Transportation Safety Board, transferred many functions of the Secretary of Transportation to the Board and gave it final authority. The Board's membership would include 2 people having a background either by training, education, or experience in mining technology, one having a public health background, and the last 2 being drawn from the general public. Board members under this approach would not have any interest in—financial or otherwise—or hold any office in, the coal mine industry for at least one year prior to their appointment and during the entire term of their appointment. Like the present Board, membership would be for a term of 5 years. The President would designate one of the members as chairman. In order to avoid hiatus between the time of the passage of the bill and the appointment of Board members, the present Board would continue in office in accordance with the conditions under which they were appointed until they are replaced or reappointed under the bill.

The second alternative was defeated in the other body 53 to 24.

The approach taken by the other body and by my amendments is the same as the Secretary's first alternative. I include my amendment to strike the Board at this point in the RECORD:

AMENDMENT TO H.R. 13950 OFFERED BY MR. HECHLER OF WEST VIRGINIA

On page 4, line 24, after the semi-colon insert "and".

On page 5, line 4, change the semi-colon to a period and strike "and".

On page 5, strike lines 5 and 6.

On page 6, line 4, strike "the Board, other".

On page 8, line 3, strike "by the Board".

On page 8, line 7, change the comma to a period and strike out all thereafter through the period on line 9.

On page 8, line 10, strike all through page 9, line 6, and substitute the following:

(f) Promptly after any such notice is published in the Federal Register by the Secretary under subsection (e) of this section, the Secretary shall issue notice of, and hold a public hearing for, the purpose of receiving relevant evidence. Within sixty days after completion of the hearings, the Secretary shall make findings of fact which shall be public. In the case of mandatory safety standards, the Secretary may promulgate such standards with such modifications as he deems appropriate. In the case of mandatory health standards, the Secretary shall transmit his findings to the Secretary of Health, Education, and Welfare who may, upon consideration of the Secretary's findings of fact, direct the Secretary to promulgate the mandatory health standards with such modifications as the Secretary of Health, Education, and Welfare deems appropriate and the Secretary shall thereafter promulgate the mandatory health standards.

On page 20, line 1, strike after the period through page 21, line 14, and substitute the following:

The applicant shall send a copy of such application to the representative of miners in the affected mine, or the operator, as appropriate. Upon receipt of such application, the Secretary shall cause such investigation to be made as he deems appropriate and shall promptly hold a public hearing for the purpose of receiving relevant evidence relating to the issuance and continuance of such order. The operator and the representative of the miners shall be given written notice of the time and place of the hearing at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code.

(b) Upon completion of the hearing, the Secretary shall make findings of fact, and he shall issue a written decision vacating, affirming, modifying, or terminating the order complained of, or the modification or termination of such order, and incorporate his findings therein.

(c) In view of the urgent need for prompt decision of matters submitted to the Secretary under this section, all actions which the Secretary takes under this section shall be taken as promptly as practicable, consistent with the adequate consideration of the issues involved.

(d) Pending completion of the proceedings required by this section, the applicant may file with the Secretary a written request that the Secretary grant temporary relief from any order issued under section 104 of this Act, except section 104(a) of this Act, or from any modification or termination of any order issued under section 104(g) of this Act, together with a detailed statement giving reasons for granting such relief. The Secretary may grant such relief, under such conditions as he may prescribe, if—

(1) a hearing has been held in which all parties were given an opportunity to be heard;

(2) the applicant shows that there is substantial likelihood that the findings of the Secretary will be favorable to the applicant; and

(3) such relief will not adversely affect the health and safety of miners in the affected coal mine.

On page 21, line 15, strike all through page 30, line 19.

On page 30, line 21, strike all through page 31, line 20, and substitute the following:

SEC. 108. (a) Any decision issued by the Secretary under section 105 of this Act shall be subject to judicial review by the United States court of appeals for the circuit in

which the affected mine is located, or the United States Court of Appeals for the District of Columbia Circuit, upon the filing in such court within thirty days from the date of such decision of a petition by the operator or a representative of the miners in any such mine aggrieved by the decision praying that the decision be modified or set aside in whole or in part. A copy of the petition shall forthwith be sent by registered or certified mail to the other party and to the Secretary and thereupon the Secretary shall certify and file in such court the record upon which the decision complained of was issued, as provided in section 2112 of title 28, United States Code.

(b) The Court shall hear such petition on the record made before the Secretary. The findings of the Secretary, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify any such decision or may remand the proceedings to the Secretary for such further action as it may direct.

(c) Pending review of an decision issued by the Secretary under section 105 of this Act, except a decision pertaining to an order issued under section 104(a) of this Act, the court upon request, may, under such conditions as it may prescribe, grant such temporary relief as it deems appropriate pending final determination of the proceeding if—

(1) all parties to the proceeding have been notified and given an opportunity to be heard on a request for temporary relief;

(2) the person requesting such relief shows that there is a substantial likelihood that he will prevail on the merits of the final determination of the proceedings; and

(3) such relief will not affect the health and safety of miners in the coal mine.

On page 32, line 2, strike "Board's" and insert "Secretary's".

On page 32, line 4, strike "Sec. 109" and insert "Section 107".

On page 34, line 2, strike "Sec. 110" and insert "Sec. 108".

On page 35, line 9, strike "Sec. 111" and insert "Sec. 109".

On page 36, line 3, strike "Board" and insert "Secretary".

On page 37, line 22, strike "Sec. 112" and insert "Sec. 110".

On page 43, line 11, strike "Sec. 113" and insert "Sec. 111".

On page 48, lines 10 and 14, strike "the Board" and insert "the Secretary of Health, Education and Welfare".

On page 49, line 9, strike the comma after "Secretary" and strike "the Board".

On page 106, line 5, strike all through line 7, and substitute the following:

Sec. 401. (a) The Secretary and the Secretary of Health, Education and Welfare, as appropriate, shall conduct such studies, research, experiments, and demonstrations as may be appropriate.

On page 108, line 1, strike all after "(b)" through the period on line 5.

On page 108, line 13, strike all after the period through the period on line 15.

On page 108, line 24 strike "the Board" and insert "the Secretary".

On page 109, lines 1, 7, 11, 16, 20 and 22, strike "Board" and insert "Secretary".

On page 109, lines 1, 4, and 5, strike "it" and insert "the Secretary".

On page 109, lines 7, 18, and 20, strike "it" and insert "the Secretary and the Secretary of Health, Education and Welfare".

On page 115, line 2, strike the period and insert a comma and the following "except as provided in section 105 of this Act".

On page 117, lines 8 and 15, strike "Board" and insert "Secretary".

FORMER VICE PRESIDENT HUBERT H. HUMPHREY AND NAPCO INDUSTRIES OF MINNEAPOLIS

The SPEAKER pro tempore (Mr. PRICE of Illinois). Under previous order of the House, the gentleman from Iowa (Mr. GROSS) is recognized for 30 minutes.

Mr. GROSS. Mr. Speaker, new evidence has been filed in the U.S. district court in Detroit which shows for the first time the key role played by former Vice President Hubert H. Humphrey in the fraud perpetrated against the Government by Napco Industries of Minneapolis, Minn.

It will be remembered that Napco, with its powerful ties to Humphrey, was able to hoodwink the Agency for International Development into paying a tremendously inflated price for its virtually obsolete, worn-out gear manufacturing plant, which was then dumped on a group of unsuspecting investors in India.

It will also be remembered that one of the chief architects of this $4 million swindle was Max M. Kampelman, Humphrey's former legislative assistant and one of his closest and most trusted advisers.

The papers filed in court spell out a sorry and sordid connivance and they show that Humphrey was, at best, an unwitting tool of a group of fixers, led by Kampelman, and included one of his most stalwart financial supporters. That is the most charitable role in which Humphrey can be placed, for if he was not an unwitting tool, he had to be a knowing accomplice.

Humphrey, when he was finally forced to say something publicly about his role in this deal, piously dismissed it as a "routine" service to a constitutent.

In order to understand his true involvement in this case, one has only to read the documents on file in the court.

As early as December 22, 1960, the Washington promoter hired by Kampelman to help obtain the loan for Napco—one Paul R. Gibson—was writing to Napco president, the late Max E. Rappaport, that:

> We have everything we need except (a) the political pressure to be applied after January 20, 1961, and (b) a few more nice letters from NAPCO and/or Detroit Bevel Gear customers.

Then, on January 31, 1961, the promoter wrote Rappaport again:

> Max Kampelman and I further agreed that the assistance of Senator Humphrey, Orville Freeman, and perhaps a Minnesota Congressman, would be utilized to telephone the various members of the Development Loan Fund Board of Directors prior to this project being presented before that group for a final decision.

Mr. Humphrey subsequently conducted an international letter writing campaign in behalf of Napco but claimed he had disassociated himself from the case before the loan was approved by the AID agency in June of 1962.

According to the New York Times, Mr. Humphrey pulled out because he was warned by friends at the State Department that the project "was beginning to look smelly."

Mr. Speaker, according to the documents filed in the Detroit Court, this simply was not true. Humphrey did not cease his efforts on behalf of Napco.

In a letter to Kampelman on November 1, 1962, the loan promoter, Gibson, states the following:

> DEAR MAX: At lunch today John Ulinski (the Government official who handled most of the work in connection with the loan) advised me that it was perfectly proper for Senator Humphrey to send C. Tyler Wood, Economic Minister, American Embassy, New Delhi, a cable similar to the one the Senator sent to Desai.

It is obvious that there was some doubt in somebody's mind whether this was a proper thing for Humphrey to do, but it is interesting to note that the advice that it was "perfectly proper" came from a man who had won a promotion with the active help of Max Kampelman.

Kampelman and his crowd apparently left no stone unturned in pushing this deal. On November 28, 1961, eleven months before Mr. Ulinski's advice concerning the Humphrey cable, the loan promoter, Gibson, wrote Kampelman a letter labeled "confidential" in which he thanked him for his aid to Ulinski:

> DEAR MAX: Please accept my sincere appreciation for your efforts in the case of John Ulinski. John has been promoted to GS–16 and has been given the India-Ceylon-Nepal Desk, South Asia Region, of A.I.D.
>
> I have told John that you intervened in his behalf and I know that he is most grateful.

This letter, of course, raises the interesting question as to how, and from whom, Kampelman sought favor for the AID official who was considering the Napco loan.

Let us return, however, to Humphrey's continuing role in the loan itself.

Several days after Ulinski's advice on the cable to C. Tyler Wood, Kampelman wrote to Max Rappaport on November 9, 1962 as follows:

> DEAR MAX: Senator Humphrey received the following cable from Ambassador Galbraith in India:
>
> "Wood attempting expedite government clearance. Will report further developments."

Then, on November 13, 1962, Kampelman again wrote to Rappaport, enclosing copies of two identical cables from Humphrey to two members of the Indian Government's Planning Commission in New Delhi. The cables said this:

> Respectfully request your personal examination US AID approved project establishing Napco Bevel Gear India. Important India defense and economy. Personally familiar with project. Informed collaboration agreement delayed by your commission. Trust matter can be expedited.

As I have said, Mr. Speaker, when some of Humphrey's role in this fraud against the United States became known, his office claimed he gave Napco only routine constituent service.

According to the New York Times, Humphrey's office stated that:

Our senatorial office referred all inquiries from Minnesota business constituents to the appropriate agencies without discussing the merits.

Of course, the Times was also told that Humphrey had pulled out of the case before the loan was ever made.

It is obvious from the documents filed in court that neither statement was true.

The loan, as I have pointed out, was approved in June of 1962. These three cables—one to C. Tyler Wood and two to the Indian Commissioners—were sent in November 1962.

Yet Humhprey was still active in the case 2 years later.

For example, the court file contains a copy of a letter of May 12, 1964—from Humphrey to U.S. Ambassador to India Chester Bowles, in which Humphrey expresses his concern over learning from a Napco official that the project was in serious trouble.

Humphrey then goes on to "strongly urge your cooperation in expediting" consideration of a Cooley loan to help bail out the project.

He states to Ambassador Bowles that if the project failed—

The inevitable damage to the climate for American investment in India, the blow to the prestige of a United States-based company, and the loss of enormous amounts of time and effort which have already been expended to bring this project to its present very nearly operable state would be highly unfortunate.

Humphrey concludes by urging that Ambassador Bowles meet with the Napco official, "and to take whatever steps seem to be helpful and effective." He said:

Anything you can do to solve this immediate crisis and give the company an opportunity to get into operation will be greatly appreciated.

And on June 30, 1964, we find Humphrey writing an even longer letter to William S. Gaud, then Deputy Administrator of AID, urging approval of "an additional Cooley loan" because the project was in such trouble that $1,000,000 was needed quickly. Humphrey wrote:

I think it is important that we recognize that to solve the problem adequate funds will be required and on reasonable terms.

What Humphrey meant by "reasonable terms" is this:

Prior to the time that Kampelman persuaded Humphrey to go to bat again for a project that Humphrey had been told in 1962 "was beginning to look fishy," AID officials had been adamant that any Cooley loans made to Napco would have to carry a 50-percent guarantee by the company.

After Humphrey wrote his June 30, 1962, letter to Mr. Gaud, and apparently followed that with telephone calls to AID, the loan guarantee was reduced to 25 percent.

I think everyone will agree, Mr. Speaker, that a 25-percent obligation to repay a loan is certainly "reasonable" as far as the recipient of the loan is concerned. But it is completely unreasonable from the standpoint of those who put up the money—in this case the helpless taxpayers of this Nation.

Nowhere, in the documents I have seen, do I find even the most remote, the most casual regard on the part of the former Vice President for the interests of the taxpayers of this Nation.

Whether his continued and ardent support of this smelly loan application, and the subsequent loan requests, was a demonstration of sheer naivete on Humphrey's part, I cannot say. Certainly that is the most charitable view to be taken of his role.

His repeated intercessions on behalf of Napco may have been mere cronyism.

They may have been prompted by the pointed reminder from Rappaport that he, Rappaport, had served as a fund raiser in many of Humphrey's campaigns.

At any rate, it is obvious that Humphrey was persuaded by Kampelman and Rappapart to misuse his prestigious public office, and thereby grievously abuse a public trust, in influencing decisions of Government agencies and officials, both here and abroad.

Humphrey is plainly guilty of highly improper conduct for his role in this most shoddy affair and it is a sad commentary on a former public official to recall the evasive and misleading statements concerning his role in it that were issued to the press by his office in the past.

LARGE NUMBER OF BANK HOLDING COMPANIES AIDED BY GRANDFATHER CLAUSE IN H.R. 6778 AS REPORTED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman Texas (Mr. PATMAN) is recognized for 60 minutes.

Mr. PATMAN. Mr. Speaker, in the committee report—No. 91-387—of the House Banking and Currency Committee on H.R. 6778, a bill to amend the Bank Holding Company Act of 1956, I stated in individual views my strong opposition to any grandfather clause in this legislation, especially the very recent date of February 17, 1969, found in the bill as reported.

In my individual views it was stated that I was having compiled a list of all one-bank holding companies benefiting by any grandfather clause exempting nonbank acquisitions consummated in recent years. The data have now been collected. They reveal the following:

A total of 239 one-bank holding companies formed on or after January 1, 1965, and carrying on one or more nonbanking activities has been identified—table 1.

These 239 one-bank holding companies operate 575 nonbank subsidiaries—table 2—engaged in no less than 124 different nonbank activities—table 3.

These 239 one-bank holding companies are located in 33 States and the District of Columbia—table 2. They operate banks in 31 States, having total deposits of over $15 billion—table 1.

Among the one bank holding companies whose nonbank activities are exempted from divestiture under the proposed grandfather clause are the largest independent finance company in the United States—assets $3.7 billion—the largest trading stamp company in the United States—assets $422 million; the 114th and 293d largest industrial companies in the United States—assets $605 million and $667 million, respectively; the sixth largest retailing company in the United States—assets $2.6 billion; and a holding company controlling the 29th largest commercial bank in the United States—deposits $1.5 billion—table 5.

The nonbank activities of these recently created one bank holding companies are likewise spread through the United States and are carried on in 33 States and the District of Columbia—table 4. The total assets of these companies run into the many billions of dollars.

The nonbank activities of these bank holding companies range over the entire spectrum of business activity, but are heavily concentrated in the following areas: insurance agencies, insurance companies, real estate, various types of credit and finance companies, department stores and retail outlets, and many types of manufacturing concerns.

A few of the most significant one bank holding companies receiving substantial benefits from the February 17, 1969, grandfather clause are the following:

Sperry & Hutchinson Corp., New York, N.Y. This one-bank holding company controls the $318 million State National Bank of Bridgeport, Conn., along with several department stores, the largest trading stamp operation in the United States, a travel agency, the Bigelow-Sanford Carpet Manufacturing Co., a company manufacturing office and industrial furniture, a real estate company, and textile manufacturing concerns.

National Lead Co., New York, N.Y. In addition to controlling the $295 million Lake View First Savings Bank of Chicago, Ill., this one-bank holding company controls a large number of subsidiaries engaged in a wide variety of nonbanking activities. These include the manufacture of plastic sheeting, aluminum, bronze and brass castings, wood veneers, clay and glass sand, drilling and logging equipment, and electronics products; a lumber company; a real estate company; a die castings company; a smelting company; and a company processing and refining castor oil.

CIT Financial Corp., New York, N.Y. This giant conglomerate controls the $1.4 billion National Bank of North America in New York City. It is the largest independent finance company in the country with $3.7 billion in assets. In addition to these activities, CIT Financial Corp. has subsidiaries engaged in the underwriting of fire and casualty insurance; the construction business; the manufacture of office furniture and accessories; the leasing of cars and trucks; the manufacturing and sale of greeting cards, party goods and gift wrappings; the manufacture and sale of desk top com-

puters; and the manufacture and sale of scientific and research instruments, photographic chemicals and hospital communications systems.

General American Transportation Corp., Chicago, Ill. This one-bank holding company controls the $401 million LaSalle National Bank of Chicago, Ill., and in addition has subsidiaries engaged in manufacture of industrial equipment. It is also one of the largest companies in the country engaged in the leasing of aircraft and railroad equipment.

Montgomery Ward & Co., Inc., Chicago, Ill. In addition to controlling the $203 million Pioneer Trust & Savings Bank, Chicago, Ill., this one-bank holding company is one of the largest retail merchandisers in the country. It also has subsidiaries manufacturing concrete pipe and blocks; TV receivers and phonographics; and industrial paints and finishes.

Gamble-Skogmo, Inc., Minneapolis, Minn. This large conglomerate, in addition to controlling the Gamble's Continental State Bank of St. Paul, Minn., operates a mail-order house; department stores, and other retail chains; a life insurance company; controls a developer and lessor of real estate; a travel agency; a food store chain; a drugstore chain; a company doing outdoor advertising; a communications company; a finance company; and radio stations.

Union Bancorporation of Los Angeles. In addition to controlling the $1.5 billion Union Bank of Los Angeles, this one-bank holding company controls subsidiaries engaged in data processing services, originating and servicing loans for sales to insurance companies, acting as independent insurance agents and brokers, and real estate development.

Baldwin-Central, Inc., Cincinnati, Ohio. In addition to controlling the $216 million Central Bank & Trust Co. of Denver, Colo., this one-bank holding company also controls the $148 million Empire Savings Building & Loan Association of Denver, as well as companies engaged in the manufacture of transistors and integrated circuits, the sale of credit life insurance, the manufacture of pianos and other musical instruments, and the publishing of printed material.

NLT Corp., Nashville, Tenn. This one-bank holding company controls the $428 million Third National Bank of Nashville, and, in addition, controls the $1.5 billion National Life & Accident Insurance Co. It also operates leading radio and TV stations in Nashville, WSM–TV and WLWM–FM, as well as a large mortgage banking company.

Bankers Life & Casualty Co., Chicago, Ill. This bank holding company controls the Citizens Bank & Trust Co. of Park Ridge, Ill. It also holds 24 percent of the stock of Royal National Bank of New York, N.Y. The president of Bankers Life & Casualty Co. holds an additional 11 percent of Royal National Bank stock, and other officers and directors of the holding company hold 60 percent of Royal National Bank stock. Therefore, in all, Bankers Life & Casualty Co. along with its officers and directors control 95 percent of two banks. The parent company also controls subsidiaries involved in the following activities: real estate holdings; engineering research and manufacturing; real estate development; and life, health and accident insurance underwriting.

American General Insurance Co., Houston, Tex. This one-bank holding company controls the $925 million Texas National Bank of Commerce, Houston, Tex., and also controls two insurance companies with total assets of approximately $590 million in the life, fire and casualty insurance fields. In addition, one of these insurance companies has a subsidiary which operates a television channel, an AM radio station and an FM radio station.

American Financial Corp. of Cincinnati, Ohio. This one-bank holding company controls the $245 million Provident Bank of Cincinnati, Ohio, and is also engaged through its subsidiaries in the construction and development of offices and homes; computer leasing; sale of insurance; the ownership of real estate; the ownership of savings and loan associations; and the underwriting of life insurance.

International Bank of Washington, D.C. This one-bank holding company controls the $190 million Central National Bank & Trust Co. of Des Moines, Iowa, and, in addition, controls subsidiaries engaged in such activities as the manufacture and sale of sound, acoustical and building materials; finance business; real estate business; communications business; fire and casualty insurance underwriting; manufacture of roofing products; operation of a mortgage company and merchant banking.

Budget Holding Co. of Los Angeles, Calif., controlled by Budget Industries, Inc. of Los Angeles. This holding company complex controls, in addition to the Century Bank of Los Angeles, large casualty, life, accident and health insurance companies, a finance company and a savings and loan association.

United States Finance Co. of Jacksonville, Fla., now known as the Unicapital Corp. In addition to controlling the First National Bank of Cape Canaveral, Fla., this one-bank holding company has subsidiaries engaged in such activities as real estate, finance companies, a furniture retailing chain, gas compression service for oil companies, mortgage originating and servicing activities, and insurance agency activities.

The Charter Co. of Jacksonville, Fla. This one-bank holding company controls the Jacksonville National Bank of Jacksonville, Fla., and also controls subsidiary companies engaged in such activities as title insurance, mortgage banking, insurance agency activities, real estate agent operations, housing construction, owning and operating motels and other real estate, operator of service stations, tire stores and convenience food markets.

TeleAccounting Bureau, Inc., of Cincinnati, Ohio, a subsidiary of Realty Equities Corp. of New York. This one-bank holding company controls the First National Bank of Harrison, Ohio. In addition, it controls subsidiaries in the following fields: real estate brokerage; savings and loan association operations; industrial and business development; general insurance agency; racetrack owner and operator; motion picture producers; and ownership of hotel and health resorts.

Citizens Finance Corp., Cleveland, Ohio. This one-bank holding company controls the Newark Trust Co. of Newark, Ohio, and, in addition, controls companies which finance home improvements; operate cable television services; manage real estate; furnish data processing services; originate and broker real estate loans; offers mortgage banking, loan servicing and mortgage closing escrow services.

Sterling Precision Corp. of New York. This one-bank holding company controls the Milwaukee Western Bank of Milwaukee, Wis., and in addition controls subsidiaries engaged in land development; manufacture of cutlery blades; operator of finance company; real estate investor; sheet metal fabricators; producer of office supplies; financer of residential home mortgages; and manufacture of office furniture and truck trailers.

The above list of one-bank holding companies indicating their banking, as well as their diverse nonbanking, interests are but 19 of the 239 one-bank, holding companies receiving substantial favoritism from the present grandfather clause in H.R. 6778. The special privileges ganted by such an amendment are real and very valuable. The one-bank holding company beneficiaries of these special privileges could, unlike all other regulated bank holding companies, continue to operate and expand to an unlimited degree their present nonbanking, as well as their banking, activities. This is precisely what the Bank Holding Company Act is intended to prevent.

The largest single activity in which recently formed one-bank holding companies are engaged is the insurance agency business. A summary of all identifiable one-bank holding companies engaged in the insurance agency business is found in table 7, which shows a total of 229. Of these 229 one-bank holding companies engaged in the insurance agency business, more than half, or 125, were formed in 19 States in the little more than 4 years between January 1, 1965, and February 17, 1969. The survey was able to identify only 104 one-bank holding companies engaged in the insurance agency business that were created in the 50 years between 1914 and 1964—tables 8 and 9. Therefore, there is a clear and substantial movement of unregulated bank holding companies into the insurance agency business since 1964 as compared to previous periods.

The data collected and presented here clearly show the extent to which any grandfather clause, and particularly one of recent date, favors a special group of one-hank holding companies engaged in a broad range of nonbank activities. This mixing of banking and nonbanking activities would otherwise be illegal under

the Bank Holding Company Act as amended by H.R. 6778. Despite claims to the contrary, the special advantage given by the grandfather clause is not merely theoretical or minor. It has serious practical consequences.

To allow this special interest legislation to pass would create a major breach in the whole concept of banking legislation in this country—that of separating banking from nonbanking activities. It would also create an extremely unfair competitive advantage whereby a few hundred companies could continue to mix and expand their banking and nonbanking activities while both their banking and nonbanking competitors, who are not exempted under the act, would fail to enjoy the same advantage. This is clearly neither in the public interest nor in the best interest of a vast majority of the banking industry or their nonbank competitors.

I would also like to include at this point in the RECORD the tables cited in this statement, along with my statement before the Rules Committee this morning on the holding company issue:

STATEMENT OF CHAIRMAN WRIGHT PATMAN BEFORE HOUSE RULES COMMITTEE ON H.R. 6778, OCTOBER 21, 1969

As Chairman of the House Banking and Currency Committee, I am appearing before the Rules Committee today to request a rule for H.R. 6778, a bill to amend the Bank Holding Company Act of 1956 and for other purposes.

This bill was considered at length by our Committee in the spring of this year. Seventeen days of public hearings were held between April 15 and May 9, 1969, and the Committee ordered this legislation reported on June 27, 1969. The bill was reported from the Banking Committee on July 23, 1969.

Briefly, this legislation (1) for the first time brings holding companies controlling 25 percent or more of the stock of *one* bank under the regulation of the Bank Holding Company Act; (2) it changes slightly the definition of activities which bank holding companies may engage from that set forth in the 1956 Act; (3) it prohibits nonbank subsidiaries of bank holding companies from engaging in the insurance agency business, and the underwriting, public sale or distribution of mutual funds; and (4) it permits bank holding companies being brought under regulation for the first time by this legislation to continue to carry on all nonbank activities operated by them prior to February 17, 1969.

This is an extremely important piece of legislation. Its original intention was to plug a serious loophole in the Bank Holding Company Act as passed by Congress in 1956. Congress has for many years gone on record supporting a clear separation of bank and bank-related activities from other business activities. Because of the so-called one bank loophole, corporations which control only one bank can, at the same time, enter any nonbanking activity they wish. In the last three or four years the impetus to subvert the separation of banking from nonbanking through this device has been tremendous.

In terms of bank deposits, most of the growth of unregulated bank holding companies has taken place from 1965 to date. In the 1965 to 1968 period, the number of these unregulated bank holding companies rose by over 200, while the amount of bank deposits in these companies rose by over 600 percent, from $15.1 billion in 1965 to $108.2 billion at the end of 1968. This latter figure has been considerably added to during 1969. Hardly a day goes by when there is not another announcement of the formation of a new one bank holding company. Possibly as much as 40 percent of all commercial bank deposits is now held by one bank holding companies. Among those that have converted to one bank holding company status are 9 of the 12 largest commercial banks in the United States.

While H.R. 6778, as amended and reported by the Banking and Currency Committee, does for the first time bring one bank holding companies under Federal regulation, the bill, as reported, also contains, in the opinion of several members of the Committee, including myself, certain grave deficiencies and omissions which must be corrected by amendment if Congress is to deal with this most serious economic problem in an effective and thorough way. Therefore, a number of amendments will be offered on the Floor concerning these deficiencies. Some of these amendments, I am led to believe, will receive support both from Democratic and Republican members of the Committee.

Perhaps the most glaring deficiency in the bill is the so-called grandfather or forgiveness clause. The basic principle embodied in the Bank Holding Company Act is to completely divorce bank and bank-related activities from all other business activities. The February 17, 1969, grandfather clause in the bill as reported, would reward certain one bank holding companies by permitting them to engage in a large number of nonbank-related activities simply because those who control these companies anticipated that Congress would plug the one bank loophole. Such a grandfather clause is bad for a number of reasons:

It rewards those, for no particular reason, who entered nonbank related businesses prior to the cut-off date in order to avoid regulation.

It creates unfair competition for banks and bank holding companies which would have to compete on unequal terms with those gaining an advantage from the grandfather clause.

It permits a large number of important banking institutions to engage through the holding company device in a substantial number of nonbank-related activities and would, therefore allow them to compete unfairly with nonbank competitors.

Personally, I am opposed to any grandfather clause. The present Act provides for up to a five year period within which the newly regulated holding companies could divest themselves of nonqualifying nonbank activities. In addition, Congress has traditionally permitted such divesture to take place on a tax free basis, since it is required by change in the law.

However, the Congress did recognize in 1956, when the original Bank Holding Company Act was passed, that there were a substantial number of one bank holding companies operating very small banks in smaller communities which could only be profitable if they were allowed to engage in nonbank activities. Therefore, some contend that a reasonable exemption from the Bank Holding Company Act should be provided for these small, traditional one bank holding companies. It is clear that neither the grandfather date in H.R. 6778, as reported, of February 17, 1969, nor the grandfather date supported by the Administration of June 30, 1968, is necessary to protect these small, traditional one bank holding companies. The principal advantage of these dates is to allow a few large holding companies created between 1965 and 1968 or early 1969 to continue to mix banking and nonbanking activities.

If there must be a grandfather clause, it seems to me that there are two reasonable alternative approaches. One would be to set the grandfather clause date at January 1, 1965. The reason for this is that the movement of large corporations, both banking and nonbanking, into the one bank holding company field began in 1965. Almost all of the one bank holding companies existing before 1965 were the small, traditional one bank holding companies.

Because of my concern for the special privileges that would be obtained by certain corporations due to such a late grandfather clause as February 17, 1969 or June 30, 1968, I stated in my individual views printed along with the report on H.R. 6778 that I would provide all members of Congress with data concerning the corporations benefitting from that date. The basic findings of this survey are as follows:

A total of 239 one bank holding companies formed on or after January 1, 1965, and carrying on one or more nonbanking activities has been identified.

These 239 one bank holding companies operate 575 nonbank subsidiaries engaged in no less than 124 different nonbank activities.

These 239 one bank holding companies are located in 33 States and the District of Columbia. They operate banks in 31 States, having total deposits of over $15 billion.

Among the one bank holding companies whose nonbank activities are exempted from divestiture under the proposed grandfather clause are the largest independent finance company in the United States (assets $3.7 billion); the largest trading stamp company in the United States (assets $422 million); the 114th and 293d largest industrial companies in the United States (assets $605 million and $667 million, respectively); the 6th largest retailing company in the United States (assets $2.6 billion) and a holding company controlling the 29th largest commercial bank in the United States (deposits $1.5 billion).

The nonbank activities of these recently created one bank holding companies are likewise spread throughout the United States and are carried on in 33 States and the District of Columbia. The total assets of these companies run into the many billions of dollars.

The nonbank activities of these bank holding companies range over the entire spectrum of business activity, but are heavily concentrated in the following areas: insurance agencies, insurance companies, real estate, various types of credit and finance companies, department stores and retail outlets, and many types of manufacturing concerns.

It is clear from the examination of these detailed data that the basic purpose of this legislation would be substantially defeated by a grandfather clause with a date as late as 1968 or 1969. If we use a date it should be before any major movement toward the use of the one bank holding company loophole by large corporate entities whether centered around bank or nonbank activities.

A second alternative to the problem of the small, traditional one bank holding company would be the use of a so-called asset test. This would exempt from regulation of the Bank Holding Company Act all bank holding companies whose banks had total assets of less than a certain figure and whose nonbank assets were less than a designated amount. One proposal that has received wide comment was made during our hearings on H.R. 6778 by Vice Chairman J. L. Robertson of the Federal Reserve Board. His proposal was to exempt all bank holding companies with banking assets of less than $30 million and nonbank asset of less than $10 million.

In some ways this proposal is a better approach to the problem than the use of any cut-off date. Under the asset test, there would be no blanket exemption from the Act as there would by using a date. As soon

as a holding company's bank assets or nonbank assets exceeded the limit prescribed, they would be required to register with the Federal Reserve Board and be subjected to regulation under the Act.

As stated earlier, I am opposed personally to any grandfather clause. However, if it is found necessary to accept a grandfather clause, the best alternatives are either an early date, such as January 1, 1965, or the asset test as proposed by Governor Robertson of the Federal Reserve Board.

It is my understanding that Congressmen Moorhead, Blackburn and Chappell, who are distinguished members of the Banking and Currency Committee, yesterday introduced a bill to amend the Bank Holding Company Act. This bill incorporates many of the amendments suggested in the additional views signed by 12 members of the Committee, including myself. These views appeared along with the report on H.R. 6778. I believe this is a constructive proposal and should be given serious consideration.

TABLE 1.—NUMBER OF 1 BANK HOLDING COMPANIES FORMED ON OR AFTER JAN. 1, 1965, OPERATING NONBANKING SUBSIDIARIES—LISTED BY STATE IN WHICH BANK IS LOCATED

	Number of holding companies	Bank deposits (millions)		Number of holding companies	Bank deposits (millions)

OIL IMPORT QUOTA PROGRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. CONTE) is recognized for 20 minutes.

Mr. CONTE. Mr. Speaker, recent developments concerning the President's Cabinet Task Force on Oil Import Control present both a hope and a challenge to those of us who have long been opposed to the restrictive oil quota system.

The hope I speak of is based on several administration submissions to the task force recommending substantial alterations in, if not the total abolition of, the mandatory oil import program.

The challenge is that a massive effort is now underway to discredit the task force staff in the eyes of both the White House and task force members.

Mr. Speaker, I am sure I speak for all 53 cosponsors of my bill to end the quota system, and many more Members as well, in urging both the task force and the President to resist these pressures.

Already, Mr. Speaker, there have been several encouraging signals coming from administration sources.

First, and perhaps most important, Assistant Attorney General Richard W. McLaren, Chief of the Justice Department's Antitrust Division, has recommended abolition of the quotas, saying they have no relation to "any reasonable national security goal."

Second, the task force staff itself has released a study predicting that Alaskan north slope oil can be sold competitively with foreign oil—even without import restrictions.

Third, the Department of Defense has reported to the task force that, at a minimum, all Western Hemisphere oil sources are secure, and that the best way to assure they remain secure sources is to allow imports freely from those areas.

Finally, the Department of Interior has submitted studies to the task force backing up our contention that the cost of the program to consumers is considerable, and that the stockpiling of oil would be a far cheaper method of providing for emergency needs.

These and other studies, Mr. Speaker, have, according to some press accounts, led the task force staff to recommend substantial changes in our present inequitable and indefensible Government oil policy. The staff is now circulating several of these so-called "fact papers" among task force members. I include at the close of my remarks several copies of recent stories in the oil press on this subject.

It is no surprise, then, that the major oil lobbyists are now hard at work seeking to discredit the task force effort.

But it is a supreme irony, Mr. Speaker, that the same oil barons who called for this task force study in the first place are now disappointed with the very creature they brought into being.

Only last February, the American Petroleum Institute and its chairman, Mr. Michael L. Haider, who also happens to be chairman of the board of Standard Oil of New Jersey, urged the President to set up the task force. I include a copy of that letter at the close of my remarks.

Despite this irrefutable documentary evidence, some major oil propagandists, in their zeal to disown their unruly child, are already claiming that it was the "politicians" who caused the creation of the task force. Mr. Gene Kinney attempts this in a recent article in the Oil & Gas Journal for October 13, 1969. I also include this article at the close of my remarks.

But, Mr. Speaker, the oil barons cannot escape the facts. It was the oil lobby, and not the "politicians" seeking to end the quotas, who pushed for the creation of the task force.

I think the evidence is clear, Mr. Speaker, that the main purposes of the task force proposal were to delay a decision about to be made on the application for a free port and refinery at Machiasport, Maine, and, in general, to stall any further action in the direction of reforming our oil policies.

Although I was convinced that the subject had been studied to death, I have cooperated with the task force, submitting my own proposal in which I explained the purposes of my bill and urged the task force to support it.

And, as I have pointed out, a number of excellent studies submitted to the task force have also recommended either abolition of the quotas or greatly increased imports.

It is, of course, too early to predict what the task force will finally recommend and what the President will decide.

Mr. Speaker, I certainly do not suggest that the concerted effort now underway to discredit the task force staff will easily sway the distinguished membership of the task force, or the President himself.

I believe this administration is committed to giving this question the most objective look possible, and that it fully intends to decide these questions of oil policy on their merits.

But I am also convinced that those of us who favor serious reform must renew our efforts. We cannot permit this cynical lobbying effort to scuttle the work of the task force.

If the facts are made clear to the public, particularly by my colleagues from the Northeast in this and in the other body, I believe we can meet this latest challenge.

Surely all of us here know that the oil lobby can be a most powerful foe. But the truth is far more powerful.

The public has a right to know that truth. And, when they do, I am convinced that the effort of the oil industry to discredit the work of the task force staff will fail.

The material referred to follows:

FEBRUARY 5, 1969.

Dr. ARTHUR F. BURNS,
Counselor to the President,
The White House.

DEAR MR. BURNS: Mr. Michael L. Haider, Chairman of the Board of Directors of the American Petroleum Institute, and I would like to submit to you for your consideration the attached memorandum. This memorandum urges the creation of a Cabinet level Committee for the purpose of studying and re-evaluating the Mandatory Oil Import Program.

Mr. Haider and I would welcome an opportunity to discuss this matter with you personally.

Yours very truly,

FRANK N. IKARD,
President, American Petroleum Institute.

[From Oil & Gas Journal, Sept. 29, 1969]

INTERIOR STAFF EXPLODES IMPORTS BOMB

THE SEARCH for cheaper alternatives to oil-import controls drew support last week from a Department of Interior staff report.

The report concludes that emergency stor-

age in Gulf Coast salt domes would cost far less than spare productive capacity or other hedges against loss of foreign supplies.

The draft analysis, which does not represent a departmental position, nevertheless is expected to have major influence on policy.

The series of nine "technical" papers submitted to the Cabinet Task Force on Oil-Import Controls estimates the cost of a strategic reserve in salt-dome storage at only 39¢/bbl (Table 1).

This is based on availability of 5,000,000 b/d of supply in 1975 and 6,000,000 b/d in 1980 under liberalized import controls.

Next in line among the nine alternatives calculated is the present control program, exclusive of the costs assigned to prorationing. This is computed at 67¢/bbl. Department economists estimated the cost of the present controls, including additional costs assigned to prorationing, at $1.04/bbl.

Impact of studies. The Interior papers were presented to the task force staff at a time when it is reaching conclusions on factual issues in the policy review ordered by President Nixon in February.

The papers, coming from a respected source, are expected to greatly influence task-force conclusions.

And these factual determinations, in turn, will inevitably tip policy decisions in one direction or another.

The Interior papers point strongly toward a combination of increased imports with controls, together with provisions for emergency supplies in salt-dome storage.

Unless these figures are refuted, they will carry great weight in policy discussions by the cabinet group. The task force staff is at the point of winding up the factual portion of its review.

The next step, task force officials say, will be to obtain comments from oil experts at the staff level of interested government agencies. After running this gauntlet, the "fact" papers, along with the various policy alternatives suggested by them, will be considered with the cabinet members.

From these exchanges will come the report to the president, due by Thanksgiving, outlining possible revisions in import controls.

The cabinet members and their top aides are due to gather at some hideaway outside the capital in the next several weeks to hammer out basic decisions to go into the report.

Cost of alternatives. The Interior studies show the cost of a strategic reserve would be relatively small over the next decade using salt-dome storage (see table 2).

TABLE 1.—THE ESTIMATED COST OF KEEPING STRATEGIC OIL RESERVE

Type reserve	Amount per barrel per year	
	1975	1980
Salt-dome storage	[1] 0.39	[1] 0.39
Oil-shale Case II	[2] 1.45	[2] .51
Present program (exclusive of proration)	.67	.68
Oil-shale Case I	[2] 1.45	[2] .68
Subsidized oil-exploration Case I	[3] .80	[3] .95
Steel-tank storage	.98	.98
Present program (including proration)	1.04	1.04
Oil from coal	[4] 1.35	[4] 1.35
Subsidized oil-exploration Case II	[3] 1.56	[2] 1.64

[1] Assumes availability of 5,000,000 b/d for 12 months or 1.825 billion bbl for the year in 1975. Assumes 6,000,000 b/d for 12 months or 2.190 billion bbl for the year 1980.
[2] 105,000 b/d available in 1975; 1,000,000 b/d available in 1980.
[3] 3,500,000 b/d available in 1978; 5,000,000 b/d available in 1981; 6,000,000 b/d available in 1983 at $1.02/bbl for Case I; $1.69/bbl for Case II.
[4] 100,000 b/d available in 1975; 1,000,000 b/d available in 1980.

Exploration subs dy Case I (5,500 000 b/d in 1982)	19,844
Exploration subsidy Case II (5,500,000 b/d in 1982)	33,398
Oil from coal (100,000 b/d in 1974 working up to 1,000,000 b/d in 1980)	1,084

Source: Department of Interior staff report.

A 6-month backup supply for 1971–1980 is calculated to cost only $3,492 billion. This is based on a steadily rising volume of oil, reaching a rate of 5,600,000 b/d in 1975 and 6,000,000 b/d in 1980. The storage would be increased in accordance with rising imports in order to provide the 6-month strategic reserve for use in case of supply disruptions.

To provide even stronger supply insurance, the cost would be about double, according to Interior estimates—$6.983 billion. But that would be relatively cheap when spread out over 10 years for a 12-month emergency backup and with delivery rates at 8,000,000 b/d in 1975 and 6,000,000 b/d in 1980.

This is just slightly over half the cost for comparable steel storage.

And it compares very favorably with the other extreme computed by Interior economists—a reserve created by exploration subsidies. To provide a supply of 5,500,000 b/d in 1982, they say the Government would have to give wildcatters an estimated $33.398 billion in subsidies over next 10 years.

The papers studied the program mix to equate the marginal cost of import controls and alternative programs.

The per-barrel cost for the present program is figured as the average cost in excess of $2/bbl for the amount of domestic production attributed to import controls. Analysts assumed $2/bbl as the delivered cost of foreign oil in the U.S.

The marginal cost of extra production varies from zero at U.S. points distant from tidewater to $1.30/bbl on the East Coast.

Assuming inefficiencies due to proration no longer exist by 1975, Interior places the total cost of controls to the nation in 1975 at $1.02 billion. This is for 1.51 billion bbl of additional domestic production brought forth under the umbrella of controls.

The cost to the nation is the "resource" cost—67¢/bbl in resources consumed to attain the added quantity of domestic oil. By 1980, the resource cost would be $1.4 billion, or 68¢/bbl for 2.07 billion bbl of added domestic oil produced.

This estimated cost to the nation excludes the transfer payments from domestic consumers to producers and refiners.

Salt-dome storage. Most of the cost of the salt-dome storage alternative is imported crude oil—25¢ or two thirds of the 39¢/bbl cost.

This reflects the cost of $2/bbl foreign crude amortized over 25 years at a 12% return.

Cost of reaching storage capacity and maintenance of an oil-recovery system, each with capacity of 5.25 million bbl, is 13¢/bbl. This assumes 5% of the stored oil could not be recovered.

Cost of operation, with facilities on standby, is set at only 1¢/bbl/year.

Salt-dome storage is held to be feasible, based on development of unused sites on the Gulf Coast. A survey by the Bureau of Mines in 1966 listed 130 salt domes, of which 24 had been developed for LP-gas storage. Most of the undeveloped domes are said to be large enough to accommodate two 5.25-million-bbl units.

They are located near existing transportation facilities and so are not considered to require major changes in the supply distribution system. Under this concept, Colonial Pipeline's products system, for instance, would be used for crude shipments from Houston to the New York area.

Oil from shale. Interior believes by 1980 the nation could have a shale-oil industry capable of producing 1,000,000-b/d.

The Government would have to build three prototype plants to demonstrate to private industry the viability of present technology, according to this study. These units would cost $415,200,000, and create 105,000 b/d of productive capacity.

By 1974, Interior assumes private industry would start investing its own money in plants, reaching capacity of 900,000 b/d by 1980.

A government subsidy of 98¢/bbl would be needed for plants using present technology, according to the study, compared with a 12¢ subsidy for improved technology.

If improved technology is incorporated in plants coming on stream in 1978 (Case II in the study), the cost to the Government in 1980 would be 51¢/bbl. If improved technology is not introduced until 1979 (Case I), the cost to Government in 1980 is figured at 68¢/bbl.

Steel tank storage. Two-thirds of the cost of emergency oil in steel tanks is steel—66¢/bbl.

The carrying costs on 1.1 billion bbl of crude for strategic storage accounts for one-fourth of the unit cost, or 24¢/bbl/year for the $2/bbl foreign crude assumed in the study.

Unit cost of operating the units is 8¢/bbl, or 8% of the total.

Oil from coal. Synthetic oil from this source can be produced for sale, fob plant, with existing technology and credit for by-products, at $3.35/bbl, Interior estimates.

Capital expenditures for a 100,000-b/d plant, the optimum size, is estimated at $400 million, exclusive of mines and refinery facilities. Delivered coal at $3.50/ton is estimated to be 35% of total cost.

Ten plants, providing 1,000,000 b/d of capacity, together with 30 large coal mines to supply them, would take $4½ billion to $5 billion in capital outlays, the study says.

Exploration subsidies. In computing this alternative, Interior used a finding-cost estimate of 93.4¢/bbl.

This was developed by Foster Associates, Inc., Washington, D.C., research firm, in a study for the Bureau of Land Management in 1967.

The figure includes all preliminary costs (scouting, geological and geophysical expenses, rental fees, and drilling), but not lease acquisition.

To develop 1,000,000 b/d of capacity for at least 1 year, Interior estimated that 3.650 billion bbl of reserves must be found (10 bbl of producible reserves for each bbl of first-year capacity, for a reserves-production ratio of 10:1. For 500,000 b/d of capacity, therefore, 1.825 billion bbl of reserves would have to be discovered.

Case I was calculated on the basis of fully supporting an existing industry one-half the size of the industry in recent years which found reserves at the rate of 3.3 billion bbl/year for the past 9 years.

Interior assumed that 2 years after the start of exploration (the lag between discovery and full development), and each year thereafter, the industry could add 500,000 b/d of reserves to excess capacity.

Costs are computed at 80¢/bbl for 3,500,000 b/d, and 95¢/bbl subsidy for 5,000,000 b/d in Case I. In Case II, the costs are placed at $1.56/bbl at 3,500,000 b/d and $1.64/bbl at 5,000,000 b/d, with a uniform finding rate of 1.825 billion bbl/year of producible reserves.

Other alternatives. Interior studied the costs of a strategic reserve through shut-in production, elimination of leasing charges, and elimination of tax advantages for foreign exploration and production.

The results showed none of these was a feasible alternative, Interior said. For instance, if federal leases were given away, the savings (from 12 to 27¢/bbl, or 10 to 23% of finding costs) wouldn't be enough to sitmulate significant new reserves.

Consumer costs issue. The staff papers, developed by the Bureau of Mines Division of Mineral Economics, estimate the costs to consumers of import controls to be much greater than earlier figures given by the department.

The bureau economists projected costs to consumers of more than $7 billion by the year 1975 and more than $8 billion in 1980. Interior earlier placed the figures at $2.2 billion to $3.5 billion.

Interior's original filing assumed integrated companies would set the pricing pace under unrestricted oil imports. The latest analysis is based on the premise that product prices would be determined by independent refiners, who presumably would pass on full cost savings in raw material to the consumer.

John Ricca, deputy director of the Office of Oil and Gas, wrote the imports task force that the department has been unable to decide which analysis is correct. The second was passed along for the information of the task force.

But, Ricca added, consumer costs may not be the right basis for determining oil import revisions.

"The crucial measure," he said, "is the alternative resource costs to the U.S." This approach suggests a combination of liberalized controls with a strategic reserve in salt domes, according to the Bureau of Mines studies.

JERSEY SETS $1.50/BBL COST ON VENEZUELAN CRUDE

Average industry costs for Venezuelan crude, fob deepwater, are $1.50/bbl, excluding rate of return on investment.

This estimate was given to the Cabinet Task Force on Oil Import Controls by Standard Oil Co. (N.J.) officials in a conference held at the request of the task force staff.

Jersey officials, headed by Executive Vice-President E. G. Collado, listed Canadian oil costs at $1.27/bbl, including lease and bonus payments and royalty but excluding tax payments to the Canadian Government.

The Venezuelan figure included operating costs of 34¢, depreciation 20¢, and taxes 96¢. They excluded return, currently estimated at 20% of fixed assets on a revalued basis. The return would approach 30% without revaluation, according to a memorandum on the discussion filed by the task force staff.

The Canadian average reflects a wide spectrum of costs, according to Jersey Standard. They range from perhaps 75¢/bbl to well over $2/bbl.

Lease and bonus payments are estimated at about 15¢/bbl and royalty 27¢/bbl.

The company doesn't believe that elimination or reduction of lease and bonus payments for future acreage and any benefits from ending prorationing would offset losses to producers if U.S. import controls were removed. These figures are behind Jersey's forecast of reduced Canadian crude producibility if U.S. import controls are lifted as a result of the present review being undertaken by the White House.

Existing reserves in Venezuela do not permit any dramatic increase in producing capacity, according to the memorandum. South Lake Maracaibo and Gulf of Venezuela areas might add new production of 400,000 to 800,000 b/d, Jersey believes.

But any sustained growth of Venezuelan production will depend on exploration of new acreage and development of new reserves, the company states.

[From the Oil & Gas Journal, Oct. 6, 1969]

OILMEN SHOULD GET READY FOR BIG BATTLE ON IMPORTS

All signs in Washington indicate that import controls on foreign crude are in deep trouble.

The cabinet task force now surveying the issue seems bent on proposing radical changes—or perhaps even outright abolition of all controls.

The report of the task force probably will reach the President by late autumn. So oil industry leaders thus have at least the next 2 months to do their homework for a possible showdown.

The turn of events is really not surprising.

In the first place, the staff and leadership in the task force can hardly be called friendly to oil. The flavor of theoretical economics permeates the organization. Some of the academicians, judged by their writings, can be termed prejudiced against petroleum. Lack of expertise on oil matters is a striking shortcoming.

But even worse, the task force has approached its work from a perverse point of view. It has hunted out ways to relax controls. It has railed at high domestic oil prices and heavy costs to the nation.

It thus will be a miracle if the President is handed an accurate, balanced report with equitable and workable recommendations on which to base the nation's oil policy.

This is little short of tragic because a firm—but fair—policy is badly needed on imports. During the last administration, a series of special exceptions made a political football out of the control program. Many oilmen welcomed the move by President Nixon to take over import policy from Interior and to order a sweeping study of the entire issue.

These still believe a review of import controls is needed prior to making administrative changes. Their mistake was failure to insist that knowledgeable oil experts be included on the study group.

WHAT to do now?

The industry has no choice. It must fight all out at the presidential level if necessary to save the basic concept of controlling foreign imports. The mechanics of control may be altered or the level of control may be changed. But all controls can't be swept away; for if the gate is thrown open wide to foreign oil, the domestic industry will be turned into a shambles.

In the event of an unfavorable task force report, oil leaders must ask for the right to file answers. This will call for instant facts which should be collected starting right away on all possible situations.

Radical changes also should be anticipated and countered with prepared proposals favored by oilmen. Changes are coming—make no mistake. The oil industry must be certain that the changes do not wreck controls but do produce a policy that is fair to all elements of the public and industry.

This is certainly no time to throw this nation on the mercy of foreign oil. The fields of the Middle East, Africa or even some parts of South America were never more insecure from threats of war, revolution, guerrilla strikes, or political coups springing from religious, racial, and nationalistic hatreds.

The clinching argument for retaining import controls actually may be the news from Libya and elsewhere at the time the task force reports.

It might be noted that those with "lack of expertise" who have participated and filed formal statements with the Oil Task Force are—

The Department of Defense (according to this column, it evidently has no knowledge of national security) which stated that all Western Hemisphere sources of oil were secure and oil imports should be allowed freely from those areas; and also stated "our national security dictates that we have in existence dependable, capable and willing overseas sources to satisfy petroleum needs on a global basis." Defense also pointed out that more than 90% of the oil supplies for Vietnam have come from the Middle East, which the major oil companies claim is an insecure source.

The Department of Justice (apparently they have no knowledge of competitive forces in our economy) which stated "The present import control system imposes serious costs on the economy. . . . These costs would not appear to be necessary to the attainment of any reasonable national security goal—The import controls themselves do nothing to preserve this country's domestic oil reserves. . . Improvement in competitive conditions by changes in present systems of control, by their elimination would be, in our view, of significant benefit to the nation's interest in low-cost energy supplies, effectively produced and distributed both in normal and emergency periods."

The Department of Interior (which used to be a captive of the oil industry program, but much to the suprise of oil men, has been producing a good deal of factual information lately), estimated that the oil industry program will cost the American people more than $7 billion by 1975 and more, than $8 billion by 1980 (see attached article from Oil and Gas Journal, 9–29–69).

[From the Oil Daily, Oct. 6, 1969]

THREE DEVELOPMENTS ACT AS CATALYSTS—OIL EXECS' MESSAGE ON IMPORTS SEEPS INTO WHITE HOUSE

(By Jim Collins)

WASHINGTON.—The deep and growing concern by oil executives that the Nixon administration has appeared to be heading for significant changes in oil import controls—perhaps even abandonment of those controls as now designed—has started to have some effect at the White House, the Oil Daily has learned.

Just what brought the situation to a head is not known for sure, but three developments in recent weeks may have acted as the trigger at the White House.

First, the task force staff came up with a wild estimate that North Slope reserves could be developed at a cost of 36 cents a barrel (not counting lease bonuses) and could be laid down on the East Coast of the U.S. for 96 cents a barrel.

Both figures are outside the realm of reality—far outside.

Evidence has continued to mount that costs will be much higher than 36 cents a barrel and that full development and transportation of the Prudhoe Bay oil will call for massive doses of capital investment.

The second major development which originated within the task force staff was to make the Charles River Associates study—done for the Office of Science and Technology in the White House—a "key" document of challenge to the industry.

The CRA study, in effect, found that oil import controls are too costly, unnecessary, and that national security supplies of oil could be stockpiled at lower costs, with a resultant sharp drop in domestic crude and product prices.

Oil companies faithfully commented, in detail, on the CRA report, as requested by the task force staff, and their estimates, unanimously, were that oil stockpiling would be extremely expensive, not in accordance with the need to maintain a viable domestic industry, with spare capacity, from well head to consumer, and would play havoc with the industry's economics, and the result would be less security for the nation that import restraints now provide.

Another recent development has been the clear conflict in estimates of oil import control costs, developed separately within the Interior Department by the Office of Oil and Gas and the Bureau of Mines.

The OOG figures, for 1975 and 1980, came to between $2 and $3.5 billion, respectively, while the Bureau's estimates added up to $7 to $8 billion, for those two years.

The Bureau's studies, contained in nine "monographs," found much lower costs for stockpiling oil in salt dome caverns along the Gulf Coast, to meet national security needs, and examined other possibly attractive developments of synthetic fuels, from coal and oil share, as safeguards against oil shortages.

All of these studies lent credence to the attacks made on oil import controls and state production controls before the Senate Anti-Trust Subcommittee earlier this year, and estimates by the subcommittee staff that import controls were "too costly" and that other approaches to national oil security were called for, including possible subsidies for drilling, synthetic fuel development and stockpiling.

Thus, faced with the clear probability that Congress will this year, or early next year, significantly trim current oil and gas tax incentives, oil men have reacted with disbelief, at first, then with the growing realization that oil import restraints might be junked.

It is known that in recent days, Phillip Areeda, staff director for the task force, has been at the White House for consultations on the oil import study.

Meanwhile, a meeting of the cabinet committee, scheduled for this week, has now been postponed for about two weeks.

A member of the staff insists that the meeting will be held "in the near future," and that a report will still reach the President about Thanksgiving but there was not the same note of confidence in the tone of his voice that there was earlier.

The man who will make the final decision is President Nixon. Will he be led down the primrose path by the cabinet members, relying on the Areeda staff, and believe that adequate supplies of oil and gas can really be developed to meet not only soaring peacetime requirements but emergency requirements—if both tax incentives and import curbs are drastically shaped?

The President, it is noted, has agreed to accept a cut to 20 percent in the depletion provision, and Treasury has made other suggestions for revisions in oil-gas tax rules, domestic and foreign, that would hit the industry with $600 million more a year in U.S. income taxes.

The key question now has become: Will the President accept drastic changes in present national security oil policies—notably import controls—under the pressure of consuming-area Congressmen and Senators, particularly those in New England?

There is every indication now that the President has been made fully aware of the potential disaster facing the U.S. oil industry, if both tax incentives and import curbs are drastically revised at this time.

President Nixon has shown the ability to analyze differing points of view within his cadre of advisors on many issues, and has reached incisive decisions of a "moderate" political bent.

But, there are some doubts about his understanding of what makes the oil industry tick—in view of his capitulation to the Congressional drive to reduce the depletion allowance for oil and gas, without even mild resistance, despite his pledges on this issue last fall and earlier this year.

Thus, until the final die is cast on the issue, no one can be sure whether President Nixon will recognize the imperative need to maintain curbs on the inflow of cheaper foreign oil. But, he apparently has become more interested in the issue, in recent days.

[From the Oil & Gas Journal, Oct. 13, 1969]

OIL IMPORTS REVIEW ENTERS DECISIVE PERIOD THIS MONTH

(By Gene Kinney)

This is a big week in the policy review being conducted by the Cabinet Task Force on Oil Import Controls.

The President's designated cabinet officers are scheduled to get together at a hideaway for 2 days to begin grappling with issues raised in the review. Unless the study takes a new turn, the nation is in danger of abandoning the national-security concept it has embraced for 10 years. That is, it may get away from import controls as the means of avoiding the risk inherent in undue dependence on foreign supplies.

This is the clear direction of the review to date. It is reflected in "fact papers" developed by the academic economists on the task force staff. The one-dimensional review appears to be focused narrowly on the calculated cost to consumers of limiting imports from cheaper foreign sources, and ways of cutting that cost.

The staff, as evidence in the 30-odd papers circulated privately among federal agencies for comment last week, is leaning toward an alternative that will theoretically save consumers money—and will lift the lid on controls. The inclination is not yet ceased in the form of a recommendation. But it is foreordained in "factual conclusions" reached in the staff papers.

The staff still talks of preserving national security, which is the legal basis for limiting imports. But its arithmetic leads to a solution other than import controls—a huge and expensive stockpile of foreign oil stored here. It is made to appear cheap by amortizing the investment over 25 years. In calculating the savings, it ignores the loss that would come from devastation of the economies of key oil states and the damage to natural-gas consumers.

And storage offers a supply supplement only for a limited period—up to a year—the assumed maximum for any supply disruption. But where would the security be after that? Domestic capacity, greatly reduced by a break in prices sought by the task force staff, will not be there to take up the slack. There is a great difference between a stopgap supplement from storage and productive capacity for the future developed under controls.

Petroleum specialists in Defense, Interior, and State departments shudder at the thought of becoming dependent on insecure Middle East oil for a significant portion of U.S. supply. Whether their concern will be reflected at the cabinet level and translated into the report to the President is something else again.

The fear is that the task-force recommendation to the President will focus on alleged consumer savings rather than the more-relevant and much-lower figure of cost to the nation. Unless the White House itself prevents this, the President's options will be greatly limited. He will find himself trapped by the very politicans whose pressure helped to bring about the review in the first place.

[From the Oil Daily, Oct. 14, 1969]

IMPORTS STAFF PAPERS WILL REMAIN UNDER WRAPS

WASHINGTON.—Roland Homet, counsel for the presidential oil imports task force, declined at weekend to make public any of the three dozen, or more, staff papers drawn up and distributed to federal agencies for their comment.

Homet said that in some cases, the language in the "preliminary" papers distributed might have been overdrawn deliberately in order to stimulate comments from the agencies.

In other cases, he said, the subjects dealt with were still in a "grey area," and that additional clarifications would be required.

He thought it would be "unfortunate" if the papers should leak out, that it would only further complicate the work of the Cabinet committee.

Homet also declined to say when the next meeting of the Cabinet members is scheduled or where they will meet. He did say some reaction comments to the staff papers had been received, but he declined to say which agencies have filed, or on what subjects.

There was some indication that the work of the Cabinet committee may have slowed down, and that the original deadline for a report to the President might not be met.

Homet said that the Cabinet members expect to file their report with President Nixon "by the end of the year." The target date always mentioned, up until now, has been Thanksgiving, late in November. Homet said that every effort will still be made to file the report by that time.

"We are under some constraints," he commented, "to file a report with the President by the target date that was set last spring—about the "end of November."

SUPPORT FOR LINKING RESERVE CREATION AND DEVELOPMENT ASSISTANCE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 30 minutes.

Mr. REUSS. Mr. Speaker, in August the Subcommittee on International Exchange and Payments of the Joint Economic Committee issued a report urging serious study of the possibilities for using international reserve creation, in the form of SDR's, to finance increased economic development assistance.

The idea of linking reserve creation and development assistance was discussed extensively at the recently concluded IMF-World Bank annual meetings. Governors representing a number of developing countries voiced approval of a "link" and urged that study or other action toward its implementation be pursued immediately.

Representatives of only three industrial nations expressed an opinion toward linking reserve creation and development assistance. Italy favored such a mechanism, the Netherlands was opposed, and the United Kingdom's spokesman expressed hope that the distribution of SDR's would help create conditions permitting an increase in development aid. Both Mr. Schweitzer, Managing Director of the Fund, and Mr. McNamara, President of the World Bank, voiced concluding sentiments similar to the United Kingdom's position.

An international group of monetary experts convened last month by UNCTAD agreed that a linkage mechanism should be implemented and favored whatever variant would accomplish this objective most promptly. The Pearson Commission recently submitted its com-

prehensive review of aid policies, entitled "Partners in Development to the World Bank." This report also referred approvingly to the use of SDR creation as a means for increasing financial assistance to poor nations.

I submit for the RECORD relevant excerpts from the speeches of officials and Governors given at the Fund-Bank meetings; from the UNCTAD monetary experts' summary of their conclusions; from the Pearson report; and from my October 16, 1969, talk before the Lague of Women Voters Conference at Wingspread, Racine, Wis.

SPECIAL DRAWING RIGHTS AND DEVELOPMENT ASSISTANCE, 1969

EXTRACTS FROM ANNUAL MEETING SPEECHES

IMF: Mr. Schweitzer

For a number of years past, progress in the liberalization of trade and payments and in the area of development assistance, which began so promisingly in the earlier postwar years, has been checked, in part by balance of payments constraints. With the resumption of reserve growth on a controlled basis, any such collective payments constraint should disappear. I believe that it would be appropriate if this were to be recognized in the actions of the leading trading countries. I should like to see a decisive check to recent tendencies toward backsliding in trade and payments liberalization. I should like to see a new forward thrust in the volume and quality of development assistance.

The Fund will continue to keep these matters under close review in its consultations with members. We will also be prepared to reinforce our collaboration with the international institutions which have special responsibilities in the field of trade and aid. The removal of remaining impediments in both these areas will be a major task of the early 1970's.

We must therefore insure that the new facilities which we have constructed are used for their underlying purpose. While the process of renovation and adaptation in the world monetary mechanism is not complete—or is ever likely to be—the framework now exists in which the pursuit of sound policies for internal and external balance can bring a period of calm and stability to financial markets.

Afghanistan: Mohammed Enwer Ziyaie, Minister of Finance and Governor of the Bank

The close relationship between problems of economic development and monetary problems has been demonstrated again during the past year. As noted earlier, the growing cost of borrowing on the world's capital markets, where interest charges have reached unprecedented levels, is a major concern of developing nations. At the same time, world monetary developments have given increased cause for concern. The need for strengthening the present monetary system is apparent. Therefore, Afghanistan welcomes the approval of the special drawing rights scheme. We feel that until now, however, the opportunities to use the provisions of the scheme to generate development assistance have not been fully exploited and urge efforts to assure that the twin goals of liquidity and development be maximized. We are equally concerned about the decision to adhere rigidly to the Fund quotas in establishing the formula for drawing rights.

Algeria: Cherif Belkacem; Minister of State in charge of Finance and Planning and Governor of the Bank

I did not, of course, request last year that these special drawing rights should be used for development financing, since it might then be alleged that they had been diverted from their purpose.

But the proposal I made, which I reiterate, is that the national currency counterpart of the allocation of special drawing rights be placed by the receiving countries at the disposal of the Bank and IDA, instead of returning to their national Treasuries. These institutions would thus have some $9,500 million in additional resources at very low cost.

This solution, which accords perfectly with the Fund's statutory provisions on the instruments of international liquidity, calls for no sacrifice on the part of the industrial countries. It affects only their access to their share in the special drawing rights. Furthermore, since the equivalents in their national currency would in principle be utilizable only with their agreement, to finance purchases of goods and services from them, they would automatically receive the equivalent value in additional economic activity which, I think I have demonstrated briefly but clearly today, exerts a vigorous expansion effect and, in the view of one Minister of Finance, engenders additional tax receipts and new savings.

These considerations seem to me to be decisive and to override objections that the industrial countries would be able to make to my proposal.

Ceylon: U. B. Wanninayake, Minister of Finance and Governor of the Bank and Fund

I have, at each of these Annual Meetings, which I have attended since 1965, persisted in referring to the desirability of establishing a link between the creation of new reserve assets and the flow of resources for development. I am glad, indeed, that there now appears to be growing support for this proposal. It was clear to me that the volume and timing of new reserve creations should be determined strictly by global liquidity needs. The SDR scheme insures that this is so, but, once additional liquidity has been created, it is appropriate to ask whether the relief this would provide to the advanced countries should not be made an occasion for augmenting the much-needed flow of resources for development. The arguments in favor of this have been made elsewhere and I will not go over them again. I am aware that the present SDR scheme rules out the possibility of an "organic" link between liquidity creation and resources for development, but numerous methods could be devised by which the recipients of SDR's among the advanced countries could make a fair proportion of the additional resources accruing to them available for development financing. I am aware that this question has recently been studied in detail in other forums, notably by UNCTAD. I would wish to commend these ideas for further consideration and make the specific proposal that the Fund, possibly in collaboration with the Bank, make a complete study of this issue, and I do hope that concrete and practicable proposals would emerge out of this.

Chile: Carlos Massad, President of the Banco Central de Chile, and Governor of the Bank and Fund

Speaking also for Argentina, Bolivia, Brazil, Colombia, Costa Rica, and Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, the Philippines, Uruguay, and Venezuela.

The decision to activiate the mechanism with effect from January 1, 1970 should help to brighten the future for the developing countries, which, because of insufficient international liquidity, have recently had to put up with trade requisitions and with the twin disadvantages of scarcity and high cost of capital to finance their development. It was a group of industrialized countries that originally decided on the amount and distribution over time of the new liquidity, and its scarcity can henceforth no longer be an argument for limiting transfers of real resources to the developing countries and for imposing trade restrictions.

In view of the prospective first distribution of special drawing rights, which are assets received on a nonrepayment basis, it is timely to recall once again the need to increase contributions on concessionary terms, to the international financing agencies. Voices have raised in certain countries, and in agencies such as UNCTAD and CECLA, in favor of the idea of linking the creation of new liquidity, directly or indirectly, with the transfer of real resources for development. We support this idea, inasmuch as it implies an increase in untied loans and transfers and a long-term decision as to their amounts.

China: Kuo-Hwa Yu, Governor of the Central Bank of China and Governor of the Fund

If the institution of the SDR's helps in making more liquidity available to world trade as a whole, which we feel sure it would, and if it helps the key currency countries refrain from resorting to the measures destructive to world trade in a time of temporary balance of payment deficits, which we hope it would, it would seem logical to conclude that the creation of the new facility will prove to be beneficial to developing and developed countries alike.

Colombia: Abdon Espinosa Valderrama, Minister of Finance and Public Credit, Governor of the Bank

When the special drawing rights come into effect it will no longer be possible to point to a scarcity of international liquidity as the motive for decreasing the amount of loans or for failing to increase them. This applies even more to advocating interest rates so high that they undoubtedly prejudice development efforts.

Ethiopia: Menasse Lemma, Governor of the National Bank of Ethiopia and Governor of the Fund

I believe that the creation of special drawing rights is a step in the right direction and we are to approve it at this Meeting. There is no need to repeat the arguments for or against SDR's or to consider whether this scheme is a bonus for deficit countries. However, even at this late hour I would like to mention that a more equitable basis for the allocation of SDR's, taking into account the needs of the development countries, should be found. Should this not prove feasible at this stage, I would support the idea that an adequate percentage of the created SDR's be channeled in some way, perhaps through IDA, for development endeavors. If we fail in this objective, serious dangers and real perils that may hamper the efforts of the second Development Decade lie ahead. Economic historians may judge this Meeting severely should SDR's become identified in the mind of the people as a scheme devised for the benefit of the rich countries.

The Gambia: S. M. Dibba, Minister of Finance, Trade and Development, and Governor of the Bank and Fund

It is our hope that the increase in international liquidity through special drawing rights, while strengthening the international monetary system, will at the same time insure a greater transfer of resources to the developing countries.

Gabon: Augustin Boumah, Minister of Finance and Budget, and Governor of the Fund

(Speaking also for Cameroon, CAR, Congo (B) and Chad)

I have referred already to the question of special drawing rights. Permit me to return to it for a few moments, by way of transition, to affirm that our countries will par-

ticipate in this system, and to suggest that it would now be desirable to define the practical means by which a link could be established between the new reserve units and the expansion of aid to the developing countries. In this, we know that we can count on the enlightened assistance of the Managing Director of the Fund.

Ghana: Jones Ofori-Atta, Parliamentary Secretary, Ministry of Finance and Economic Planning, and Governor of the Bank

May I now turn to the question of the special drawing rights. By the decision of both the developed and developing countries to activate the special drawing rights, the members of the Fund have agreed to create a special line of credit which is an addition to international liquidity. But the main beneficiaries of this new reserve asset are the developed countries—the members of the big league. We had hoped that this would offer an opportunity to step up the volume of aid to the developing countries. What we find, however, is that the developed countries are refusing to consider linking SDR's with aid transfers to the developing world.

In spite of the legal limitations on the Fund as an institution, we would urge the Management to keep an open mind on the issue because we are convinced that some linkage arrangement is both justified and possible.

Greece: Emmanuel Fthenakis, Alternate Minister of Economic Coordination and Governor of the Bank

The question arises, however, as to whether in allocating the SDR's, special provision should be made for the developing countries, whose shortages of liquidity become acute in the conditions prevailing now in the international capital and money markets. The allocation of SDR's solely on the basis of the member's quotas in the Fund places the developing countries at a disadvantage. One wonders whether some method of allocation should not be devised in order to offset, to a certain degree, this disadvantage. At any rate, Greece wholeheartedly supported the decision to allocate special drawing rights and we now support the Managing Director's proposal for activation.

Guyana: P. A. Reid, Minister of Finance and Governor of the Bank

Guyana cannot possibly find, in its own resources alone, all the capital that is required to sustain a satisfactory rate of economic growth. It must therefore look abroad for a large part of the capital it needs for economic growth.

But my country is only one example. By far the greater number of the countries represented at this Meeting are in the same situation.

For these reasons Guyana supports the scheme of special drawing rights. The world economy must not be frustrated (by what is, after all, a mere liquidity problem) in its efforts to expand international trade and the flow of capital from developed to the underdeveloped countries. We must realize the world's full productive potential to the mutual advantage of all—both the developed and underdeveloped countries. But I confess to great disappointment that the scheme has not been weighted more toward its development potential.

India: L. K. Jha, Governor of the Reserve Bank of India and Governor of the Fund

Acceptance of the SDR scheme marks the beginning of a new era in internationally managed money. We, in India, have consistently lent our support to deliberate reserve creation as a major step forward in the direction of evolving a more progressive and more rational international monetary system.

Having said this, I cannot but share with my fellow Governors the concern we have felt over some aspects of the matter. All too often there has been a tendency to look at the SDR question as if it was exclusively an affair of the more developed and more advanced nations. A good deal of the discussion and the more crucial negotiations have taken place outside the forum of the Fund where no one from the developing world was present. As a result, the question of a formal link between the creation of international liquidity and development finance has been shelved, even though developing countries which account for over 80 per cent of our membership and at least some of the developed countries support it. We propose that this matter should be considered afresh. Some kind of a link should be forged between the creation of international reserves and the transfer of resources from the rich to the poor, particularly since inadequacy of reserves has in recent years been an important cause of the deterioration of the quality and quantity of aid.

Indonesia: Ali Wardhana, Minister of Finance and Governor of the Bank for Indonesia

We of the developing countries will not directly gain much from the activation of SDR's, tied as they are to our meager quotas. The Board of Governors of the Fund has, by adoption of the Amendment of the Articles of Agreement, rejected the idea of a linkage between SDR's and development needs. For the time being, this matter has to be considered closed. However, some basic inconsistencies will continue to attract the attention of economists and financial people. One may wonder if the distinction between liquidity needed for balance of payments and that needed for development purposes is not rather artificial, at least as far as developing countries are concerned. The balance of payments position of these countries does not as yet reflect the actual needs of their economy so that, in their case, balance of payments and development needs are more indistinguishable than in the case of the developed countries.

Another rather striking feature is that developed countries not in need of extra liquidity are receiving SDR's as well. It is true that their use is dependent on balance of payments needs, but, in ordinary life, an enterprise neither seeks nor obtains extra credit facilities from a bank if it has already ample means at its disposal. Instead of the present system of distribution, conceptually at least, it seems feasible to allocate SDR's only to countries in need of additional liquidity. We have taken a bold step unprecedented in monetary history; let us be open-minded in seeking to perfect it. In this respect, I would like to comment briefly on the idea of a transfer by developed countries of part of their SDR's, either directly or indirectly, to developing countries. Under the present Articles of Agreement this is hardly possible, but, if at any future date such action would be practicable, I hope that the amount transferred will be added to, and not included in, the 1 per cent of GNP urged by the United Nations. After all, the spirit of that recommendation is a transfer of national resources, not of resources created ex nihil.

Israel: David Horowitz, Governor of the Bank of Israel and Governor of the Bank

A blend of my Proposal for access by developing countries to capital markets, with the use of new liquidity reserves for development, the special drawing rights and at least a maintenance of the current volume of grants-in-aid, could revolutionize the present state of affairs.

Israel: Zeev Sharef, Minister of Finance, and Governor of the Fund

I feel that one more reservation should be mentioned. In the contemplated SDR system, no attempt is made to alleviate some of the special difficulties that the developing countries encounter in their foreign exchange reserves position.

We regret that suggestions to link the creation of the new "unearned" purchasing power with the general problems of developing countries have not been followed up. We assert that, after a decision on the creation of additional reserves has been taken—a decision which is based on the needs of international trade—the emphasis in allocation should be less on the existing wealth of individual countries and more on the needs of countries which are beginning their take-off.

Notwithstanding these reservations, however, it is our feeling that the actual implementation of the SDR system is the most important task ahead of us. Therefore we have voted in favor of the resolution as presented by the Managing Director of the Fund. We further hope that, in a few years, when the SDR's have become a permanent and accepted feature of international liquidity arrangements, it will be possible to reconsider the allocation system, and to attempt to achieve a solution that will also take into consideration the special needs of the developing countries.

Italy: Emilio Colombo, Minister of the Treasury and the Budget, and Governor of the Fund

On the subject of the relationship between the industrial and emerging countries, I suggested last year that, following each allocation of SDR's, the major industrial countries should agree to make, in a manner to be agreed upon, a contribution to the IBRD or IDA equivalent to a portion of each country's SDR allocation. This suggestion, which has also been discussed within the Group of Ten, appears to have received a very favorable response from the UNCTAD and has aroused interest in the Bank and its Affiliates. We continue to believe that it is worthwhile to examine the possibility of implementing this proposal. One of its advantages is that without the need to amend the Articles, some mitigation would be introduced of the rigidity of the parameter—the Fund quotas—which has been chosen as the basis for the allocation of SDR's. Balance of payments permitting, we do not exclude a unilateral implementation of this proposal.

Ivory Coast: Konan Bedie, Minister of Economic and Fiscal Affairs and Governor of the Fund

It has been said that the voluntary creation of additional liquidity within the framework of the Fund opens up a new era in the field of monetary cooperation and that it marks the accession of the international community to monetary civilization. There can be no doubt that this assertion would be even more true if the industrialized countries were to agree that a part of their SDR's be earmarked for the development of the third world countries, as have been proposed by Ministers Valery Giscard d'Estaing and Emilio Colombo.

Kenya: Bruce McKenzie, Minister of Agriculture, and Governor of the Bank and Fund

We welcome the creation of the special drawing rights and look forward to their activation, but we regret that it was not found possible to link the SDR's with development finance.

Luxembourg: Pierre Werner, Prime Minister, Minister of Finance, and Governor of the Bank and Fund

The SDR's cannot only act as a lubricant in a soundly developing international trade, but they might indirectly contribute to an improvement in the acutely shrinking capital markets.

Malaysia: Ali Bin Haji Ahmad, Assistant Minister of Finance, and Governor of the Bank

While we hope and expect this inequitable basis of allocating special drawing rights to be changed in the near future, we feel that the effects of this system should also be mitigated in the meantime. One approach that has considerable merit is for the major industrial countries to set aside for purposes of development aid the equivalent of a portion of what they will receive in special drawing rights. This is not a new proposal but one on which Governor Colombo of Italy has called for serious consideration at the last annual meetings.

Nepal: Yadav Prasad Pant, Governor of Nepal Rastra Bank, and Governor of the Fund

I strongly share the views expressed by the Governor of Indonesia to the effect that the balance of payments problems and development needs of developing countries are more indistinguishable than is the case with the developed countries.

I would therefore like to suggest that a part of the SDR's be passed on to the International Development Association to be used exclusively to finance development activities in the developing countries according to their resource needs, or that a separate arrangement be made in order to facilitate the use of an adequate portion of the SDR's to finance the development needs of the developing countries. Since all such countries will use the SDR's for paying for imports from the developed countries, the SDR's would ultimately be available to the developed countries. This increase in international liquidity as a result of the issue of the SDR's can make the maximum contribution to the expansion of international trade, while at the same time making possible an enlargement of aid to the developing countries.

Netherlands: H. J. Whitteveen, Minister of Finance, and Governor of the Bank

Various suggestions have been made to establish a link between reserve creation and development finance, either by way of allocating special drawing rights to the Bank or IDA, or by way of joint action by industrialized nations to pass on part of their share in the special drawing rights to the developing countries, via intermediaries or directly. I see great objections to such suggestions. The function of international reserves is to be available in case of need for the financing of temporary maladjustments in the balances of payments of their holders and recipients, not to increase the flow of capital for development assistance which involves a long-term transfer of real economic resources that should be financed out of genuine savings. Otherwise it could become a source of inflation. Therefore, it might bring the whole action of reserve creation into jeopardy if part of the newly created reserves were to be used for whatever good purposes one might choose, but which are alien to their true function. Using special drawing rights to create the illusion of avoiding the burden of the real sacrifice involved in development assistance may be an alluring proposition but I have little doubt that this would mean rendering a very poor service indeed to the whole monetary system generally and the position of special drawing rights in that system in particular. I am afraid that the introduction of this device would degrade the new reserve asset, which—in my conception—should be as good as gold and reserve currency holdings.

Pakistan: Nawab Mozaffar Ali Khan Qizilbash, Minister of Finance and Governor of the Bank

The developing countries had in the past urged for a specific link between SDR's and development finance. However, even though the developed countries have not agreed to a formal link, they can help enlarge the availability of development finance on better terms by making available to the developing countries a certain percentage of SDR's allocated to them.

Paraguay: Cesar Barrientos, Minister of Finance, and Governor of the Fund

Unquestionably, the special drawing rights, by supplementing existing reserve assets in gold and foreign currencies, will constantly guarantee an adequate level of international monetary reserves and, on being transformed into backing for international liquidity, will undoubtedly constitute, directly or indirectly, a most important aid for developing countries.

Peru: Francisco Morales Bermudez C., Minister of Economy and Finance, and Governor of the Bank

It would also be desirable to proceed without more ado to the activation of the credit system based on the special drawing rights (SDR's), which has been ratified by the majority of the member countries, including Peru. Rapid activation of this new mechanism is sure to be of particular importance for the developing countries, which are always the most seriously affected by the ups and downs of the international cycle and the lack of liquidity of the system.

Somalia: Sufi Omar Mohamed, Minister of Finance and Governor of the Bank

Finally, I am pleased to note that Governor Colombo of Italy has this year again raised the important subject of the interdependence of industrial and developing countries. His suggestion that, when SDR's are allocated, each of the industrial countries should agree in a concerted formula, contribute to the Bank or IDA a portion of its SDR allocation, is of significant importance to the financing of these development institutions. I hope that other industrial countries will endorse this proposal of Italy's; and that those countries whose balance of payments position permit may take the lead in implementing this suggestion by the first allocation period of the SDR's.

Sudan: Mohammed El Mekkawi Mustafa, Minister of Planning, and Governor of the Bank

Yet it is disheartening to note that the share of the developing countries is going to be as meager as their rate of growth, which will aggravate the social and economic disparity between the rich and poor in the world community.

It is therefore earnestly hoped that some more equitable distribution will be found to favor the less-developed countries. It is further hoped that the developed countries, who will receive the major share of the new facility, will agree to establish a link between the creation of the SDR's and development financing. It is not asking too much to say that part of the additional resources created by the SDR facility should be directed toward development financing in the underdeveloped countries in order to offset the disappointing results of the United Nations Development Decade.

Syrian Arab Republic: Adnan Farra, Governor of the Central Bank of Syria, and Governor of the Fund

We regret, however, that the Amendment precluded the establishment of an organic link between the creation of SDR's and the provision of development finance to developing countries. It clearly implies that institutions that provide development assistance are debarred from engaging in operations and transactions involving SDR's. We feel, however, that the present Articles of Agreement of the Fund do not rule out two alternative versions of a link. The first version which was mentioned in a slightly different way by Minister Colombo of Italy during last year's Annual Meeting is that acts creating SDR's should be accompanied by voluntary contributions to multilateral institutions engaged in development finance. These contributions should be made by the developed countries from their reserves and their size would be a uniform proportion of the share of each in the creation of special drawing rights. The second version, which is mentioned in a just-published report by an UNCTAD Expert Group on International Monetary Issues, is that developed countries should make contributions in their national currencies to IDA in a uniform proportion to their annual allocations of SDR's.

My delegation, therefore, urges the developed countries who are members of the Fund and who are the main beneficiaries from the creation of SDR's to consider the introduction of such a link at an early date after the activation of this new reserve asset. This would render the distribution of benefits from the activation of SDR's fairly equitable.

We hope, however, that the imminent allocation of SDR's and therefore the expected increase in international reserves would lessen the balance of payments constraint and bring about a genuine move toward achieving the 1 per cent target and improving the overall terms of development assistance.

Tanzania: A. H. Jamal, Minister for Finance, and Governor of the Fund

I regret that the opportunity has been missed to create a link between SDR's and the development needs of the world. Contrary to the belief expressed by the distinguished Governors of an advanced country, I believe that such a decision would have been less inflationary in its effect than the possible effects of the present decision.

Trinidad and Tobago: Francis C. Prevatt, Minister of State (Finance), and Governor of the Bank and Fund

The reason given by developed countries for their restrictive measures is their balance of payments position. We understand that the special drawing rights facility is primarily intended to relieve balance of payments pressures. Now that we have agreed to activate this facility, we look forward to the expeditious removal of these restrictive policies, especially as such measures, one adopted, tend to perpetuate themselves.

There is one feature of the special drawing rights facility to which I must refer. It has been very disappointing to developing countries that the developed countries could not establish a link between the creation of special drawing rights and development finance. It is unfortunate that while the developed countries were able to agree on the creation of a facility which will benefit them most, they could not establish a link to development finance which would be to the benefit of developing countries. However, we have not lost hope, as we acknowledge with gratitude the initiative of Italy in their proposal to allocate unilaterally the foreign exchange equivalent of a portion of their special drawing rights to the International Development Association or for investment in World Bank bonds. We hope that the consciences of the developed countries will be so moved by this example that the question of a link will obtain immediate study, and that a satisfactory solution will be found in the very near future.

United Kingdom: Roy Jenkins, Chancellor of the Exchequer and Governor of the Fund

Third, a word about the relationship of special drawing rights with development assistance. There has been disappointment in many developing countries that the SDR scheme as it has emerged does not provide for any formal link with aid. I do not wish to reopen this matter today, but although no formal link has been established, I am hopeful that the contribution of the SDR scheme to the world's liquid resources may help to create more favorable conditions for the growth of development aid.

Upper Volta: Tiemoko Marc Garango, Minister of Finance and Commerce, and Governor of the Fund

Speaking also for Ivory Coast, Dahomey, Mauritania, Niger, Senegal and Togo.

The member countries of the West African Monetary Union feel that this new addition to international liquidity, most of which will be allocated to industrialized countries, should facilitate the growth of world trade from which all developing countries would benefit. We hope that, through the special drawing rights, a supplementary solution will be found for financing balance of payments deficits, thus permitting the developed countries to contribute more to the financing of development aid.

We hope that it will be possible for the industrialized countries to consider opportunely the creation of an organic or other link between special drawing rights and aid to the third world. In this connection, we compliment and thank the Italian Government for its generous initiative, and we also welcome the interest shown in this problem by the Subcommittee on International Exchange and Payments of the Joint Economic Committee of the U.S. Congress. It is with the prospect of thus seeing a rise in the standard of living of all member countries, a fundamental objective of the International Monetary Fund, that the member countries of the West African Monetary Union are counting on taking the measures necessary to participate in the first allocation of special drawing rights.

Vietnam: Vu Quoc Thuc, Minister of State in Charge of Reconstruction and Development, and Governor of the Fund

Because of the availability of the new liquidity resulting from the implementation of SDR's, we also hope that more international resources will be available for development assistance. In this context, it may be desirable for the World Bank to undertake new measures to increase equity aid to developing nations, in order to compensate for the relative gain by the advanced countries as a result of the execution of the SDR's.

Yugoslavia: Janko Smole, Federal Secretary for Finances, and Governor of the Bank

Secondly, serious proposals have been received from various quarters to relate the special drawing rights to the financing of development. Whether this is done through a formal institutional link or through more informal arrangements is probably not decisive: what is decisive is that the world community cannot afford to miss this opportunity to increase the flow of resources for development, which we all agree is badly needed.

Zambia: E. H. K. Mudena, Minister for Development and Finance, and Governor of the Bank and Fund

Even at this stage, however, shades of differences of opinion might persist, as regards, say, the amount of special drawings rights to be created, or the length of the basic period, or the linking of special drawing rights with aid to developing countries. But I do not regard these as important. What is important is that a new instrument to meet the shortage of international liquidity has at last been forged and this instrument could, if considered desirable and in the light of experience, be reshaped according to the needs of the situation.

Looking at the special drawing rights from the point of view of the developing countries, to the extent that the special drawing rights promote international trade, developing countries could benefit. However, I would urge that special consideration needs to be given continuously to the problem of how the creation of new liquidity in the form of special drawing rights could be linked with the needs of the developing countries.

IMF: Mr. Schweitzer—Concluding remarks

Many Governors have expressed the hope that the increased reserve ease resulting from the allocation of special drawing rights should lead to an expansion of development aid. I share this view. I believe, as I said on Monday, that conditions should now be favorable for a major improvement in the volume and quality of development aid and for a decisive check to regressive tendencies in trade and payments liberalization.

IBRD: Mr. McNamara—Concluding remarks

I recognize there is a division of opinion among the Governors as to whether there should be a formal link between the new special drawing rights and development assistance. However, I have taken particular note of the view of the Chancellor of the Exchequer of the United Kingdom, when he said: "Although no formal link has been established, I am hopeful that the contribution of the SDR scheme to the world's liquid resources may help to create more favorable conditions for the growth of development aid." A similar view was expressed by Governor Colombo of Italy. This thought was echoed by a number of other Governors and it is a view I share.

[Excerpt from United Nations press release issued Sept. 25, 1969]

UNCTAD Expert Group on International Monetary Issues Concludes Session—Recommends Link Between New Reserves and Development Assistance

A group of experts appointed by the Secretary-General of the United Nations Conference on Trade and Development (UNCTAD) has recommended that a link should be established between the creation of new international liquidity in the form of special drawing rights (SDRs) and the provision of additional development assistance.

The group, which concluded its nine-day session today, emphasized that, while purely monetary considerations should determine the amount, the timing and the allocation of special drawing rights to be created, it was both feasible and desirable to introduce a link between international liquidity and provision of development finance.

The group considered two main approaches to the implementation of the link proposal. The first would involve a direct contribution by the developed countries to the International Development Association (IDA) of a uniform proportion of their annual allocations of SDRs, while the second would require contributions of national currencies to the IDA by the same set of countries in a uniform proportion to their annual allocations of SDRs.

Both approaches were considered technically feasible by the group. In view of the urgency of increasing the flow of aid, the group favoured whichever approach to the link would secure the requisite agreement of governments most readily

---

[Excerpt from "Partners in Development," report of the Pearson Commission, p. 225]

Turning to other possible means of funding IDA, it has been suggested that contributions to IDA should increasingly be made in the form of interest-free fifty-year loans rather than grants. This has already been done by Switzerland. Although we believe that the traditional method of replenishing IDA by subscriptions of grants is preferable, it is possible that a more general recourse to such loans would make it easier for some governments with budgetary problems to meet their share in an expanded IDA.

Another way of increasing the resources available to the Association might be for the governments of developed countries to make available to IDA part of the Special Drawing Rights which they are allotted in the International Monetary Fund. The activation of the SDR scheme is an important step in the evolution of the international monetary system. However, it amounts to creation of several billion dollars of additional purchasing power which, as the system evolves cannot fail to raise the suggestion that a larger fraction of such purchasing power should be steered to developing countries. (Under present arrangements, developing countries would receive only about one-third of the SDR's.) This is not to say that the magnitude of the desirable increase in world liquidity should be determined by IDA's requirements. But when the scale of the issue of SDR's has been decided on appropriate grounds, there are strong reasons of simplicity and equity for the developed countries to relinquish a part of their quota of the new reserve medium in favor of the less developed countries. IDA may be a channel by which the contribution of the resources to development could be assured, and proposals for making use of this channel in this way are worthy of further study.

Development Aid and International Monetary Creation: A Marriage of Convenience

(Address by Representative Henry R. Reuss, of Wisconsin, to League of Women Voters conference, Racine, Wis., October 16, 1969)

This is the U.N. development decade. This is the decade in which the developed world was supposed to contribute 1 percent of its gross national product to the developing world. The decade is ending, unfortunately, not with a bang but with a whimper.

Public outflows to the developing world from the 16 richest non-Communist nations are today .39 percent of the donors' GNP. Including private flows brings the total to barely .75 percent. And the United States is contributing a smaller proportion of its GNP —.35 percent—than countries like the United Kingdom, France, Belgium, West Germany, and the Netherlands. The foreign aid request now before the U.S. Congress is the lowest in 20 years.

The Pearson Commission recommends that official aid, as a percentage of GNP, increase from its present .39 percent to at least .70 percent by 1975.

The current shortfall of development assistance comes at a time when populations are increasing; at a time when the burden on the developing countries to repay their loans is getting heavier every year; and at a time when their capacity to absorb development aid is at an all-time high.

The great hope for multi-lateral, capably administered, long-term concessional foreign aid is the International Development Association, now in its tenth year. But IDA is now substantially broke. The actual rate of the IDA reimbursement now undergoing approval is only $400 million a year for three years, of which the United States' share is $160 million a year. World Bank Presidents George Woods and Robert McNamara have urged that IDA have at least $1 billion yearly of aid-giving funds. The Pearson Commission recommends that IDA lending be expanded to $1.5 billion yearly by 1975.

While the developing nations in general, and IDA in particular, have been defaulting, a hopeful development has been going on in another branch of world economics—international monetary reserves. Confronted by the prospect that foreseeable world reserves of gold and dollars will be inadequate to finance world trade and investment, the International Monetary Fund in Rio in September, 1968, agreed on an amendment to supplement gold and dollars—sterling as reserves by distributing special drawing rights to its members. On July 28, 1969, the Rio agreement was ratified. The September, 1969, IMF meeting approved a three-year allocation of SDR's of $9.5 billion. Paper gold will thus be distributed next January.

These SDR's will not be "earned" by their recipients, but will be distributed among them in proportion to their IMF quotas. Inevitably, this means that the rich will get richer, and the poor will get the crumbs. The industrial nations of Europe, United States, Canada, and Japan will get 64 percent of the new reserves. The United States and the United Kingdom alone will receive 36 percent. The remaining roughly one-third of the new manna from heaven will be distributed among the non-industrialized 90-odd members of the IMF.

Such an unequal distribution of SDR's cannot help but rub salt in the wounds of developing countries already disappointed by the outcome of the decade of development. But perhaps we can pluck from the nettle of frustration the flower of opportunity.

The Congressional Joint Economic Committee, through its Subcommittee on International Exchange and Payments, last August recommended a marriage of convenience between development aid and the new SDR's. Briefly, we recommended that the 18 wealthy members of the IMF (the United States, Canada, the countries of Western Europe, Japan, Kuwait, South Africa, Finland and Australia) direct that 25 percent of their special drawing rights allocations be retained by the IMF to finance expanded IDA development aid. The Pearson Commission felt that the proposal was "worthy of further study". More than a score of world bank governors, mostly from the less developed countries, endorsed the proposal at the September, 1969, annual meeting. The Brookings Institution is setting up a study group to work out in practical detail how the proposal might be carried out.

Here are some advantages of the proposal:

1. *It Would Double IDA's Lending Capacity, Approximating the Recommended $1 billion Annually.*

As I have said, the present IDA replenishment of $400 million annually is far less than the $1 billion annual replenishment the World Bank feels is the minimum needed.

The SDR linkage proposal, assuming all 18 donor countries agreed, would result in 25 percent of their annual allocations' being assigned to IMF/IDA. The prospective SDR allocations to these 18 wealthy countries would be $2.15 billion annually. 25 percent of this would be nearly $540 million annually. This is more than double the present IDA-lending capacity, and would bring IDA's total lending capacity close to the recommended figure of $1 billion annually.

2. *It would Obviate the Balance-of-Payments Problem Which Inhibits Present Aid-Giving.*

A donor nation's weak payments position today frequently furnishes an excuse for curtailing its economic development assistance. Linking SDR's to development aid would effectively remove the balance-of-payments problem from the IDA sector of development aid.

In the first place, the participating donor countries would be cutting themselves off at the source from only 25 percent of SDR's. To this element, they would be in a position similar to that of a donor in the United States who immobilizes a portion of his anticipated income by participating in the United States Savings Bond payroll-deduction plan. The donor nations would, of course, receive 75 percent of their tentatively allocated SDR's, and would thus be in that much better reserve position than they are now. Thus the linkage proposal substantially eliminates the balance-of-payments problem—although, of course, one can always say that even wealthy countries would always like to get that extra 25 percent of new reserves without earning them, as well as the 75 percent they would get anyway.

In the second place, even the 25 percent of reserved SDR's will shortly come back to the developed donor countries overall, although whether each such country gets back its 25 percent share depends on its competitive ability to sell the goods the developing countries need.

3. *It Would Obviate the Present Practice of Tying Aid Purchases to the Donor Country, thus permitting Recipients to Buy in the Cheapest Markets, and Donors to Obtain the Benefits of International Competitiveness.*

The linkage proposal, in addition to substantially removing the risk of adverse balance-of-payments consequences, would thereby also avoid the need for present aid-tying practices in so many developed countries. These practices not only increase the cost of development aid to the developing countries, but diminish the incentive in the donor nations to fight inflation by remaining competitive.

The quantity of SDR-financed purchases made in a particular nation will be governed by that company's competitiveness as a supplier of goods and services demanded by developing countries. Price, the speed of delivery, and the availability of service are all important elements of a supplier's competitive position. Thus, there is no reason to expect that SDRs donated to IDA through IMF by a particular industrial country will in fact be spent for exports from the same country. If an industrial supplier is highly competitive, SDRs donated by other nations may be used to purchase its exports. Conversely, if a donor is not competitive, the donor would be unlikely to earn SDRs that it or any other nation had given to IDA.

The spur to competitiveness inherent in the untied-aid SDR linkage proposal should produce an anti-inflationary effect on the developed countries to counteract any inflationary effect inherent in the extra $540 million overall demand by the developing countries on the industrial capacities of the 18 donor countries. Of course, fulfillment of the one-percent-of-GNP commitment implies that industrial countries must pursue sufficiently sound fiscal and monetary policies so as to retain some reserve of unemployed resources after satisfying domestic consumption and investment demand and after any commercial export surplus. Otherwise, they would have no reserve capacity to produce gifts of goods and services for developing nations. But an additional development aid demand of one-half a billion dollars a year is not likely to be the inflationary straw that breaks the camel's back in the developed countries, with a total annual GNP amounting to two thousand billion dollars!

4. *It Would Eliminate the Present Need for Domestic Budgeting and Taxation in Order to Provide Development Aid.*

Present foreign aid practices, whether bilateral or through contributions to an international lending agency like IDA, require that Congress, and other national legislatures, include foreign aid in the regular budget, and levy taxes to pay for it. Under the linkage proposal, international monetary expansion—already agreed to by the SDR amendment—would provide the financial wherewithal for this foreign aid. Domestic budgeting and taxation would not be needed. This assumes, of course, that the donor country will take adequate expenditure, taxing, and monetary measures to assure that its economy does not overheat beyond a full-employment-without-inflation level. But the taxes so levied would be not for foreign aid, but to reduce private spending to non-inflationary proportions.

5. *It Would Eliminate the Need for Annual Legislation Inherent in Bilateral Aid-Giving.*

The United States Congress, and many other legislatures, now funds its bilateral aid on an annual basis. Contributions to IDA and other international development banks are usually funded on a three-year basis.

Annual funding, with its on-again-off-again uncertainties, impedes the rhythm of economic development, and thus wastefully adds to its cost.

While the consent of Congress, and of some other national legislatures, would be required for ratification of the proposed linkage amendment, this would be on a once-and-for-all basis, rather than an annual basis. Precedents for such an open-ended Congressional authorization are contained in the legislation setting up the United States Stabilization Fund of 1933; in the Federal Reserve legislation which permits the Federal Reserve System to engage in a continuing series of multibillion dollar "loans" and "swaps" for international monetary stabilization; and in the Special Drawing Rights amendment itself, which Congress approved, permitting the executive to agree to annual allocations of SDR's without further reference to Congress. Congress could at any time, of course, vote to rescind United States participation, from that time on, in the linkage amendment.

6. *It Would Meet the Demands of Developing Countries for More Assistance in a Constructive Way, and Would Alleviate the Rich Man's Club Aspect of the President SDR Allocation.*

The proposed link would help offset the tendency of the SDR amendment to distribute the preponderance of these new claims to wealthy countries, and at no real cost to them. While logical arguments can be advanced to support distribution of SDR's strictly according to IMF quotas, this arrangement appears discriminatory. It will intensify antagonisms on the part of developing nations towards wealthy members of the IMF. The distribution mechanism can be modified to permit industrial nations to earn some of their * * * of services and capital goods to developing countries, rather than receive all of them as manna from heaven, without altering the fundamentals of the Special Drawing Rights agreement.

Possible objections to the proposal seem to me answerable:

1. *"It Will Cut Down the SDR's the Wealthy Will Receive".* Yet each wealthy country will receive 75 percent of its anticipated SDR allocation, and the wealthy countries together will very shortly receive the remaining 25 percent through development aid orders. Thus the wealthy together will receive all their expected windfall.

2. *"It Will Cause Inflation in the Donor Countries by Expanding Demand from the Developing Countries".* In fact, the modest additions to worldwide demand created by the linkage agreement are tiny in relation to the combined industrial capacity of the donor countries.

Moreover, there are adequate defenses for each individual donor country against the inflation-producing demand engendered by the linkage agreement.

In the first place, each donor country, in this modern age, has the fiscal and monetary weapons to combat demand inflation.

It is true that if the level of national output is continuously maintained at the full-employment level, any expansion in the quantity of goods and services given to developing countries entails an equivalent sacrifice of domestic consumption or investment. But no industrial country is able to maintain full employment continuously, and during periods when domestic resources would otherwise be unemployed, development assistance cannot be considered a real cost.

The entire industrialized world has never, except perhaps during World War II, produced at a level such that no further increase in real output was possible. At any given time, a reserve of unemployed resources will amost certainly be available in Japan, North America, or Western Europe.

When the industrial resources producing goods as aid would otherwise have been unemployed, everybody gains. Economic growth in developing countries accelerates, and the industrial country producing the exports will also benefit. The exports are produced at no real cost to the suppliers. Moreover,

export orders that bring unemployed labor and plant facilities into use create beneficial domestic multiplier effects, which in turn create still more jobs. Thus, even after making a gift of exports, the industrialized country extending aid may well benefit in terms of increased domestic consumption or investment.

In the second place, an industrial nation suffering from persistent export surpluses and inflation can resort to a number of techniques to discourage additional export orders from developing countries. The government can informally urge domestic manufacturers to refuse additional orders or state very long waiting periods for filling them. It can impose export taxes or statutory export embargoes, or it can revalue its currency upwards. If the world moves toward somewhat greater exchange rate flexibility, such revaluations would become less painful than at present.

3. *"It Will Create Pressures for Issuing Excessive Amounts of SDR's, Thus Compromising Their Acceptability."*

While there is no undisputed criterion that can be used to determine what would be the exactly appropriate quantity of SDR's to distribute, small differences in the quantity supplied will probably not have a noticeable impact of their acceptability. As is widely recognized now, the acceptability of SDR's does not depend upon any assets used to back them. In fact, there is no backing as such, and the acceptability of SDR's depends upon the commitment of the IMF members to honor these instruments in the settlement of international payments surpluses and deficits.

The quantity of SDR's distributed, under both the SDR amendment and the linkage proposal, should be determined *solely* according to the needs of the international monetary system, as determined collectively by the members of the IMF. Under no circumstances should the future usefulness of the SDR facility be impaired by excessive distributions, especially at the outset. The long-range benefits that the less-developed countries could derive from a linkage mechanism would be seriously impaired if the acceptability of SDR's were undermined. One can therefore sympathize with those who favor a cautious approach until Special Drawing Rights have been accepted as a permanent feature of the international monetary system.

While the needs of the international monetary system should exclusively determine the amount of SDR's distributed, the 85 percent majority required by the SDR amendment for determining the quantity assures that the linkage proposal would have no significant impact on the size of SDR distributions. Since countries with only 15 percent of the voting power in the IMF can veto an SDR distribution that these nations consider excessive, the more likely danger is that not enough, rather than too many, SDR's will be created. Given this stringent veto provision, the danger that the developing countries could control or substantially influence the size of SDR distributions seems far-fetched.

If the developing countries desired to expand the quantity of SDR-financed real resource transfers in their behalf, they would enjoy a much greater likelihood of success if instead of lobbying for an increase in the total quantity of SDR's distributed, they urged individual industrial states to increase the 25 percent proportion of SDR allocations donated to IDA, or to put up a fixed amount, like $1 billion a year. In the absence of any fixed relationship between total SDR distributions and IDA donations, any attempt to increase development assistance through pressure for larger total distributions could be counterproductive.

4. *"It Will Cause Legislatures in the Donor Countries to Lose Control Over Foreign Aid,"*

while the assent of Congress, and of other national legislatures where required, would be necessary only in order to inaugurate the linkage amendment, Congress and the other legislatures could at any time vote to withdraw from, or to alter, the linkage proposal.

Thus a marriage between development aid and monetary reform is an idea whose time will surely come. All that is needed is a statesman or two willing to try his hand at marriage broker.

THE FCC—REGULATOR OR REGULATED?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, the Federal Communications Commission is celebrated as an agency that has become the captive of the industry it is supposed to be regulating—it not so much regulates as it gets regulated, so to speak. Its constituents are not the people who own the airwaves, but the broadcasters who use those airwaves. There seems always to be one Commissioner—somehow the number never exceeds one—who demands that the FCC get bold, that it be activist, that the quality of programing should rise, that indeed the FCC should demand better programs, and who in general makes pointed speeches and writes eloquent and sometimes even moving dissents. But somehow the FCC remains the same, and nothing ever really happens.

A question that interests me very much is whether or not broadcasters have the responsibility to tell the truth in their news and documentary programs. The actions of the FCC to date seem to indicate that the Commission feels that broadcasters can say what they want to, true, false, or in between. The Commission will grant that a particular story is false, or a particular film slanted or distorted, but is unwilling to demand that any corrective action be taken. It is unwilling to guarantee that the public be told the truth.

I could understand the Commission saying that a live news report can carry omissions of fact or even errors of fact, because there are situations where a reporter could not be reasonably expected to be able to ascertain all the facts of an event. It is hard to get a clear picture in the midst of a riot. However, there are also situations where the broadcaster can be expected to know the truth, and should be responsible for sticking to it. Unlike a live event, a documentary film is produced more or less at leisure, and there is ample time to establish the facts and obtain a balanced, reasonably objective view of events. Yet the FCC says that a documentary program can contain blatant errors of fact, be grossly distorted, and still be a good news production. The logic of this escapes me. Yet this is precisely what the Commission seems to have said in its refusal last week to undertake so much as a hearing into the CBS "Hunger in America" show, which opened with a shocking but patently false scene purporting to show an infant dying of hunger.

The simple fact is that the FCC either does not know its responsibility or is powerless to act. It looks as if the Commission is powerless to act, since I am unwilling to concede that it does not know its responsibility. I think that the evidence over the years is overwhelming that the FCC is paralyzed, powerless to regulate the industry of broadcasting. The Commission is simply a captive; it has no effect beyond its ability to allocate broadcast bands in various areas, and I think that it would not even be able to exercise this power if the industry did not know that regulation is essential to keep the air from being overwhelmed with conflicting signals, which would ruin their product. So they suffer that much regulation. Beyond that, I cannot understand what net effect the FCC has on the quality of broadcasting, on the public service required of broadcasters, or in the protection of the public interest in broadcasting. I think that it has none, or so little that it is not noticeable. Mr. Speaker, I take the liberty of calling the attention of the House to a letter I have just sent the Chairman of the FCC:

OCTOBER 21, 1969.

Hon. ROSEL H. HYDE,
Chairman, Federal Communications Commission, Washington, D.C.

DEAR MR. HYDE: I understand from press reports that the Commission has decided, by a 7–0 vote, not to take any further action with respect to untrue and distorted statements in the CBS production "Hunger in America." I have not yet received a copy of the decision, and am disappointed that the Commission has not yet furnished me a copy, despite my well known interest in this case.

I believe that the Commission action in this matter is erroneous.

In cases where television news is covering live events, it is probably inevitable that occasional errors of fact are reported, and it is understandable if in the heat and pressure of events a reporter distorts his story. However, in the case of a documentary, where there are no such pressures of time and events, there is ample time for the reporter to check his facts and to obtain a clear viewpoint. The "Hunger" show was no live report of a riot, but an investigative report supposedly put together after careful study. Yet "Hunger in America" opened with a scene which all agree was a wild error, selected for shock value more than for any information that it could have conveyed. Aside from this, the show contained numerous other falsifications and distortions. Yet the Commission is unwilling to take any kind of stand or any kind of action on such shows. The public is left at the mercy of the networks, whose sense of rectitude is well known to be controlled more by ratings and sales than by any desire to inform or enlighten the public.

The Commission has erred in this case, and I am deeply disappointed, not because my point of view has been ignored by you, but because the Commission has chosen to ignore the rights of the public to be informed rather than misinformed, and the responsibility of the networks to convey the truth rather than convenient distortions of it.

I firmly believe that the "Hunger in America" show might have been even more devastating than it was, had the producers elected to stick to the facts. Unfortunately, their sense of showmanship intruded into their judgment more than it should have, and now the Commission has blessed ledgerdemain in the name of social concern.

Sincerely yours,

HENRY B. GONZALEZ,
Member of Congress.

THAILAND HAS BEEN A VERY GOOD FRIEND TO THE CAUSE OF FREEDOM

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SIKES. Mr. Speaker, the current discussions about Thailand and the United States on the partial withdrawal of U.S. forces stationed there may leave a confused picture of the role the Thai have played in the Vietnam war. Actually, Thailand has made outstanding contributions to the allied cause, both in South Vietnam and in the Republic of Korea, and, in addition, Thailand has taken a leading role in the area of Asian regionalism.

In plain English, the Thai have taken a calculated risk which would have exposed them to harsh repercussions from Communist nations had the war gone sour for the allied cause. More than any countries other than South Vietnam and South Korea, Thailand has directly assisted the allied military effort. The United States has had the use of Thailand bases and staging areas which have made possible great savings in time, manpower, and equipment. Even more significantly, the Thai have permitted the involvement of important military forces of their own in the fight against Communism.

A very real debt of gratitude is owed to the Thai Government and the Thai people for their support of our objectives. It is important that the American people realize that they have put much more on the line in our behalf than was required and that this support should be considered in our future dealings with Thailand. This strong little country is on the Communist blacklist because of its friendship for us.

I mentioned Thailand's role in the area of Asian regionalism.

East Asian nations generally are divided by differences in language, culture, and often history. Though often thought of collectively, there are, in fact, few inherent bonds tending to tie these nations together. The security of this part of the world depends on positive efforts toward promoting regional cooperation to overcome the Balkanized situation in the area, which weakens each individual nation, makes them easy targets for external domination, and militates against U.S. interests in this part of the world.

Encouraging Asian nations to look at each other for mutual assistance has long been a policy of the United States. It is thus in the national interest of the United States to support the concept of regionalism in this area so as to strengthen the self-reliance of the area nations as well as the area as a whole and reduce their dependability on external assistance.

Thailand, more than any other country in Southeast Asia, has recognized the immediate need for and potential benefits to be derived from regional cooperation. It was one of the original signatories of the Southeast Asia Collective Defense Treaty and has provided SEATO the treaty's organization, with, among other things, two secretaries-general and the organization's headquarters. The Thai have continued to take an active role within SEATO and have worked to assure the viability of the organization.

Thailand has been a motive force in the formation of several strictly regional groupings such as the Association of Southeast Asian Nations—ASEAN—and the Southeast Asia Ministers of Education Council—SEAMEC. Bangkok serves as the headquarters for a number of regional organizations, including the United Nations Economic Commission for Asia and the Far East—ECAFE—the Asian and Pacific Council—ASPAC—Economic Center, and SEAMEC. A number of United Nations specialized agencies—FAO, UNESCO, UNICEF, ILO, and so forth, have their Far East area headquarters in Bangkok.

In addition to its membership and participation in regional organizations, Thailand has made significant contributions on an ad hoc basis to the restoration and maintenance of peaceful relations among the nations of the area. In the period from 1963 to 1966, when Indonesia was involved in its "confrontation" with Malaysia, and relations between the Philippines and Malaysia had been suspended over the Sabah question, Thailand actively sought to mediate these differences. Their efforts were rewarded in 1966, when the Philippines and Malaysia reestablished normal diplomatic relations, and when, following a conference held in Bangkok, hostilities between Indonesia and Malaysia were brought to an end.

Thus, I think it obvious from every standpoint that America needs a clearer understanding and appreciation of the role Thailand plays in Southeast Asia. Thailand has indeed been a good friend to the cause of world freedom.

PANAMA CANAL MODERNIZATION GEARED TO WORLD TRADE NEEDS

(Mr. FLOOD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FLOOD. Mr. Speaker, in a statement before this body in the CONGRESSIONAL RECORD of February 19, 1969, entitled "Panama Canal Modernization: Time for Action Has Come," I summarized the principal elements in the canal problem and emphasized the Terminal Lake-Third Locks modernization plan as providing the best solution from all significant points of view. The remarks made on that occasion were not "off the cuff" words but the considered conclusions of qualified experts, including experienced officials and other employees of our Government concerned with the maintenance, operation, sanitation, protection, and defense of the canal.

Appropriate bills for the needed major increase of transit capacity and operational improvement of the Panama Canal have been introduced in the present Congress, both House and Senate. The solution contemplated in them provides not only the best solution but also protects the best interests of Panama and the United States as well as Interoceanic Commerce and Hemispheric Defense.

It was, therefore, with the greatest interest that I read in a 1968 issue of the Christian Science Monitor a most illuminating historical article by William B. Collier of Santa Barbara, Calif., in which he summarizes the key features of the Terminal Lake-Third Locks plan, which he advocates as being geared to world trade needs.

In this connection, I would emphasize that a total of $76,357,405 was expended on the suspended Third Locks project before construction on it was suspended, with completion of lock site excavations at Gatun and Miraflores for a set of larger locks. With the completion of the current enlargement of Gaillard Cut scheduled in 1970 at an estimated cost of $81,257,097, the total expenditures for the major modernization of the existing Panama Canal will total more than $157,000,000, which is too great a sum to be ignored.

Mr. Speaker, as the indicated article by Mr. Collier will be of great interest to all Members of the Congress concerned with canal problems and navigation interests that have to pay tolls, I quote it as part of my remarks, as follows:

[From the Christian Science Monitor, Oct. 7, 1968]

PANAMA CANAL MODERNIZATION GEARED TO WORLD TRADE NEEDS

(By William B. Collier)

Ever since Ferdinand de Lesseps embarked upon his unsuccessful undertaking to dig a sea-level canal connecting the Atlantic and Pacific oceans, visions of a Straits of Panama with oceangoing vessels steaming majestically through the Isthmus of Panama have captured the imaginations of many people.

Unfortunately, those who favor such a dream fail to accommodate to the facts of the situation, First, the tides at the Atlantic and Pacific ends of the canal differ greatly in magnitude. At Cristobal on the Atlantic side the extreme range is seldom more than three feet; at Balboa on the Pacific side the extreme range is well over 22 feet. Also, they lack respect for the forces of nature, so often exhibited at Panama in the move of massive landslides.

The basic principle for the best and most economically feasible method of transiting ships across the Panamanian mountains was the first proposed to Ferdinand de Lesseps and the International Congress for Consideration of an Interoceanic Canal at Paris by Adolphe Godin de Lepinay in 1879.

He alone, among all the French engineers, knew the topography, the nature of the torrential floodwaters of the Chagres River, and the necessity of controlling it. With the vision and simpliicty of true genius he proposed: "Build a dam at Gatun and another at Miraflores or as close to the seas as the configuration of the land permits. Let the waters rise to form two lakes about 80 feet high, join the lakes thus formed with a channel cut through the continental divide, and connect the lakes with the oceans by locks. This is not only the best plan for engineering but also best for navigation."

FUNDAMENTAL PLAN NOTED

Adolphe Godin de Lepinay's concept is the fundamental plan for constructing the interoceanic canal adopted by John F. Stevens, chief engineer of the Isthmian Canal Commission, who is recorded in history as "the basic architect of the Panama Canal."

Although the high-level lake and lock canal approved by Congress provided for twin flights of three lock chambers raising ships to summit level at Gatun, it provided for separated locks at Pedro Miguel and Miraflores with Miraflores Lake at intermediate level of 54 feet.

Chief engineer Stevens recognized the operational problem which would arise from separation of the Pacific locks and approved a plan developed by William Gerig placing all Pacific locks in single structures with three lifts south of Miraflores, with the dams and locks between two hills, Cerro Agua-dulce on the west, and Cerro Puente on the east.

This plan would have made possible summit-level navigation from the Atlantic locks to the Pacific with a high-level anchorage in Miraflores Lake similar to the arrangement at Gatun.

Mr. Stevens was succeeded as chief engineer of the Isthmian Canal Commission by Col. George Washington Goethals, United States Army Engineers. He carried the work through to a successful conclusion. His assistant, Col. William L. Sibert, U.S.A., in charge of locks and dams, appreciated the superiority of the Stevens plan from the point of view of marine operations but was unable to persuade his chief to adopt it.

LOCATION IN ERROR?

Years of marine operating experience both in peace and in war have demonstrated conclusively that the location of Pedro Miguel locks at the south end of Culebra Cut was the basic error in operational design of the Panama Canal.

Every ship which passes through the Panama Canal is raised to summit level and lowered to sea level at the other end of its transit by gravity flow of water from Gatun Lake. Also, power for operating the lock gates and the towing locomotives which tow ships through the locks is generated by gravity flow of water.

During the dry season of 1919 the heavy flow of traffic demonstrated the need for additional storage of the head waters of the Chagres River to provide additional water for the navigating channels during the dry season and for the generation of additional electric power. Congress authorized the construction of Madden Dam and Reservoir. This project was completed in 1935.

The Third Locks Project set forth in the "Report of the Governor of the Panama Canal," Feb. 24, 1939 (House Document 210, 76th Congress, first session), was authorized by Act of Congress, Aug. 11, 1939. Over $76 million was spent, mostly on excavating for a third flight of larger locks at Gatun and at Miraflores from 1940 to 1942, when work was suspended because of wartime shortages. No excavating was done for a third lock at Pedro Miguel. This wartime interruption of building a third set of larger locks made it possible to develop a better plan in accordance with the original concept of Messrs. de Lepinay, Stevens, and Sibert. It is called the Terminal Lake-Third Locks plan.

Capt. Miles P. DuVal, USN (Ret.) historian of the Panama Canal and from March 5, 1941, to June 30, 1944, captain of the Port of Balboa, has written a most interesting account of the long struggle over four centuries for a convenient sea route from the Atlantic to the Pacific oceans in "Cadiz to Cathay."

A quote from the epilogue of his second volume, "And the Mountains Will Move," reads:

"Based upon his studies and repeated operating experience, the author developed and submitted a plan for the fundamental simplification and improvement of the Panama Canal. He presented his plan publicly on May 20, 1943, before the Panama section of the American Society of Civil Engineers, in a paper entitled 'The Marine Operating Problem of the Panama Canal and the Solution.' The plan consists of the removal of the bottleneck lock at Pedro Miguel, the construction of all Pacific locks in single structures near Miraflores, and the creation of a large summit-level terminal lake for an anchorage on the Pacific end of the canal to match the arrangement at Gatun."

APPROVAL RECEIVED

The Terminal Lake-Third Locks project received the approval of engineers experienced in the problems of the Panama Canal; of shipping interests using the international waterway, who must pay for the improvement in the form of the canal-supporting tolls; of the governor of the Panama Canal, and who were then Secretary of War and the Secretary of the Navy. It was approved as a postwar project by the President of the United States.

Meanwhile, the need for increasing the capacity of the existing canal to meet the increasing needs of world shipping must be satisfied. Since 1960 the project of widening the ship channel through Culebra Pass from 300 feet to 500 feet is proceeding on schedule. Five miles of the ship channel have been widened, and the remaining three miles will be completed by 1971.

All that is needed to accommodate more and larger ships is completion of a third flight of larger locks at Gatun, the consolidation of all Pacific locks at Miraflores, the raising of Miraflores Lake to summit level, and the removal of the dam and locks at Pedro Miguel. The summit level can then be raised to the optimum of 92 feet to provide increased water-storage capacity and to deepen the navigating channels.

The cost of modernizing the present canal in accordance with the Terminal Lake-Third Locks plan is relatively modest and can be paid for out of revenue from tolls. No new treaty with Panama is required, since no new territory to encompass the proposed improvement will have to be added to that purchased from Panama in 1903.

When the Panama Canal has been modernized in accordance with the legislation now before Congress, transit time will be reduced by eliminating the double handling of vessels at Pedro Miguel and Miraflores locks. The capacity of the canal will be increased by approximately 50 percent, and the size of the additional locks will be 1,200 feet long by 140 feet wide with 45 feet of water over the sill.

This additional lockage capacity is vital if the Panama Canal is to meet the need of world trade for the balance of the present century.

PANAMA CANAL ISSUES: CONFUSIONS CLARIFIED

(Mr. FLOOD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FLOOD. Mr. Speaker, as a student of Panama Canal history and interoceanic canal problems over many years, I long ago noted that whenever the Isthmian Canal question comes up for serious consideration, the subsequent discussion follows a predictable pattern. First, there are rivalries between advocates of various sites historically known as battles of the routes and next there are contentions over the type of canal to be constructed that may be described as "battles of the levels." A third idea regularly promoted has been that of a ship-railway across the Isthmus of Tehuantepec.

The latest proposal for interoceanic transit facilities, which is only a variation of the third issue just mentioned, is a ship-rail-ship project from the Gulf of Mexico to the Pacific Ocean across the Southwestern part of the United States in an article in the April 1969 issue of the U.S. Naval Institute Proceedings by Rear Adm. H. H. Gibbs, U.S. Navy, retired, entitled "A Southwest Passage?"

In line with its regular practice, the Naval Institute Proceedings, in its Comment and Discussion section has published some commentaries on the Gibbs article in its September and October 1969 issues. The first by me in September attempts to bring the principal issues of the interoceanic canal problem into realistic perspective and supplies indispensable facts and figures for proper understanding. Three other commentaries in October by Prof. Richard B. O'Keeffe of the George Mason College of the University of Virginia, Capt. E. B. Perry, U.S. Navy, retired, and Lt. Albert H. Robbins, U.S. Navy, develops other interesting angles with appropriate classifications.

In order that the indicated discussions may be more widely known, I quote them as parts of my remarks as follows:

[From U.S. Naval Institute Proceedings, September 1969]

"A SOUTHWEST PASSAGE?"—COMMENT AND DISCUSSION

(By Hon. DANIEL J. FLOOD of Pennsylvania)

(See H. H. Gibbs, pages 64–73, April 1969 Proceedings.)

As a member of the Congress with assignment for many years to the Subcommittee on National Defense of the House Committee on Appropriations, and as a long-time student of interoceanic canal problems, I have read the article by Rear Admiral Gibbs with considerable interest. Though it introduces some new angles into current canal discussions, it does not present the real issues involved, which must be understood and not ignored if our canal policies are to be wise.

The gross investment of the United States, from 1904 through 30 June 1968, including defense, in the Panama Canal enterprise was $6,368,009,000. Total recoveries during the same period were $1,359,931,421.66, making a net investment of over $5,000,000,000.

The Isthmian Canal policy of the United States as developed over many years and which is embodied in treaty and law, has these objectives: the best type of canal, at the best site for the transit of vessels of all nations, on terms of equality, with tolls that are just and equitable. It was pursuant to this policy that the United States acquired by treaty with Panama the grant in perpetuity of sovereign rights, power, and authority over the Canal Zone territory and constructed the high-level-lake and lock type canal, all to the entire exclusion of the exercise by Panama of any such sovereign rights, power, or authority. The United States also obtained ownership of all land and property in the Zone by purchase from individual owners.

In these connections, it is important to realize that Panama has been, and still is, an area of endemic revolution and endless political instability; and that at the time of acquisition, it was one of the worst pest holes in the world.

The construction of the Panama Canal was one of the truly great achievements of man. Its subsequent maintenance, operation, sanitation, and protection have measured up to our solemn treaty obligations. The transit since opening to traffic on 15 August 1914 through 30 June 1968, of 403,230 vessels of various types and descriptions during both peace and war (World Wars I and II, Korean, and Vietnam, as well as the 1962 Cuban mis-

sile crisis) completely establishes the wisdom of the original construction.

As to current discussions over the type of canal, the idea of constructing a canal at sea level is a "hardy perennial." It appeals strongly to the manufacturers of heavy earthmoving machinery, dredging combines, a limited number of professional engineers, and various theorists. Many independent experienced engineers, navigators, and scientists oppose it. Thus, Rear Admiral Gibbs' emphasis that certain large vessels now constructed or planned were designed to avoid transit of either the Panama or Suez Canals for the reason that it is more economical for them to go around Cape Horn or the Cape of Good Hope rather than pay tolls is most pertinent. Also, as he points out the closure of the sea-level Suez Canal in 1967 by means of "primitive weapons" is highly significant. It dramatizes the irrelevance of the ancient argument of "vulnerability" to enemy attack in the design of navigation projects. The true criteria, the only basis, for such planning are ease and safety of navigation.

Many years of experience in the operation of the Panama Canal have shown that what is needed there is a two-way ship channel in the summit level, with ample and logically arranged locks at both ends.

The two-way ship channel will be supplied on completion in 1970 of the enlargement of Gaillard Cut from 300 feet minimum bottom width to 500 feet. The required lock capacity and arrangement will be provided under the Terminal Lake-Third Locks Plan.

This proposal, which would eliminate the bottleneck locks at Pedro Miguel, consolidate all Pacific Locks at one location south of Miraflores, create a summit-level lake anchorage at the Pacific end of the Canal, and solve other important marine operating problems, was developed by the Panama Canal organization as the result of World War II experience. It was recommended by the Governor of the Panama Canal to the Secretary of War for comprehensive investigation. It won the support of the Secretary of the Navy, and was approved by President Franklin D. Roosevelt as a postwar project.

The original Third Locks Project, authorized in 1939 at a cost not to exceed $277,000,000 was suspended in May 1942 because of more urgent war needs, after a total expenditure of $76,357,405, largely for huge lock site excavations at Gatun and Miraflores which are still usable. The estimated cost for enlarging Gaillard Cut is $81,257,097. These two projects together, representing an expenditure of more than $157 million are a substantial commitment by our government for the major modernization of the existing Panama Canal. Moreover, such modernization of the existing Panama Canal enables the maximum use of all work so far accomplished in the construction of the Canal and its subsequent maintenance, and it does not require a new treaty with Panama with the inevitable huge indemnity and increased annuity that would be involved. Thus, the United States would continue its full control and ownership of the Canal Zone and Canal.

The principal issues in the present canal situation are:

The safeguarding of our indispensable sovereignty over the Canal Zone, now jeopardized by ill-advised proposed new treaties.

The necessity for increase of capacity and operational improvement of the existing canal through the major modification of the authorized Third Locks Project under the Terminal Lake-Third Locks Plan.

The subject of a second canal.

As to these points, extensive clarifications in the Congress over a period of years have removed the confusion surrounding them and cleared the way for proper action by our government. This action is the major increase of capacity and operational improvements of the existing canal, and bills for the "Panama Canal Modernization Act" have been introduced.

The enactment of such legislation not only will protect the vital interests of the United States, benefit Panama, serve world commerce, and safeguard our indispensable sovereign rights, power, and authority over the Canal Zone and Canal, but will also clear up the entire canal situation.

[From U.S. Naval Institute Proceedings, October 1969]

A SOUTHWEST PASSAGE

(See H. H. Gibbs, pages 64–73, April; and D. J. Flood, pages 118–119, September 1969 Proceedings.)

Richard B. O'Keefe, George Mason College—Admiral Gibbs appears to have decided a question that is very much alive and undecided, i.e., lock *vs.* sea level canal. He should be assured that this argument is neither concluded nor arcane. A considerable body, made up of engineers, canal experts, members of Congress, and academicians continues to argue quite cogently that a lake-lock canal at Panama is navigationally, operationally and politically superior to a sea level canal.

Referring to the disaster of oil spillage, Admiral Gibbs almost makes, but misses an important point in "Only recently, a bulk carrier sank in Gaillard Cut under circumstances that could have existed at sea level. Such disasters can be prevented, but the remedial action is necessarily extremely expensive." The fact is the Japanese bulk carrier that sank in the Canal was raised and put on its way within 18 hours because of the efficiency and skill of the technically trained U.S. personnel present in the Canal Zone, a part of the much-abused "14,000" staff figure the Anderson Commission is fond of blackguarding, (*viz.* the American colony whose life-style exacerbates the envy of a relatively poor Panamanian populace). The Commission is fond of the citation of a staff force of 600 to support and operate all services to a sea level canal. In the context of Admiral Gibbs' point, such a work force is absurdly small.

I feel that the statement "There is no indication that the Commission has considered it important to study the possibility of satisfying the requirements of interocean transportation by improving overland modes and routes . . ." stimulated the Honorable Daniel J. Flood to write you about his five-year struggle to prevent the Anderson Commission from exceeding its legislative authority in investigating anything but a sea level canal. Indeed, as long as the rather vaporously-titled Commission appears to have played somewhat loose with its constructing statute (with impunity), there would appear to be no reason why the Commission could not investigate the air transport mode.

There is another point which I wish to clarify. If in diplomatic or administrative retreat, the United States abandons its basic 1903 treaty, there is no reason why Admiral Gibbs' "Southwest Passage" should not be jeopardized, when Mexico, acting analogously and in her own interests, demands renegotiation of the Treaty of Guadalupe Hidalgo. If treaties become "obsolete" by the mere passage of time, the Treaty by which the United States acquired the territory for a "Southwest Passage," being unquestionably the settlement of a colonial conquest, can hardly bear examination.

Finally, the true benefits in both direct income and development increment to the Republic of Panama, of the American-constructed and operated Canal must never be forgotten. This remembrance can be made effective first by improving and building upon the present lake-lock Canal, and secondly, by a firmness both just and politically sound on the part of American representatives.

Captain E. B. Perry, U.S. Navy (Retired)—article is highly imaginative but lacks necessary details. It discusses, in very general terms, a proposed complex traffic problem of moving great weight and bulk overseas on selected routes by ship-rail-ship from the North Atlantic port of New York to one or more ports in the Far East. So long as one sticks to generalities, the sailing is smooth. When it is necessary to get down to troublesome details, however, the going may then become tough. In discussing the proposed "Southwest Passage," an intricate sea-land-sea method of moving many thousands of tons of freight, it is well to consult your abacus.

When considering the Southwest Passage, there are several economic details which must be given some thought. What would be the total time of transit between the loading of a shipper's goods in New York and their receipt by the foreign purchaser? What will be the number of unproductive days required in ports; also the costs to the shippers and the ships? What will be the cost in days and dollars for the land movement of the cargo in its transfer from one seaport to another? This should include the costs of the shore facilities, railway equipment, right-of-way, and the constantly increasing labor costs. All probable costs must be considered if we are to contrast canal transit versus sea-land-sea movement of our cargo. And finally, would the protection of the two ports be less of a problem than the canal protection?

It is axiomatical that the ship is fundamentally the most realistic and economical method of long distance transportation of great weight and bulk on a ton-mile basis. If we are to take advantage of the merits of shipboard transportation from a port on the Atlantic to ports in the Far East, there can be no question as to the need for a canal. The present costs of the operation of our ships is high, but it is reported that our railroads are experiencing similar difficulties.

Considering only the New York to Yokohama suggestion, the article contrasts a sea voyage of some 9,700 miles via the Canal with a composite 7,910 miles via Corpus Christi and San Diego. The distance via sea-land-sea could, very realistically, go up to at least 8,225 miles. The canal voyage, with a 20-knot ship, might be made in about 22 days. The composite voyage could amount to 29 days. A great percentage of operation expenses comes from cargo handling. It is certain that the Southwest Passage would result in increased costs of cargo movement, and that is a step in the wrong direction. Since much of the cargo would be generated in locations to the west of New York, why were Corpus Christi and San Diego selected as transfer points for the cargo? There are existing railroads across the continent and many of them hungry for business. If we must resort to transcontinental rail transportation, why not make the cargo transfer in San Francisco, using existing facilities and saving some 2,400 sea miles? The article may have provided food for thought, but we need a more balanced diet.

Lieutenant Albert H. Robbins, U.S. Navy—The article performs an essential service; it questions our Isthmian fixation. Arthur C. Clarke identifies two classes of planning failures: failures of imagination and failures of nerve. We fear to dream large dreams. Even worse, our dreams are limited by the word images we use. The canal people think in terms of a deep water path; the author visualizes a super-train.

By skillful selection of terms—passage vice the more familiar landbridge—the author obscures the fact that his proposal will not transport ships. In the days of our one-ocean Navy this was one of the more pressing justifications for a canal; it would still be desirable for the *Forrestal*-class carriers.

While emphasizing that trade patterns might shift during canal construction (and presumably while inventing and building the Southwest Passage railroad and deepwater ports) he ignores the distinct possibility that existing ships might be made obsolete during the same period.

Historically, we have been able to assume convenient life spans, economic life cycles, for ships as well as the facilities which serve

them: canals, port facilities, shipyards, dry docks; 50 years for a Great Lakes "boat," 20 years for a freighter, 25 for a cruiser, etc. Last year, we suddenly discovered that the "Big Box," the container and containership, would drive conventional break-bulk ships from the North Atlantic trade, possibly by the mid-1970's. This year, despite a punitive longshoreman's contract, it appears that break-bulk ships are virtually dead, technologically obsolescent. This is a common problem in the aircraft, electronics, and missile industries. It has come as a shock to shipbuilders and operators.

Senator Strom Thurmond recently referred to the air cushion vehicle (ACV) as the magic carpet of the future. He quoted Dr. D. C. MacPhail, of the Canadian National Reserach Council, "The British have concentrated on higher and higher speeds over the water and the U.S. has emphasized military requirements . . . But we [Canadians] have areas where speed isn't so important, where the mere ability to move goods at all is an achievement. Not much work has been done in this field and it might be the answer for Canada."

Actually, most of our development dollars are in the Joint Surface Effect Ship Program Office (JSESPO) basket. Presently, two study contracts ($1.5-million apiece) aim at building testcraft by 1972. These two 100-ton, 80-knot, rigid sidewall testcraft, while interesting, will not revolutionize world trade.

By contrast, the primitive SR.N4s which began commercial operations last year, operate at speeds up to 80 knots, weigh 160-tons fully loaded, and fly above the surface on an 8-foot thick cushion of air. As the author points out, the further north we build our passage, the better.

The Northwest Passage becomes a broad freeway for the pure ACV. The ACV travels as easily, in fact more easily, over ice than water. ACVs have not yet been designed for cold weather, or long range operations. Several (SR.N5, SR.N6, SK–3, and SK–5) have been tested and operated in the far north. An SR.N6 was tested at Churchill, Manitoba. Operating over open water, ice, and snow at temperatures to —41° F., the chief problems noted were in navigation and control.

Our aging Great Lakes fleets constitute one economic market for the ACV. According to Lloyd's, the United States has 286 Great Lakes "boats"—1,892,427 gross tons. Canada has 288 more—1,479,518 gross tons. This seasonal fleet is limited to "navigable" waters and developed ports. Northern ACVs will be able to range far beyond the Lakes—going directly to the mines, the forests, and the wheat fields for cargo, regardless of season. Man-made barriers, buildings, and laws will define the ACV routes.

The existence of vehicles capable of sustained high speeds in the polar and subpolar regions necessitates a critical review of past economic and military decisions. An unescorted ACV, at 59 knots, could shuttle supplies between Little America and New Zealand in two days.

Great circle navigation, over the polar surface will as drastically alter world military posture, as did the Zeppelin raids in world War I, Resupply to Thule, or to our polar research stations will no longer require an icebreaker and supply ship task force. The frozen expanse north of the tree line ceases to be a defense in the same manner that the English Channel ceased to serve as England's moat earlier in the century.

The author acknowledges the supertankers which cannot enter most of the world's harbors, or any of the canals. He mentions the containerships which have made most of the world's ports obsolescent. He ignores the ACV, which will have a far more drastic effect on world trade routes in the next ten years than earlier. In making any long range plans, or investments, we must clear our visions, and we must consider technology.

A SOLDIER SPEAKS FROM VIETNAM

(Mr. McKNEALLY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. McKNEALLY. Mr. Speaker, we have just been besieged with pleas from many citizens of this Nation to withdraw immediately from Vietnam, no matter what the consequences of such action might be.

I, for one, cannot agree that this is the proper action for this Nation to take, and I support our President's efforts in this regard.

As I observed the demonstrations and listened to the cacophony of voices on October 15 last, I wondered what the soldiers in the field thought of all this activity.

What one soldier thinks has just come to my attention, and I would like to commend his thoughts to the Members of this body for their sober consideration.

The article, which follows, was written by Cpl. Joseph M. Carroll, son of Mr. and Mrs. Joseph R. Carroll of New City, N.Y., in the 27th Congressional District which I have the honor to serve. Corporal Carroll, who has been awarded the Army Commendation Medal and Purple Heart, wrote the article in a hospital in Vietnam while recovering from wounds received in action at an advanced firebase along the Cambodian border some 40 miles northwest of Saigon. It appeared in the Rockland County Journal-News, published in Nyack, N.Y.

LOOK HOMEWARD, SOLDIER, FROM VIETNAM FIREBASE

(By Cpl. Joseph M. Carroll)

There is a war being waged, and it is a war of annihilation. And for the first time in the history of this nation, it is a war intended to annihilate the American soldiers fighting it. Somewhere in the course of the war a new philosophy emerged, and this philosophy has broadened in its scope, deepened in its implications until now, in this eighth year of battle, we must realize the philosophy as patent national policy. It has three basic tenets:

The soldier is an enemy.

The war is an atrocity.

The military is an ignominy.

The military establishment has come under fire not only from minority dissidents, as has been the trend in wars past, but by the rank and file of the nation. It is harangued in the press and in the media, in the homes of its citizens and in the very chambers of its Senate. Its recruiters are attacked on campuses, its records, along with the flag of this nation, are burned in the streets; all by citizen-vigilantes who manifest no shame in the open act.

The power of rational thought has been lost in the shuffle, discarded in the emotional upsweep of black and red banners. The ends are not considered, the means have become ends in themselves. The iconoclasts have accepted a doctrine that demands no thought to consequences; a mass hysteria has developed to obviate the necessity of logical thought. Review the expedients and consider the possible end.

1. Abolish ROTC: Lower the quality of the military leader. Make the Army grovel for officers.

2. Hate the military man: Remove the dignity and the respect from the service of one's country. Leave the man an enemy to his own people.

3. Skeletonize appropriations: Inform the generals that the nation is no longer concerned with what they consider absolutely essential to the support of the man in the field. Inform them that they'll have to cut corners, regardless of the consequences.

4. Discredit The Generals: Allow the Senators to criticize the Generals on their own ground, to dictate to the Generals how to run the war.

5. Undermine the spirit of the Soldier: Let him know that the nation for which he is fighting considers him dirt, considers his leaders inept, considers his cause futile.

The situation that has arisen is so absolutely ludicrous that a rational man would question the very foundations of a nation that could permit it. We have accepted the situation for so long that we have taken it in stride, and no longer consider its deathly irreversible implications. The situation, basically stated, is this: We are waging a war to lose.

We have no intention of winning this war, we have no intention of moving forward or backward. The present policy is simply to sit tight in a combat area and hope that the casualty rate of 300 Americans a week will not fluctuate appreciably up or down. This situation can be no more apparent than in the recent testimony of the General who replied in testimony before the Senate Armed Services Committee, "We haven't escalated the war. We've had less battalion-size actions this year than last year. It's them, they're the guys trying to win the war."

A general on the defensive. Nothing does the heart more good. And how, indeed, could he stand under the bombastic accusation that he is actually trying to win the war? This nation has reached the point where it no longer attempts to disguise the enmity it holds for its own military forces. A general, accused of trying to win, and consequently end a war, is forced to cry out in his defense that it is not true, that he wouldn't think of such a betrayal of the nation.

An army is hobbled, its soldiers are disgraced, its appropriations are cut, its officer corps is undermined. Is the enemy capable of inflicting more damage from without than are the American people from within? This nation has left an army in the field, and has given them express instructions to sit and die; its greatest shame being the desire to win the war.

What of the fighting man in Vietnam? What of the man in the rice paddies who realizes that he is the sacrificial lamb of a nation that suddenly "changed its mind?" What of the man who realizes that his purpose is simply to wait until the politicians can find an excuse for withdrawing him, while his numbers drop off in the hundreds each week? And for what purpose? Is there a greater horror than dying without a purpose? This nation has no intention of supporting them. Then why do they continue to do battle? Either they are disbelieving that their people could actually betray them in this manner or are too dedicated to the ideals which the nation has since abandoned to be concerned with the betrayal of that nation. Why has no one informed them that the political situation has taken a turn, and that death is now in vain?

And to be completely consistent in the absurdity, the nation sits at the conference table and attempts to win an "honorable" peace, while the enemy knows full well that they are hobbled and are no longer a serious threat. What bargaining tool can be effective when an enemy knows that you are totally resigned to defeat and withdrawal.

On the conduct of the war itself, Senator Teddy Kennedy has accused the military of mismanaging the war. Hamburger Hill, for example, was not "handled well." And Senator Kennedy is, of course, an authority on

military matters. Who could cast shame upon a man who has the guts and courage to speak out against war-mongering generals? Votes? What have votes to do with truth and justice and good old righteous indignation at ogre generals!

And, of course, it's always good sport to attack a man you have officially bound and gagged. General William Westmoreland, queried as to the validity of Senator Kennedy's statement replied in typically aggressive fashion: "I do not think it proper for me to comment on the opinions of a Senator." And when asked if it were at all proper for the Senator to comment on the tactical situation in the first place, replied, "I do not think it proper for me to comment on what is proper for a Senator to comment on."

We have lived with the irrationality so long that we have accepted it, let it go unchallenged, and it has reached a point where our minds now refuse to question, refuse to sift through the facts and reach a logical conclusion. What better witness to this than the proclaimed end of the agitators? That end, of course, is the total abolition of the Military.

But this, too, can be accepted with the same non-thinking ambiance. For who would be foolish enough, in this day of idealism and love, to suggest that we actually need an Army to protect the nation? Who would be unpatriotic enough to suggest that force is a legitimate instrument of national policy? Who would be naive enough, in this frenzy of peace and charity and good-will, to suggest that we cannot trust our brothers and Russians and the Chinese?

When did we first start to obviate the practical in lieu of the idealistic? When did we first begin to believe that a nation can survive without an Army? When did we first begin to believe that the Communists are brother-lovers? When did this once mighty nation succumb to the belief that a defense can be managed without strength, that a nation can be preserved without might, that ideals which we consider precious can survive in a world where they are attacked on all fronts, and we are left with only our slogans and love beads to protect us?

And then there is the voiceless man in the field. The one who cannot defend himself, for, like General Westmoreland, he is too bound by honor and duty to speak against the will of the people. The military tradition is one of compliance with national demands, not arguments. The soldier is an unwanted cause, a burden, and a drain. He is the man in the field who reads of his own malevolence and ignominy in the papers of his country. He is the man who sits in the rice paddies of the murky Delta and wonders why the B52 strikes have been cut when they are sorely needed. He wonders why his country has forsaken him.

NATIONAL BUSINESS WOMEN'S WEEK

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, this is National Business Women's Week, a time set aside to pay well-deserved tribute to the business and professional women of America. I therefore join the National Federation of Business and Professional Women's Clubs today in saluting the achievements of business and professional women in the communities in the Fifth Congressional District of Michigan and throughout the Nation.

As stated by Mrs. Myra Ruth Harmon, president of the NFBPW, federation members fully recognize the importance of an informed, active electorate and are dedicated to civic responsibility and service. I wish to commend the federation and all those associated with it for their efforts in building a better America. In that connection, I call attention to the federation's national legislative platform and urge careful consideration of it by every Member of this House.

Mr. Speaker, American women have made tremendous strides in the last half century. It is less than 50 years ago that women in this country won the right to vote. Now the potential voter turnout among women exceeds that of the men in this country by 7½ million.

American women also have achieved great economic power and can point to startling accomplishments in a variety of fields of endeavor.

There are many reasons for the men of America to look to their laurels. Women outlive men, and that gives them greater staying power. Official Government figures show that women outnumber men in America, so they have the edge there too.

American women are getting married younger now, which means they start running their men sooner than they used to.

American women have taken an increasingly prominent place in the world of work. Today nearly four out of 10 American women are employed outside the home. In 1920 it was only two out of 10. And today the average working woman is married and 41 years old. In 1920 she was single and 28.

A revolution has taken place among American women, and we men would do well to recognize it.

One of the developments in that revolution is that women today tend to have their last child by the age of 30. This means that by the time the youngest child is in school, a mother may look forward to 30 or 35 more active years. Much of that time can be spent in the business and professional world, in politics, and in civic endeavor.

I am very happy to find women getting the place they deserve in the world of work, in the Government, and in the political sphere.

Our whole society today calls for women to play a significant role in nearly every way—not just as wives and mothers but intellectually and politically. And so I am pleased that President Nixon has named 118 women to positions in the Federal Government and related posts.

These appointees are examples of the new American woman, the kind of woman who has made the National Federation of Business and Professional Women an organization of which all its members can be terribly proud.

So it is that today I toss a bouquet to the National Federation of Business and Professional Women and express the wish that the federation will grow ever stronger and will continue its fine efforts on behalf of community and national betterment.

VIETNAM

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, it is my firm conviction that a substantial majority of the American people support President Nixon's policies aimed at ending the war in Vietnam. I therefore found it disturbing that the Nation's press sweepingly spoke of "millions" of Americans as taking part in the recent Vietnam moratorium. Since the October 15 moratorium I have seen more sober estimates of the number of Americans participating in "M-Day," figures like 500,000, for instance. Whatever the actual number, I repeat my earlier assertion that a sizable majority of Americans support their President's efforts to achieve peace with honor in Vietnam.

Not all of the writers and commentators speaking of M-Day were swept up in the emotional tide of the moment. Some editorially voiced grave misgivings about this exercise in crowd diplomacy. One of these was Philip Clarke of the Mutual Broadcasting System, who delivered a commentary entitled, "Vietnam: A Case for the Silent Majority." While I do not necessarily agree with every point made by Mr. Clarke, I feel that his viewpoint adds balance to the current Vietnam debate. I therefore invite my colleagues' attention to the Clarke commentary and place it in the RECORD at this point.

VIETNAM: A CASE FOR THE SILENT MAJORITY

(By Philip Clarke)

In coming weeks, the world will be witness to one of history's strangest and most disturbing phenomena: thousands of U.S. citizens participating in anti-Vietnam war demonstrations directed against a U.S. Administration that is doing everything within reason to end that war.

Planned for October 15th are protests on campuses, in the streets and from door-to-door. A number of Congressmen even plan an all-night anti-Vietnam filibuster. Organizers are calling it "M-Day"—for moratorium against war.

With supreme irony, the demonstrations ignore the Communist aggressors who started the war and now shun peace. They are aimed instead at bringing irresistible pressure on President Nixon to order the precipitate withdrawal of all U.S. forces from Vietnam—unilaterally.

The consequence would be not the peace, for which all men of reason aspire, but surrender—the surrender of free South Vietnam to the Communists.

As might be expected, the October 15th demonstrations—and similar "peace" marches and rallies in November and December—are in large part organized and led by a noisy minority. Included are the flag-burners, the draft-board bombers, the White House picketers, the "better-Red-than-dead" claque. Their names and their tactics are familiar. The tragedy is that thousands of idealistic but susceptible young Americans have been persuaded to join with these professional dissenters in the name of peace.

More alarming yet, many members of Congress, educators and civic leaders—who should know better—have pledged their active support to the demonstrations. Some simply have been taken in. Others believe it is "good politics" or the "in-thing."

In this they are wrong—dead wrong.

As naive or well-meaning as most of them are, the anti-Vietnam demonstrators are playing fast and loose with the interests of our nation. And they are parading directly into the hands of an enemy who strives by whatever means to weaken our security and

destroy our position of leadership in the Free World.

For the past eight years, this correspondent regularly has monitored broadcasts from Moscow, Peking, Hanoi and other Communist capitals as part of a weekly analysis of alien propaganda. Almost every anti-Vietnam demonstration, rally, teach-in, war crimes "trial" or whathaveyou is played to the hilt, whether in Tokyo, Toronto or Timbuctu. Protests in the U.S. get special treatment.

After one recent anti-Vietnam rally in the U.S., Radio Moscow broadcast a message of congratulations from the National Liberation Front, the political arm of the Vietcong. It said, and I quote: "we thank our progressive-minded compatriots in America for rallying support to our side and against the dirty imperialist aggressors in Washington. Your activities for peace have given great encouragement to our struggle for the liberation of Vietnam. Together we shall win." Unquote.

Communists around the world are now cheering even more loudly over the forthcoming demonstrations in the U.S. Why? Because they couldn't come at a better time—for the Communists. Having claimed credit for speeding the exit of President Johnson, they now sense an opportunity to pull the rug from under President Nixon—before he can achieve peace without surrender in Vietnam.

Thwarted in their attempt to take over South Vietnam by military force, the Communists are counting on a massive psychological offensive to confuse, weaken and divide U.S. public opinion. Just as they once boasted of defeating the French not at Dienbienphu but in Paris, the Communists now predict victory in Washington.

Cunningly, the Communist propagandists play on America's revulsion against war and impatience for peace. Large numbers of young Americans are led to believe that the struggle in South Vietnam is unjust and immoral, that a majority of the 17 million South Vietnamese really favor the Vietcong, and that only the corrupt, repressive regime in Saigon—propped up by Washington—prevents peace and happiness for all.

How cynically distorted is this picture. By every objective account, the vast majority of South Vietnamese abhor the Vietcong and want only to be left alone to live in peace. What territory has come under Communist control has been subjugated through systematic terror and brutality, including the kidnaping and slaughter of hundreds of village leaders and others who failed to "cooperate."

In the ancient capital, Hue, alone, more than 1,000 men, women and children were summarily executed and buried—some still alive—during the treacherous Tet offensive of February, 1968. Their only "crime:" preferring freedom to Communism.

One can only imagine the bloodbath that would result if all South Vietnam suddenly were abandoned to the tender mercies of the Vietcong and the North Vietnamese Communists.

Against the argument that the present Saigon government is corrupt and undemocratic, it must be asked: would the Communist alternative be better? Would a Communist regime risk holding elections in the midst of a war for survival, as the Saigon government did two years ago? The Communists boycotted those elections, and they have ignored proposals for new elections under strict international supervision. They know that in any fair contest of popular will, they would lose and lose badly.

For all its shortcomings, the Saigon government, by impartial account, is making slow but steady progress toward valid democracy. And this in a country where scarcely fifteen years ago few had even heard the word democracy.

Yet, some critics argue that if the Communists won't accept free elections, why doesn't the U.S. force the Saigon government to accept a coalition with the Communists? The answer is simple: the Communists don't want a coalition with the Saigon government. They're holding out for the whole piece of cake. Further, by what possible right can the U.S. arbitrarily dictate to any other government, friend or foe, that it open its doors to an enemy that avows not to co-exist but to conquer? This would be tantamount to asking Saigon to seal its own doom. For never in history has freedom survived in coalition with tyranny.

For some Americans in high places, the entire Vietnam dilemma is simply too much. Several members of Congress have gone so far as to call for total U.S. troop withdrawal right away, no matter what happens. At least two Senators are demanding that Saigon undertake a long list of political "reforms" within 60 days on pain of losing all U.S. aid, both military and economic.

While such ill-considered and irresponsible proposals are being voiced, is it any wonder that Hanoi sits tight in Paris and prolongs the war in South Vietnam?

Still, some Americans argue: what business is it of ours? Why should the U.S. spend 40,000 lives and billions of dollars to save a few million peasants in a country barely larger than Missouri?

A glance at the map will furnish one answer. South Vietnam is at the heart of Southeast Asia. If the U.S. should abandon it, how long could South Vietnam's neighbors resist Communist conquest? Laos already is under siege. Communist insurrectionists are nibbling away at the fringes of Thailand. Cambodia is a conduit for North Vietnamese troops and supplies. And farther South lies the tempting prize of populous, resources-rich Indonesia which only recently shook off a Communist attempt at take-over.

There are other potential targets: Malaysia, South Korea, the Philippines. Could they hold out if the U.S. should withdraw from Southeast Asia? In time, Japan would feel obliged to make a deal with Peking. And the fate of Formosa—Free China—would be in immediate jeopardy.

The U.S. could withdraw, yes—but to where? In this age of long-range nuclear missiles, can any one corner of the world be considered secure if aggression is rewarded in another? Haven't we learned from two disastrous world wars that isolation is a snare, appeasement a delusion?

And what of our commitments to freedom elsewhere in the world? If we should decide that South Vietnam is not worth defending, then why bother about South Korea, or West Berlin, or anywhere else in the world coveted by the Communists? In today's precarious balance of terror, would the peace of the world really be served if the U.S. should desert South Vietnam?

The answers are obvious.

It can be said that South Vietnam is but a small part of the picture. Yet it is a vital part. The Communist rulers in Moscow and Peking are watching and waiting for the outcome in Vietnam. If we give in and get out, the Soviet and Red Chinese positions surely would harden. President Nixon's efforts to move from an era of confrontation to an era of negotiation would be set back, perhaps irreversibly. At the conference table, the U.S. would be at a definite disadvantage, strategically and pyschologically.

Not least of all is the question of America's spiritual and moral purpose. If history has taught one lesson, it is that when a nation loses faith in itself, it forfeits the future.

Will this nation of ours, which saved Western Europe, preserved freedom in much of the rest of the world, and which has carried mankind to the moon, now in frustration give way to a handful of despots in Hanoi? Can we not summon the human and natural resources to meet the challenge?

In the agonizing trial of Vietnam, America's faith in itself and its leaders is being tested as never before. This test must be met. The sacrifice of forty thousand American lives cannot be written off in despair and defeat.

In President Nixon, the U.S. and the Free World has a leader who has pledged not to buckle, not to yield on the lone principle for which we fight in South Vietnam: the right of the people there freely to decide their own future. And the President has served resolute notice that he will not be swayed from this principle by the clamor of the noisy minority.

With good reason, President Nixon has appealed for united support in his ceaseless effort to bring peace in Vietnam. Not a peace of appeasement, as at Munich, but an enduring peace that is in the interest of all parties.

There are hopeful signs. As U.S. troops gradually withdraw, more and more South Vietnamese soldiers are being trained, equipped and assigned to the defense of their own country. (It took the British ten long years to enable the Malaysians to take over their own defense). And, although it is yet too early to assess the full meaning, there has been a marked drop in the level of fighting and in U.S. casualties. The way of reason may at last be opening.

In view of these possibly crucial developments, the Republican leader in the Senate—Hugh Scott—has asked, appropriately, for a two-month moratorium in domestic attacks on President Nixon's Vietnam policy. The President deserves no less; the national interest demands no less. In a democracy such as ours, while honest dissent can be constructive, thoughtless dissent can divide and destroy.

Genuine peace may yet be some distance away. But the greater our unity, the sooner it will be reached. Only when the enemy knows he cannot wait us out will he then agree to terms—and only then.

That is why October 15th is so important.

That is why the voice of the quiet majority must be heard over the noisy minority's cry for peace at an price.

That is why every concerned citizen must speak out now in support of the President's efforts for peace with freedom.

DEMONSTRATIONS IN CHICAGO

(Mr. ANNUNZIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, Old St. Mary's Church, 900 South Wabash Avenue, Chicago, Ill., is located in the Seventh Congressional District which I have the honor to represent. The Paulist Fathers at this fine church have been serving my community with dedication and devotion for over 100 years.

On Sunday, October 19, an article in their church bulletin condemned irresponsible and irrational wreckers who demonstrated in Chicago last week. The church bulletin calls them "sickeys," vandals, creeps, and weirdos, and their demonstration in Chicago last week again proved that this armed invasion of our city was preconceived and planned by outsiders. These were the same people who invaded our city during the Democratic Convention last year. During the convention, the distinguished mayor of my city, Hon. Richard J. Daley, condemned these outsiders for infiltrating our city, and the renewed efforts of the

demonstrators during the last couple of weeks have proven beyond any reasonable doubt that our television and radio reporters and commentators were wrong. The mayor was right then, and he is right now.

I commend and congratulate the pastor of St. Mary's Church, the Reverend James Cunningham, and all of the priests at Old St. Mary's Church, the Paulist Fathers, for forthrightly identifying in their church bulletin the vicious disease that is infecting America today.

More of our so-called respectable citizens ought to stand up and be counted in the fight against this disease. We can no longer tolerate the "sickeys" who are bent on destroying our cities with their hoodlum tactics, their violence and their willful breaking of the law.

Mr. Speaker, I ask my colleagues to read carefully the article from the church bulletin, which I am including at this point in the CONGRESSIONAL RECORD. I would also like to call to the attention of my colleagues a letter I received from Roger G. Seaman, commander of Admiral Benson Post 83, and national judge advocate of the Catholic War Veterans of the United States of America, which follows.

I want to point out to my colleagues that Commander Seaman reiterates and supports the thoughts expressed in Old St. Mary's Church Bulletin when he states that the demonstrations in Chicago are tantamount to treason, and that Americans must awaken from their lethargy if our cities and our country are to be saved from these outsiders who are bent on destroying the fundamental rights and liberties guaranteed by our Founding Fathers in the Bill of Rights and the Constitution of the United States.

The article from Old St. Mary's Church Bulletin, and Commander Seaman's letter follow:

A COUNTERPUNCHER SELDOM WINS

In the boxing profession we have had a few good counter punchers, but never any champions of which I have knowledge. The champions were usually aggressive, they did not wait for the opponent to come to them, they went after him. Counter punching is necessary but no champion ever made a career of it. This past week, with the invasion of the "sickeys" we became counter punchers. These were not only vandals, irresponsible and irrational wreckers, creeps and weirdos, they were "sickeys." We could see in our hesitating reaction to them the influence of two national broadcasting chains and their bright old announcers who reported on the Democratic Convention with not a few staged activities. At that time when the danger was imminent the police moved in to contain those causing the peril to life and property. They acted. The reaction across the nation was unjust and normal, probably, to what people saw without any knowledge of the situation, or of what was taking place.

This time the vandals moved in with fanfare and publicity. They had announced their intention—to destroy. They gathered in various places, every move of the hard core radicals was known. Yet for some reason shackles were put on the police. They did not act—they reacted.

They tried by peaceful means to contain wreckers armed with clubs, pipes, steelbars . . . who came prepared to fight with their helmets on, ambulances on call, bail-bond people waiting at the police headquarters. The police did not move when the danger to life and property was mounting. They reacted only after the goon squads had "gone ape," the invaders were loose on the street and injured policemen and at least one public official, near death, we are told, as they bore the brunt of the vicious attack. Then police were fighting to defend their lives as well as to keep order. But the move was too late—it was a reaction, a counter punch. Why? These invaders were hardy, rugged revolutionaries—possibly a few of them students yet this was an armed invasion of a peaceful city. Why were the police restrained. We are getting a little tired of being pushed around by "sickeys" who can disrupt a whole city for a week. Is this to be the picture of American law enforcement in the future? Wait—wait until it is too late and property and lives destroyed, How much did this little caper cost the city and state—possibly close to half a million dollars? Are the "sickeys" paying the bill?

We counter punched in Korea and in Vietnam. We reacted. We are in the position of a commander who knows where his enemy is, what he is doing and saying, what he is going to do and in the dilemma of being unable to use preventive action when the situation can be contained. He must wait until the enemy attacks. That is irrational warfare. Yet it seems to be our mood. We must now put the pieces of Chicago back together because we could not prevent less than 500 hoodlums from tearing the city apart. We have reached a new national low when we so shackle law enforcement officials so that they are unable to do their job, to defend us. The Supreme Court and its many laws favoring the criminal has seriously hampered sound police work and law enforcement. Why is it that we give the arsonist, the neo-revolutionary the edge in this fight for a peaceful city? What is the answer?

One certain answer is the need all of us have to support the law enforcement bodies. If there was ever a time that we need a sound police department it is now. Look at what happened in Montreal when the police went on strike. Banks robbed, people assaulted, anarchy loosed. The sight of one police cruiser could have stopped much of it. So if we say a few unhappy words when we read Vatican Two statement "a sense of the dignity of the human person has been impressing itself more and more deeply on the consciousness of contemporary man. And the demand is increasingly made that men should act on their own judgment, enjoying and making use of responsible freedom, not driven by coercion but motivated by a sense of duty." So if I say Pardon me while I laugh as I look over the pictures I have seen of the "responsible" citizenry rampaging down the street with chains and iron bars. Or I feel strangely out of it listening to a young girl speaking to the crowd of radicals telling them that now was the time to put themselves on the line—for destruction. Men react to two stimuli—fear of punishment, hope of reward. They need coercion as many are irresponsible . . . they need fear of punishment.

We see the folly of waiting for the attack. Businessmen, guests, residents beaten, business places wrecked, property destroyed, cars overturned and lives in danger. Surely there is sufficient skill, knowledge and ability in our law enforcement officers to handle the problems. Let them do it. Take the handcuffs off them and put them on the criminals where they belong. Let us not put the lives of good police officers in jeopardy as they must wait for a vicious assailant to whom, up to now, we have given every advantage, if we end up as counter punchers we will be destroyed.

Perhaps it is true that our democracy cannot last. At a time when the President needs every bit of support to negotiate a peace of some kind in Vietnam the rug is pulled out from under him and the Paris negotiators by voices all over the country demanding a pull-out immediately. He, better than anyone understands the need of getting out, he, better than anyone knows the devious quality of our opposite numbers at the peace table and the malice which pervades all communist countries so far as the United States is concerned. To get out with honor is necessary—to save at least a shred of our national integrity seems important, to save our commitment to a nation of people who have needed us is worthy of our every effort. Yet, when the President is trying to accomplish these ends he goes into the category of law enforcement officers—no support.

It is imperative in a city like Chicago that the police department and all law enforcement agencies have our support. If there is imminent danger let them contain it regardless of what Walter or Chet may say. They have the intelligence, the knowledge, the ability to do their job of crime prevention. Let them prevent it. Give them your support. Otherwise we will end up as counter punchers and like all nice guys who come in last, we may come in dead.

ADMIRAL BENSON POST, CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA,
Chicago, Ill., October 14, 1969.

DEAR MEMBERS AND FRIENDS OF CWV: On October 11, 1969 in Washington D.C., your National Board of Directors held their regular meeting. National Chaplain, Reverend Floyd J. Marleau of New York City, displayed in his report a copy of the literature which was passed out on the street corners of his city. As each person was solicited to come to Chicago, he was promised free transportation and expenses. A copy is enclosed. I suggest you turn to it and read it now.

Is this the kind of demonstration which is guaranteed by our Constitution? I think not! This is an act of *treason*. They are highly organized and financed, despite their disheveled appearance. The solution of the problems of the Blacks and the war in Viet Nam are only red herrings to justify their true purpose. Their purpose is clearly spelled out in the last paragraph of their "Call to Arms."

"*We* are living in the guts of the monster. Let's destroy it from the inside as the third world destroys it from the outside. S.D.S. and other people are going to Chicago, October 8–11 to bring the war home. And to start building our Red Army. Join us."

Unlike the past Benedict Arnolds of the United States, these traitors announce their treason, promise violence and then proceed to travel from all over the country to fulfill their threats. Some commentators call them idiots. I am not sure who is what!

Returning to Chicago late Saturday, I was shocked and saddened by the criminal attack on my dear friend Dick Elrod, and, upon reflection, I wondered if the pain and suffering of Dick and his fine family would wake up us Americans from our lethargy, and recognize this serious threat to our nation.

The attack on Dick Elrod and our police was just as much an attack on each one of us and on our families.

What are we going to do about this? Are we perhaps considering the political consequences of a public statement, and the security of silence? We have the constitutional authority to stop them. Let's use it.

Treason is the virus that leads to the death of a nation.

Think about it!

Yours in CWV,

ROGER G. SEAMAN,
Commander, National Judge Advocate.

YOU ARE LIVING INSIDE THE MONSTER

That monster is this racist, imperialist country. Everyday more and more black, brown, and third world people are murdered as the fat cats who run America fill their pockets and bank accounts on the blood and

sweat of oppressed people. But dig it, oppressed people throughout the world are moving on U.S. pig power. And they are winning!

As the blacks and Vietnamese succeed in destroying this racist and imperialist monster we whites who get crumbs from the system are put up against the wall. We face higher taxes, inflation, speed-up, and the sure knowledge that our brothers, or boyfriends may be shipped off to Vietnam and shipped home in a box. We are forced to go to prison called schools, to train for———jobs and to learn to accept boredom and put-down we will face for the rest of our lives.

White people have got to make a choice. There's a war going on. Right now. All over. Either we side with the bosses, their pigs, and their teachers, and go down with their crumbling system, or we fight along with the Viet Cong and black people and be part of the solution. The hundreds of G.I. rebels, the white kids in Columbus, Ohio who fought side-by-side with the blacks this summer, the S.D.S. women who tore up Pittsburgh earlier this month . . . they have already made that choice. They and the rest of us must build an effective white fighting force that joins with the Viet Cong and blacks in their war of liberation.

We are living in the guts of the monster. Let's destroy it from inside as the third world destroys it from outside.

S.D.S. and other people are going to Chicago, October 8–11 to bring the war home. And to start building our Red Army. Join us.

Chicago, October 8–11.

NEW YORK CITY, S.D.S.

TRIBUTE TO THE NATIONAL FEDERATION OF BUSINESS AND PROFESSIONAL WOMEN'S CLUBS, INC.

(Mr. ANNUNZIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, for the past 40 years one week in each year has been set aside to pay tribute to the National Federation of Business and Professional Women's Clubs, Inc., emphasizing the responsibilities and achievements of women in business and professions.

This year the week of October 19 to 25 has been set aside to afford the local clubs and State federations of the Business and Professional Women's Clubs, Inc., the opportunity to focus the attention of their communities on the great contributions made by women in the world today and to honor the outstanding achievements of women in all phases of economic, social, cultural, business, and professional life.

Of the more than 3,800 business and professional women's clubs in our country, 170 clubs, with a membership of over 11,000 women are in the State of Illinois. Through my association with some of the members of the business and professional women's clubs in my State and district, I have become familiar with the outstanding record of legislative proposals the National Federation of Business and Professional Women's Clubs, Inc., have sponsored or supported in the last 50 years.

I am pleased to see that action item No. 1 in their 1969 national legislative platform is a resolution to support legislation that I introduced on May 13, 1969—House Joint Resolution 715—to amend the Constitution of the United States to provide that equality of rights under the law shall not be denied or abridged on account of sex.

The following is an outline of legislative proposals supported by the National Federation of Business and Professional Women's Clubs, Inc., for the period of 1919 to 1969, and its national legislative platform adopted by the national convention July 20 to 24, St. Louis, Mo.:

THE NATIONAL FEDERATION OF BUSINESS AND PROFESSIONAL WOMEN'S CLUBS, INC. OUTLINE HITORY OF LEGISLATIVE PROPOSALS FOR 50 YEARS, 1919–69

1919–20—Successfully endorsed permanent establishment of Women's Bureau; continuation Children's Bureau; creation Federal Employment Service.

1921—Successfully supported the Sheppard-Towner Act giving funds for maternal and child welfare and the Cable Act (and amendments till 1934) granting married women citizenship status independent of their husbands.

1923—Supported the amendment to the Smith-Hughes Act placing Home Economics in vocational training which passed as well as the Bell Act creating the National Federal Department of Social Hygiene. Also sponsored the first legislative tax bill ever introduced in Congress by women—to increase personal exemption for single persons—still on the agenda today. Began long and dedicated support for federal aid to education without federal control (goal more than achieved in legislation aiding education since 1958). Endorsed Child Labor Amendment to protect children—failed to pass in the states but gradually enacted by most states and the federal government in other laws.

1937—Secured repeal of a section of the National Economy Act which provided in labor reductions for dismissal of an employed wife (govt.) of a government employee. Sponsored Equal Rights Amendment. Urged states to work for equal jury rights for men and women.

1940—Urged amendment (later achieved) of social security laws to provide for dependent widowers and children under 18.

1942—Began urging legislation to permit women jurors to serve on federal courts (fully achieved 26 years later—Federal Jury Selection Act).

1944—Successfully supported legislation to establish the Women's Armed Services on a permanent basis with the same rank and pay as men. (The final step was achieved in 1967 when President Johnson signed bill giving women in the armed services equal opportunity promotion.)

1950—Allowance of an income tax reduction to an employed person for costs of care of dependent because of said employment (now part of the Internal Revenue Code).

1956—Successfully supported the double income tax exemption for taxpayers over 65 and blind. Opposed lower retirement age for women. This passed, but in 1961 men were enabled to take the lower age of 62 also.

1963—Support for equal pay for equal work goes back to 1920. Since the 1940's it had been a special legislative effort. Passed in 1963.

1963–67—Originated the idea for and helped organize State Status of Women Commissions. All 50 states plus the District of Columbia, the Virgin Islands, Puerto Rico and two municipalities had created these special groups to study problems of women by late 1967.

1964—The Civil Rights Act of that year contained a Title VII which prohibits employment discrimination of all kinds, including sex. The Equal Employment Opportunity Commission was set up to enforce this provision.

1965—Section 165 of the Revised Statutes, allowing discrimination against women in government positions, was repealed after strenuous efforts by BPW.

1967—Women in Armed Services bill (See 1944). BPW urged and succeeded in getting the word "sex" added to the discriminations prohibited by the federal government when President Johnson issued Executive Order 11375 prohibiting discrimination against women in government or by government contractors. The Office of Federal Contract Compliance overseas compliance with this order by all the agencies of the government. Civil Service Commission required each agency to establish "a positive, continuing program to develop and promote equal opportunity without regard to sex."

1968—BPW's much desired legislative goal was achieved with passage of the Federal Jury Selection and Service Act of 1968, requiring selection of federal jurors without consideration to race, color, religion, sex, etc.

NATIONAL LEGISLATIVE PLATFORM ADOPTED BY THE NATIONAL CONVENTION JULY 20–24, 1969, ST. LOUIS, MO.

ACTION ITEMS

Item 1. Constitutional Amendment: Support legislation to amend the Constitution of the United States to provide that equality of rights under the law shall not be denied or abridged on account of sex.

Item 2. Actively work for pending legislation providing for: (a) a broadened head-of-household benefit under the Internal Revenue Code: (b) increased personal exemption and credit for dependents under the Internal Revenue Code; and (c) a more equitable distribution of the tax burden.

Item 3. Propose and support legislation to provide: (a) uniform laws and regulations for men and women as to working hours, working conditions, rates of pay, equal employment, including retirement for age; (b) equal treatment for working men and women in the area of survivor and retirement benefits; and (c) increased child care deduction under the Internal Revenue Code.

Item 4. Propose and support state legislation to provide for uniform jury service and uniform qualifications in the selection of men and women to serve on grand or petit juries in any court.

Item 5. Propose and support legislation to bring about more effective crime control and law enforcement.

POLICY ITEM

Support measures within the framework of the Constitution of the United States that promote peace and strengthen national security and make more effective the United Nations and such other international organizations of which the United States is a participant, without relinquishment of our basic freedoms.

Special note is called to the United Nations Convention pending before the United States Senate on the political rights of women and to the longstanding support for ratification of this convention by the Federation.

This legislation the National Federation of Business and Professional Women's Clubs, Inc. supported was not only beneficial to the members of the Business and Professional Women's Clubs, but to all of the citizens of America, and has helped to make our Nation a better place in which to live and raise our families.

The Business and Professional Women's Clubs, Inc. are also to be commended for initiating various programs of instruction, example and encouragement for girls and young women, such as the Young Career Women program, Nike Clubs, for high school juniors and seniors, and the Samothrace Clubs for college undergraduates. In this day when one reads of all the strife and turmoil among some of our young people, it is gratifying to see a group like the Business and Professional Women's Clubs, Inc. giving their

time and efforts to provide good leadership and guidance to the young people of America.

I wish to join the Members and the many friends in recognizing and commending the Business and Professional Women's Clubs, Inc. of the United States of America for their outstanding achievements, and express my sincere best wishes for many more years of successful achievement.

HURRICANE SERVICE TYPIFIES CREDIT UNION SPIRIT

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, each month the number of credit unions in this country increases. In fact, there are about 500 more credit unions in operation at this time than there were at the same date last year.

One of the major reasons why the number of credit unions is expanding so rapidly is that these fine institutions are devoted to service and to helping people rather than chasing a fast buck. The lengths to which credit unions will go to help their members is clearly shown in the hurricane damaged area of Biloxi-Gulfport, Miss.

A press release issued by CUNA International, the worldwide credit union association, describes what credit unions in the Biloxi-Gulfport area are doing to help storm victims:

WHO EVER HEARD OF WET MONEY?

GULFPORT, MISS.—You may have heard of "hot" money or "sound" money, but "wet" money? Yet many of the Biloxi-Gulfport residents were mighty glad they did!

The "wet" money, more than $20,000 of it, got soggy when six feet of water ravaged through the Pascagoula office of the Ingalls Employees Credit Union during Camille's rampages.

Two days later the money was being used to take up where Red Cross, the Salvation Army, and other relief services left off . . . in helping the 10,000 members of the credit union with their emergency needs. The credit union would have been open quicker except for the jumbled furniture which had to be picked up, the water-swollen drawers which had to be crowbarred open, and the several feet of mud in the office which had to be hosed out. As it was, the $7 million Ingalls Credit Union—which normally handles all its transactions via electronic data processing—operated by hand for 10 days without power, lights or water in the building! Eventually, the credit union managed to get one adding machine going by running a makeshift wire from a company guard station down the road.

Credit Union Manager W. T. Avara, Jr., recalls that many dazed members were overjoyed to receive the soggy cash loans in a time when personal checks were worthless.

One of the most grateful was a Biloxi man who had lost everything . . . his house, his car and all the furnishings. With a wife and 10 children, he couldn't find a house anywhere to move into . . . until the Ingalls company offered him the use of a house they owned. Then the credit union lent him $200 to buy groceries and to set up housekeeping.

Despite their overwhelming losses, many of the Ingalls members are showing unquenchable spirit, according to Avara. One young man whose house has been pulverized came in to borrow $250 to buy a gas-powered saw. He figured he could clean the debris off his own property and then maybe earn back some of what he'd lost by helping other victims clear their property.

Other credit union members are still borrowing for such necessities as cars, roof repairs, jacking up walls, and buying clothing—in short, anything that insurance wouldn't cover at all or in full.

"We aren't questioning these members very much at all about their financial status," says Avara. "It isn't really necessary since we know most of them anyway. Besides, we want to help them as much as we can without overburdening them with debt," Avara cautioned.

In the days immediately following the storm, the Ingalls Credit Union also opened up an emergency office in a fire station in Biloxi to take care of members who needed to draw on their savings or make loans but had no means of transportation.

Although Ingalls is one of the largest credit unions in the area, there are 20 more of these member-owned financial cooperatives which are trying equally to help their members.

One of them is the Gulfport VA Federal Credit Union serving almost 700 employees of the beach shore hospital. Before the storm, Manager Julia D. Reed figured the credit union office was in no danger, basing her estimates on the 1947 hurricane as did almost everybody else on the Gulf Coast. After the storm, it took her several hours to work her way through the debris-choked streets. Luckily, the credit union was located in the back of the building, although three feet of water had taken its toll. If the credit union had moved across the hall into the front of the building, as had been considered, all the records would have been swept away. As it was, water gushed out of the safe when it was opened and cash sheets had floated all over the office.

Mrs. Reed loaded the water-logged records into her car and turned the vehicle into a mobile credit union office for the next two days. She dried the records out as best she could on what was left of her patio using 200 bricks as weights.

To take care of members' needs, Mrs. Reed and her staff sometimes toiled 14–16 hours a day, seven days a week, doing bookwork as well as staying open long after normal hours. In three weeks, the credit union occupied four emergency offices.

Other credit unions, unscarred themselves, are also pitching in to get people back on their feet. Keesler (Air Force Base) Credit Union, the largest in the stricken area with 20,000 members and $8 million in assets, is doing its part by making special hurricane loans, and liberal car loans.

The hurricane loans are small emergency loans made with only a signature as security. If a member needs it, he gets it regardless of whether he has other signature loans, according to Manager Bob Wilson.

On the car loans, Wilson reports that sometimes Keesler Credit Union is lending more than 100% just so the member can get some badly needed transportation. This could easily be necessary when a depreciated insurance check doesn't completely pay off a car loan. Then the credit union would lend the member enough money to pay off his old debt to the credit union as well as to buy a new car. In one day alone, Keesler had $91,000 in car loans paid off by insurance checks although, of course, much of the money immediately went out again in new loans.

Not all of the Gulf area credit unions are in a position to give their members a lot of help, though. Notable, is the Pass Christian Federal Credit Union which serves the poorer residents in storm-lashed Pass Christian. Virtually, all of its funds are out in loans to members, and what with the disaster, the volunteers who operate the credit union have had little time to devote to promoting more savings. Currently, the credit union is seeking administrative funding from the Office of Economic Opportunity. If this funding goes through, the credit union can afford to hire a fulltime manager to speed up the growth of the self-help funds so needed to cope with the disaster.

The president of this credit union is well known to Pass Christian people as the man who plucked many of the old and infirm from Camille's foaming jaws on the night of the hurricane. He is Father Phillip J. McLoone, S.S.J., pastor of Our Mother of Mercy Catholic Church. According to Rev. McLoone, faith in God and several shots of whiskey helped him get through that harrowing night. Rev. McLoone and Doyle Moffett, chairman of the credit union's supervisory committee, searched through the howling, pitch-black night and using the priest's car, drove many stranded people to safer shelter.

But despite the efforts of hardworking credit unions and others, there is no doubt that the people of the Mississippi Gulf Coast are going to need all the help they can get! Some people believe that many of the hurricane victims are just beginning to come out of deep shock, and that loan needs will increase for some time. Although Uncle Sam has already advanced $3 million to help clean up the mess and the SBA reports $5.5 million in loan applications, this is only a small beginning.

One member at Keesler expresses the plight of many Mississippians. His home was swept away by rising water, which isn't insured under most policies. He was making $140 a month payments to pay off his original mortgage and a Title I FHA Home Improvement Loan at the credit union. "I can't afford to make any higher payments than that," he said shaking his head. "How can I take on any more loans, no matter how reasonable?"

Mr. Speaker, the actions of these credit unions show why the credit unions have adopted the motto; "Not for profit, not for charity—but for service."

ADMINISTRATION'S MARINE SCIENCE INITIATIVES

(Mr. ANDERSON of Illinois asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANDERSON of Illinois. Mr. Speaker, I wish to commend the administration on the five bold initiatives it is proposing in connection with our Nation's marine science policy. Most of these recommendations are taken from the report of the Commission on Marine Science, Engineering, and Resources, "Our Nation and the Sea," which was released in January of this year.

The Marine Science Commission gave a great deal of attention in its report to the problems of our coastal areas. Quoting from their report:

> The coastal zone, where the rivers and shores join the sea and the Great Lakes, presents some of the most urgent environmental problems and the most immediate and tangible opportunities for improvement.

I was therefore pleased to note that three of the administration's five points relate directly to problems of the coastal zone and the Great Lakes:

First. Coastal zone management: A new Federal policy is being proposed to promote the rational development of coastal areas and the Great Lakes which will include a grant program to aid the States in planning and managing activities along the coast.

Second. Establishment of coastal laboratories: To assist in coastal environmental research, coastal marine laboratories will be established.

Third. Lake restoration: In order to guide the restoration of the Great Lakes, a pilot technological study will be made of lake pollution.

In addition to these, the administration is proposing active American involvement in the International Decade of Ocean Exploration, and Arctic Environmental Research.

Mr. Speaker, while these proposals are far reaching and significant, I think it is important to point out that this is not the extent of the administration's marine science program; it is just a first step. In the release issued from the Office of the Vice President it is noted that—

The Vice President reported five areas that the Administration has selected for immediate special emphasis in the next fiscal year pending development of a long-term program by the Administration and the Congress.

The release goes on to state that—

The President's Advisory Council on Executive Organization, headed by Roy Ash, is now evaluating the Commission's recommendation to create a new National Oceanic and Atmospheric Agency.

I feel it is necessary to emphasize that the immediate five-point program being proposed is in no way meant as a substitute for a long-range national program for the oceans, nor has the possibility of reorganization along the lines of a National Oceanic and Atmospheric Agency been ruled out by the administration. As one who has testified in favor of NOAA I am hopeful that the administration will include this in its executive reorganization plans. I feel quite strongly that such an agency is vital to the success of an overall national ocean policy.

At this point in the RECORD I include certain extraneous material relating to the administration's five-point marine science program and the ocean potential. The articles follow:

[From the Washington Post, Oct. 19, 1969]

WHITE HOUSE ASKS $200 MILLION TO INCREASE MARINE RESEARCH

(By Thomas O'Toole)

In a major science policy move, the Nixon administration yesterday proposed to strengthen the Nation's marine research by increasing sea study spending by more than $200 million in the next five years.

The increases cover five areas of research and break fresh ground in two places, by proposing a grant-in-aid program to help states manage their coastlines and a huge pilot study of lake water pollution to guide restoration of the Great Lakes.

The funding step-up also calls for an increase in the number of oceanographic laboratories on the Atlantic, Pacific and Gulf coasts, an acceleration of research in the Arctic and a high degree of cooperation in the International Decade of Ocean Exploration, which begins in 1970.

If Congress authorizes the program, Federal agencies will kick it all off by spending up to $30 million on the five projects in fiscal 1971. With normal growth, total spending on the five-point proposal would run upwards of $200 million by fiscal 1975.

Congress would also have to enact legislation to establish a national coastal development policy and to authorize a Federal grant-in-aid program to help states run their coastlines.

"The states are pivotal to solving our coastal problem," said Dr. Edward Wenk Jr., the National Marine council's executive secretary, who outlined a part of the five-point marine program to the press. "We need the states to help us manage our ports, our fisheries, our waste disposal, conservation—you name it, they're all part of the same thing."

To help the 21 coastal states manage their coastlines, the administration also called for the construction of new coastal laboratories "to develop a basic understanding of our 13,000-mile coastline."

"We want to know what's there," explained Dr. Wenk, "and then we want to find out what's happening to it."

The third proposal is to set up a pilot study of lake pollution, by deliberately polluting a large lake (of several hundred square miles) and then attempting to clean it up by chemical, thermal, mechanical and biological means. This is the program designed to study the feasibility of restoring the badly polluted Great Lakes.

"This will be difficult," Dr. Wenk conceded, "but we have to start somewhere. These things can't wait."

The administration would also seek funds to support the International Decade of Ocean Exploration, a 10-year project of the 1970's that was actually put forth by the U.S. more than a year ago.

Some funds have already been authorized on this project, Dr. Wenk said, but still more would be sought to step up research of the oceans to find how man is polluting them and how he can cut down that pollution.

The fifth of the five projects is one to intensify marine research in the Arctic, where oil, gas and mining exploration are on the increase and where pollution will present a special problem because of the intense cold.

"Initial emphasis will be on strengthening and broadening Arctic research," Dr. Wenk said. "Consideration will also be directed to formulating an overall policy framework for Arctic-related activities."

COASTAL AREA AID IS URGED BY NIXON—FIVE-POINT PLAN PROPOSED FOR EMPHASIS IN FIRST YEAR

(By Harold M. Schmeck, Jr.)

WASHINGTON, October 18.—The Nixon Administration proposed today a major program to cope with the most urgent national problems that stem from use and abuse of the lakes, coasts and seas.

The proposal listed five areas that have been selected for "immediate special emphasis in the next fiscal year." The emphasis would be expected to cost the Government $25-million to $30-million during the first year and larger sums thereafter.

The areas given top priority involve proper management and protection of the coastal zones and Great Lakes; contributions to long-range oceanic research, and special study of the Arctic region, where major oil and gas developments are expected.

The new plan was described as the first tangible by-product of a report made last January by the National Commission on Marine Science, Engineering and Resources after two years of study.

MAJOR EFFECTS SEEN

That commission, led by Dr. Julius A. Stratton, chairman of the Ford Foundation, said that the nation's use of the sea in the decades ahead would profoundly affect American security, prosperity and influence in the world.

The commission made over 100 specific proposals, some of which are reflected in the plan announced today by the National Council on Marine Resources and Engineering Development.

Today's announcement was made under the name of Vice President Agnew, chairman of the council. During a briefing earlier, Dr. Edward Wenk Jr., the council's executive secretary, said that only items of clear and present urgency had been chosen for special emphasis now.

THE FIVE-POINT PLAN

Dr. Wenk said the proposed five-point program had been submitted to the President and approved. The announcement listed the five points of the proposal as follows:

1. A new Federal policy would be established to promote the rational development of coastal areas and the Great Lakes, with a grant program to aid states to plan and manage activities along the coast. The Federal grants would be linked to matching state contributions.

The program would be designed to insure that rapid development did not destroy limited coastal land and water resources. All competing interest in the coastal regions would have to be considered.

2. Coastal marine laboratories would be established to accelerate environmental research needed for effective management of coastal activities. These laboratories, to be supported by the Federal Government, would develop basic understanding of the coastal zone and would try to assess and predict the impact of pollution and man's use and alteration of the coastal land on coastal ecology.

3. A pilot technological study of lake pollution would be undertaken to guide restoration of the Great Lakes. A lake of manageable size would be chosen; perhaps one with an area of a few hundred square miles. Existing technology for halting pollution and undoing past damage would be tested.

4. Funding would be provided for a major United States contribution to the International Decade of Ocean Exploration scheduled for the 1970's. This international effort was proposed by the United States and endorsed by the United Nations General Assembly in December, 1968.

5. Arctic research activities would be intensified, both to permit fuller use of this rapidly developing area and to insure that such activities did not inadvertently degrade the Arctic environment. The proposal calls for the program to be directed to such things as the influence of the polar icecap on global weather and climate, the balance of life in the Arctic and the effect of Arctic conditions on human behavior and physiology. Scientists believe the Arctic is an important key to world climate.

President Nixon requested the study in February after the Commission on Marine Science submitted its report. Among its recommendations, that commission suggested the establishment of a huge new Federal unit to be called the national oceanic and atmospheric agency.

It was suggested that this organization would be the focus and marshaling force for a national effort and that it would absorb several major government units such as the Environmental Sciences Service Administration, the Coast Guard and the Bureau of Commercial Fisheries. The proposal to set up the agency is being evaluated by the President's Advisory Council on Executive Organization.

OCEANS' GREAT AGE

(By Roger Revelle)

(NOTE.—Now Richard Saltonstall professor of population policy in the faculty of public health at Harvard University and director of the Harvard Center for Population Studies, Revelle was for many years director of the Scripps Institution of Oceanography. His article is excerpted by permission from Scientific American.)

I grew up not far from the ocean and have lived most of my adult life near the seashore. The ocean holds me in an enduring spell. Part of the spell comes from mystery—

the fourfold mystery of the shoreline, the surface, the horizon and the timeless motion of the sea.

The thin, moving line between land and water on an open coast presents a nearly impenetrable wall. The ships and fishing boats I watch from my living room window exist in a separate world, as remote as another planet.

Below the surface there is a multitude of living things, darting and watching, living and dying; theirs is an alien world I cannot see and can hardly imagine.

At the horizon, where my line of sight touches the edge of the great globe itself, I watch ships slowly disappear, first the hulls and then the tall masts, bound on voyages to unknown ports 10,000 miles away. From beyond the horizon come the waves that break rhythmically on the beach, sounding now loud, now soft, as they did long before I was born and as they will in the far future. The restless, ever changing ocean is timeless on the scale of my life, and this also is a mystery.

Part of the ocean spell comes from the interplay of light and reflection between the sea and the sky, the track of sunlight on the water and the pale or rosy colors of clouds. It was these that fascinated the greatest of all English painters, J. M. W. Turner, and inspired part of Debussy's tone poem "La Mer."

The ocean has an impact on all our senses: the unique sea smell, the crashing sound of breakers, the glitter of waves dancing under the sun and the moon, the feel of spindrift blowing across one's face, the salty, bitter taste of the water. Yet the spell of the ocean is more than mystery and sensory delight. Part of it must come from outside the senses, from half-forgotten memories and images beyond imagining, deep below the surface of consciousness.

Being an oceanographer is not quite the same as being a professional sailor. Oceanographers have the best of two worlds—both the sea and the land. Yet many of them, like many sailors, find it extraordinarily satisfying to be far from the nearest coast on one of the small, oily and uncomfortable ships of their trade, even in the midst of a vicious storm, let alone on one of those wonderful days in the tropics when the sea and the air are smiling and calm.

I think the chief reason is that on shipboard both the past and the future disappear. Little can be done to remedy the mistakes of yesterday; no planning for tomorrow can reckon with the unpredictability of ships and the sea. To live in the present is the essence of being a seaman.

The work of an oceanographer, however, is inextricably related to time. To understand the present ocean he must reconstruct its history, and to test and use his understanding he needs to be able to predict—both what he will find by new observations and future events in the sea.

Over the past two decades, there has been a marvelous increase in our understanding of the geological history of the ocean. This has come about chiefly through wide-ranging exploration of the earth under the sea by investigators of many countries, using a variety of new instruments and powerful new methods. I believe that in times to come these 20 years when men gained a new level of understanding of their planetary home will be thought of as one of the great ages of exploration.

In the wealth of new knowledge, there is no discovery more paradoxical than this: the ocean floor is younger than the ocean. Below the ancient waters, the sediments and the underlying rocks are constantly renewed. An almost continuous ridge 40,000 miles long and several hundred miles wide, rifted along much of its length by deep valleys and broken by numerous fractures, lies in the central part of the oceans—a structure on the same planetary scale as the oceans and continents themselves. Magnetic, thermal and seismic observations show that near the summit of the ridge, new rock wells up from the mantle below and slowly moves outward across the ocean basins. Along some margins of the ocean, the spreading ocean floor moves the adjacent continents; elsewhere the floor plunges downward in deep trenches and disappears into the earth's interior.

The simplicity and grandeur of this hypothesis of sea-floor spreading has caught the imagination of earth scientists throughout the world. As a result, as Sir Edward Bullard says: "We are in the middle of a rejuvenating process in geology comparable to the one that physics experienced in the 1890s and to the one that is now in progress in molecular biology."

A NEW FREEDOM

In this same brief period, in pursuit of both scientific and economic or military objectives, man has acquired a new freedom of operation in the third dimension of the ocean.

Below the forbidding mystery of the surface, developing technology gives access to greater and greater depths and to the resources awaiting discovery and exploitation there. Offshore wells now supply a fifth of the world's oil and gas. The value of their output is already equal to half the product of the fisheries and to a fourth of the value of the services rendered by the freighters and tankers that ply the sea lanes.

Anticipation of still greater yields has brought an ominous extension of claims of national sovereignty. Beyond the narrow limits of the territorial sea, established by the range of cannon in earli days, the 1958 Geneva Convention on the Continental Shelf gives a coastal state the exclusive right to exploit the seabed out to a depth of 200 meters or "beyond that limit, to where the depth of the superjacent waters admits of the exploration of the natural resources of the said area."

Some international lawyers have interpreted this provision to mean that as deep-water technology advances, the coastal states will be able to extend eir jurisdiction out to the midpoint of the ocean basins. The long-run consequences of such a division of the ocean into national territories are appalling to contemplate. They would constitute a *reductio ad absurdum* of the concept of nation-states.

Even today, the ocean both divides and links the nations of mankind. In the past, the fate of many peoples was shaped by the sea.

The list of these peoples includes the Phoenicians, who are said to have been the first seamen to dare to sail at night, guided by the North Star; the sea kings of Crete; the Athenians; the Norsemen of the Middle Ages and their nearly antipodal contemporaries the Polynesians; the Genoans and Venetians of the late Middle Ages; the Portuguese, the Spaniards and the Dutch during the Renaissance, and the English from the 16th to the 20th centuries.

All the sea peoples shared several characteristics. In the beginning, their populations were small and their lands were poor. If they were to prosper, it had to be by commerce trade, or by finding new lands to conquer and colonize. All were courageous, ingenious, rapacious and ruthless. All were filled with a spirit of curiosity and a drive for discovery, and this was probably their unique quality.

Although some of them built great empires, none lasted in any real sense for more than a few hundred years. Their home resources were inadequate to maintain the burdens they had assumed, and the overseas outposts were without roots and unstable.

Although ships are always feminine and many of them have been named after women, the ocean world is preeminently a masculine one. Sailors talk a good deal about the lovely, pliant girls they are going to visit in the next port, and mermaids, sea nymphs and sirens have filled their fantasies, but they usually take a dim view of women on shipboard. Because the ocean is a cruel mistress, she demands the masculine virtues of courage and strength rather than the feminine ones of compassion and sensitivity. From a human standpoint, therefore, the ocean is only a half-world and this fact has profoundly affected men's relationships to the sea.

THE SEA AND HISTORY

The relationship between nations and the sea has often been described in terms of national sea power.

The American naval theorist Alfred Thayer Mahan, in his classic work "The Influence of Sea Power Upon History, 1660–1783," held that the sea power of a state rested on three things: the production of manufactured goods in the home country for overseas trade; commerce across the seas in its own ships, and colonies or dependent states on the farther shore to provide safe ports and goods for exchange, usually raw materials to be brought back to the home country for fabrication into finished products.

The function of a navy was to advance all three elements of sea power. By dominating the sea, the navy protected the homeland from invasion and ensured that wars would be fought on other people's territory while production proceeded unimpeded at home. The navy guarded the nation's merchant ships and drove the ships of other nations off the ocean. It helped in the acquisition of colonies and ensured their subsequent docility by transporting and supplying troops and administrators and by preventing other states from interfering in these activities.

In the long periods of maritime peace imposed by the supremacy of Roman and English sea power, the sea became a medium for unifying civilization. As Sir Kenneth Clark has observed, if you had visited the public square of any Mediterranean town in the first century A.D.—in Greece, Italy, France, Asia Minor or North Africa—you would hardly have known where you were, any more than you would in a modern airport. Thus in the 18th and 19th centuries did English sea power protect the development of a new civilization around a larger ocean—the Atlanta civilization, which we are still building today.

What meaning does sea power hold for the modern world? Mahan's concepts seem outmoded in an age when superpowers can destroy each other by pushing the right buttons, when colonies have disappeared and when the North Vietnamese can laugh in the teeth of the most expensive navy the world has ever seen.

A new kind of sea power, which Mahan would scarcely recognize, now holds the center of the stage. The growing vulnerability of land-based intercontinental ballistic missiles under the impact of new weapons developments makes mutual deterrence in the balance of nuclear terror hinge increasingly on the atomic-powered submarines, armed with ballistic missiles, with which the U.S.S.R. and the United States confront each other under the seas. In part because of the effectiveness of this deterrent, the traditional uses of sea power appear to have become obsolete.

For the foreseeable future, a general war in Europe, which would require the U.S. Navy to protect vast ocean shipments of men and materials, seems the unlikeliest of possibilities. Navies, if they are to be for other purposes, will be employed only in small wars, of which unhappily there seems to be an abundance in this bitter second half of the 20th century, and to maintain the peace, wherever possible, along the coastlines of the world.

THE ULTIMATE RECEPTACLE

From a scientific point of view, there are many properties of the oceans and of sea water that combine to determine the relationships between man and the sea. The most

obvious are the oceans' vast area, great depth and huge volume.

Sea water is the most abundant substance accessible to man, and all the continents are islands in the midst of the world-girdling sea. The periphery, or shoreline, of the oceans is several times longer than it would need to be if the waters were contained in a simple circular basin. This long shoreline gives many peoples access to the sea and enables them to enjoy its benefits. More important, the shoreline allows relatively easy access to vast areas of the land. In the words of Mahan, "the powers ruling the sea are always near any country whose ports are open to their ships."

The fluid character of water on our planet is the miracle that makes life possible, but it also means that the oceans fill all the low places of the earth. Because of this geographical fact, the oceans are the ultimate receptacle of the wastes of the land, including the wastes that are produced in ever increasing amounts by human beings and their industries.

The relatively high density and low viscosity of sea water are the essential qualities that make the sea surface a broad and easily traveled highway. In technical terms, the water provides a high lift-drag ratio to the ships that float on it; consequently large ships and heavy cargoes can be moved fairly rapidly across the ocean with comparatively little motive power. Maritime commerce would be impossible if sea water were as viscous as molasses, and the fuel required to carry the huge cargoes of modern ships would be prohibitively expensive if the water were as light as air.

At the same time, the combination of low viscosity and high density gives rise to the principal hazard of the sea, the giant wind-waves caused by storms that crush small ships and fiercely attack coastal structures. If the water were much more viscous, the wind could not build up high, steep waves, and if it were much lighter, the wave force would be insignificant.

The high density and fluidity of the water create a serious difficulty when men attempt to lower themselves or their equipment deep below the surface: the enormous hydrostatic pressure at great depths, which crushes all but the strongest vessels, forms air pockets in submarine cables and produces high stresses in equipment made of materials with different compressibilities.

From the human standpoint, the saltiness of sea water is its most undesirable quality. Because of its high salt content, men can neither drink it nor use it to water their crops. The ionized salts make the water a good conductor of electricity, with the result that the ocean can be penetrated for only a short distance by radio waves and electrolytic reactions between dissimilar metals or compounds proceed very rapidly.

Sea water is much less transparent to visible light than air is, but it is more transparent than most other substances. This intermediate transparency, combined with a high heat capacity and a high rate of vaporization, makes the ocean the regulator in the great thermal engine of the ocean and the atmosphere. Most of the energy of sunlight passes virtually unimpeded throughout the atmosphere into the ocean, where it is absorbed and transformed. Nearly a third of all solar energy reaching the earth's surface goes to evaporate sea water.

The thermal inertia of the sea, the circulation of the water and the geographic distribution of ocean and land profoundly influence our planet's weather and climate.

LIFE IN THE SEA

The moderate transparency and high density of sea water, and the great depth of the ocean, give life in the sea a very different character from that on land.

Photosynthesis can take place only in the waters near the surface where bright sunlight penetrates, and consequently marine plants in the open ocean cannot support themselves on solid ground. Most marine plants have solved this problem by being extremely small, so that they have a large surface-to-volume ratio and sink or rise slowly through the water. To maintain their small size they have a short life-span, measured in hours or days rather than in the seasons or centuries that characterize land plants. Consequently, although the total production of organic matter in the most fertile regions of the ocean is higher than that in fertile land areas, the biomass of marine plants at any one time is small.

The animals of the sea have been forced to adjust themselves to this regime of the plants, with the result that the food web in the sea is much more complex than on land and the animals that can be utilized by man make up only a small part of the organic production of the ocean. The plants themselves are present in such low concentration that they cannot be economically harvested.

The potential harvest of human food from the sea is still far from being realized by human beings. Yet it will never be possible for men to obtain more than a fraction of their food requirements from the ocean.

From the biologist's point of view, one of the most important characteristics of the ocean is its great age, even on a geologic time scale. Time has been available for the evolution of many different forms of life. As a result, living things in the sea present an incredible diversity. Some 200,000 species have already been identified and new ones are found on every oceanographic expedition. Some of these are "living fossils" from the ancient past and others have evolved recently.
